|                                                                                                                                       |     |
|---------------------------------------------------------------------------------------------------------------------------------------|-----|
| Preface: The Rho GTPase Family<br><i>Ed Manser</i>                                                                                    | vii |
| List of contributors                                                                                                                  | xi  |
| 1. Rho GTPases – Critical Regulators In Cell Biology<br><i>Ed Manser</i>                                                              | 1   |
| 2. Evolution of the human Rho GTPase Family: conservation and diversity<br><i>Stephanie Pellegrin and Harry Mellor</i>                | 19  |
| 3. Structural analysis of Rho protein complexes<br><i>Darerca Owen and Helen Mott</i>                                                 | 31  |
| 4. Activation of GTPases by Dock180 family of proteins<br><i>Mingjian Lu and Kodi Ravichandran</i>                                    | 73  |
| 5. RhoGAPs – regulators of Rho GTPases and more<br><i>Tom Jacobs and Christine Hall</i>                                               | 93  |
| 6. RHOA/C and the actin cytoskeleton<br><i>Yoji Kawano, Takako Kaneko-Kawano, Takeshi Yoshimura, Saeko Kawabata and Kozo Kaibuchi</i> | 113 |
| 7. Cdc42 and Rac control of the actin cytoskeleton<br><i>Cheng-Gee Koh and Louis Lim</i>                                              | 137 |
| 8. Regulation of cell-cell adhesion by RHO GTPases<br><i>Astrid Kraemer and Alpha Yap</i>                                             | 157 |
| 9. Rho proteins and vesicle trafficking<br><i>Ivan de Curtis</i>                                                                      | 191 |
| 10. The prototype RHO-associated kinase PAK1<br><i>Zhuo-Shen Zhao</i>                                                                 | 211 |
| 11. Genetic analysis of Rho function in mice<br><i>Raffaella Sordella and Jeffrey Settleman</i>                                       | 231 |
| 12. Rho proteins and the microtubule network<br><i>Christina Eng and Gregg Gundersen</i>                                              | 265 |
