

Contents

Preface	vii
List of Abbreviations	xv
1 The Basics of Translation	1
2 Historical Milestones	5
3 Methods to Study Structure	12
3.1 Low resolution methods	13
<i>Assembly</i>	13
<i>Surface accessibility to enzymes and chemical modifications</i>	13
<i>Proximity information by chemical and spectroscopic methods</i>	14
<i>Electron microscopy</i>	15
<i>Neutron scattering</i>	16
<i>Tritium bombardment</i>	17
<i>Mass spectrometry</i>	17
3.2 High resolution methods	17
<i>Nuclear magnetic resonance</i>	17
<i>X-ray diffraction</i>	18
4 The Message — mRNA	21
4.1 The genetic code	21
4.2 Transcription	23
4.3 Processing of the transcribed RNA	23
4.4 Reading frame and usage of the genetic code	24

5 The Adaptor — tRNA	27
5.1 Structure	27
5.2 tRNA conformations when bound to the ribosome	30
5.3 Synthesis	31
5.4 Codon-anticodon relationships	32
5.5 Charging — the tRNA synthetases	32
<i>Classes and subclasses</i>	33
<i>Amino acid recognition: not a simple matter</i>	35
<i>Deviations</i>	36
<i>Editing</i>	37
6 The Workbench — Ribosomes	38
6.1 The composition of ribosomes	38
6.2 rRNA	39
6.3 Ribosomal proteins	42
<i>The identification and number of ribosomal proteins</i>	42
<i>Copy number of ribosomal proteins</i>	46
6.4 The assembly of ribosomes	46
7 The Structure of the Ribosome	47
7.1 Early studies of the structure of ribosomal subunits and ribosomes	47
7.2 Crystal structures of ribosomes	49
<i>Some steps in the history of ribosome crystallography</i>	49
<i>The small subunit</i>	51
<i>The large subunit</i>	52
<i>The 70S ribosome</i>	54
<i>The inter-subunit bridges</i>	54
7.3 The structures of the ribosomal RNA molecules	56
7.4 The structures of ribosomal proteins	58
<i>Relationships between ribosomal proteins</i>	59
<i>Protein-RNA interactions</i>	61
<i>Some specific proteins</i>	63
S1	63
S12	64
L1	65
L10	65
L12	66

<i>The P proteins</i>	70
L22	72
L25-CTC	72
8 Ribosomal Sites and Ribosomal States	75
8.1 The binding of mRNA	76
<i>The recognition of mRNA</i>	76
<i>The binding site for mRNA — the decoding site</i>	76
8.2 The tRNA binding sites	78
<i>The T-site</i>	80
<i>The A-site</i>	82
<i>A tRNA bound to the A-Sites</i>	83
<i>The P-site</i>	83
<i>The E-site</i>	84
<i>Hybrid tRNA sites</i>	85
8.3 The peptidyl transfer center (PTC)	86
8.4 The polypeptide exit tunnel	88
8.5 The GTPase binding site	91
8.6 The ribosomal states	93
<i>Free subunits and translating ribosomes, initiation</i>	93
<i>The pre- and post-translocation states</i>	94
<i>The locked and unlocked states</i>	95
<i>The restrictive and ram states</i>	96
Color Plates	P1
9 The Catalysts — Translation Factors	99
9.1 The GTPases	100
<i>The consensus elements. Nucleotide and Mg²⁺ binding</i>	105
<i>Ribosome binding</i>	107
<i>Which tGTPase should bind?</i>	107
<i>The induction of GTP hydrolysis — the ribosomal GAP</i>	108
<i>GTP hydrolysis by tGTPases</i>	110
<i>Nucleotide exchange</i>	112
9.2 Initiation factors	113
IF1	114
IF2	114
IF3	117
<i>Additional initiation factors</i>	119

9.3	Elongation factors	119
	EF-Tu	119
	Structure	121
	Ternary complexes	122
	Antibiotics targetting EF-Tu	123
	Binding of EF-Tu to the ribosome	124
	GTP hydrolysis by EF-Tu	126
	EF-Ts	128
	SelB	130
	EF-G	133
	Release of inorganic phosphate, Pi	134
	Antibiotics targetting EF-G and EF2	134
	Structure	135
	EF-G bound to the ribosome	139
	GTP hydrolysis and translocation	141
	EF-G mutants	142
9.4	Release factors	143
9.5	Ribosome recycling factor (RRF)	145
9.6	tRNA mimicry	147
9.7	Additional ribosome-binding GTPases	149
9.8	Ribosome rescue factors	151
	Tet(O)/Tet(M)	151
	Stringent response	152
	RelBE	155
	tmRNA	155
	Ribosome Modulation Factor — RMF	156
	Proteins that respond to temperature stress	157
	Protein Y — pY — RaiA	157
	RbfA	157
	CsdA	158
10	Inhibitors of Protein Synthesis, Antibiotics, Resistance	159
10.1	Inhibitors of initiation	161
	Edeine (Ede)	162
10.2	Interference with decoding. Distortion of fidelity	162
	Streptomycin (Str)	163
	Paramomycin	164
10.3	Inhibitors of Aminoacyl-tRNA Binding	164
	Tetracycline	164
10.4	Inhibitors of peptidyl transfer	165
	Puromycin (pur)	166

<i>Anisomycin</i>	166
<i>Blasticidin S</i>	167
<i>Chloramphenicol</i>	167
<i>Sparsomycin</i>	167
<i>Virginamycin M</i>	167
10.5 Inhibitors of the exit tunnel — the macrolides	168
16-membered lactone rings	169
15-membered lactone rings	170
14-membered lactone rings	170
Macrolide resistance	170
10.6 Inhibitors of translocation	171
Hygromycin B (HygB)	171
Pactamycin (Ptc)	171
Spectinomycin	172
10.7 Inhibitors of translation factors	172
Thiostrepton	172
Inhibitors binding to EF-Tu	173
Inhibitors binding to EF-G and EF2	173
11 The Process — Translation	175
11.1 The dynamics of translation and the ribosome	175
11.2 Central assays	176
11.3 Initiation	177
11.4 Elongation	181
<i>Binding of aminoacyl-RNA — decoding</i>	182
<i>Fidelity related states of the small subunit</i>	182
<i>The mechanism for decoding</i>	183
<i>Initial recognition</i>	184
<i>GTP hydrolysis</i>	186
<i>Proofreading</i>	188
<i>Peptidyl transfer</i>	189
<i>The acceptor ends and hybrid states</i>	192
<i>The main steps during aminoacyl-tRNA binding and peptidyl transfer</i>	195
<i>Translocation</i>	195
<i>Is translocation a spontaneous process inherent in the ribosome?</i>	195
<i>EF-G catalyzed translocation</i>	198
<i>The relationship between EF-Tu and EF-G</i>	202
11.5 Termination	204
11.6 Ribosome recycling	206

12 Protein Folding and Targeting	208
12.1 Folding of the nascent chain	208
<i>Trigger factor</i>	209
<i>DnaK</i>	210
12.2 Transport of the product	211
13 Evolution of the Translation Apparatus	216
13.1 Evolution of codons, tRNAs and tRNA synthetases	217
13.2 Evolutionary relationship between tRNAs and ribosomal RNAs	218
13.3 Evolutionary relationship of ribosomal proteins	219
13.4 The RNA world	221
Appendix I	223
Appendix II	229
References	231
Index	281
