

List of Chapters

Part One

Introduction

3

1 The World of the Cell

5

2 Water

27

Part Two

Protein Conformation and Function

49

3 Amino Acids and the Primary Structure of Proteins

51

4 Fibrous Proteins

75

5 The Conformations of Globular Proteins

99

6 Hemoglobin and Myoglobin: Oxygen-Binding Proteins

121

7 Enzyme Catalysis and Enzyme Kinetics

149

8 Activation of Digestive Enzymes and Coagulation Factors

195

9 The Structure of Biological Membranes

209

Part Three

The Generation and Storage of Metabolic Energy

235

10 The Design and Regulation of Metabolic Pathways

237

11 Bioenergetics: The Significance of the Hydrolysis of ATP and Other Energy-Rich Metabolites

265

12	Glycolysis	289
13	The Citric Acid Cycle	329
14	Oxidative Phosphorylation	359
15	Glycogen Metabolism, Gluconeogenesis, and the Pentose Phosphate Pathway	385
16	Fatty Acid Metabolism	421
17	Catabolism of Amino Acids and the Urea Cycle	457
18	Photosynthesis	489

Part Four

The Biosynthesis of Precursors of Macromolecules 535

19	Biosynthesis and Transport of Membrane Lipids and Formation of Cholesterol Derivatives	537
20	Biosynthesis of Amino Acids and Related Biosynthetic Processes	581
21	Nucleotide Biosynthesis	627

Part Five

Biological Information Flow 663

22	Nucleic Acids	665
23	DNA Replication	703
24	Transcription	737
25	RNA Processing	781
26	The Genetic Code and Transfer RNA	821
27	Protein Synthesis and Transport	847
28	Regulation of Gene Expression I	887
29	Regulation of Gene Expression II	939
30	Recombinant DNA Technology	975

Part Six

Molecular Biology of the Cell 1021

31	Biological Membrane Transport	1023
32	Transmission of Nerve Impulses and Signal Transduction in Sensory Systems	1049
33	Contractile Proteins and the Cytoskeleton	1077
