

TABLE OF CONTENTS

Preface	vii
1 Introduction	1
2. Ingredients of the simplest cells	7
(<i>Prokaryotes and the sizes of their contents</i>)	
3. Bigger cells	17
(<i>Eukaryotic cells and their contents</i>)	
4. Hives of industry	29
(<i>A survey of intermediary metabolism</i>)	
5. Delights of transport	39
(<i>How the cell's contents are moved around</i>)	
6. As if standing still	49
(<i>Cellular homeostasis and regulatory processes</i>)	
7. Internal state and gene expression	57
(<i>Transcription and its control</i>)	
8. Sustaining and changing the internal state	67
(<i>The interrelationship between gene expression and the cell's current composition and functional state</i>)	
9. Responding to the environment	79
(<i>Signal processing, gene expression and internal state</i>)	

10.	The living state (<i>A characterization of 'life'</i>)	91
11.	Stability and change in DNA (<i>How genes can be altered</i>)	105
12.	The spice of life (<i>Diversity, natural selection and symbiosis</i>)	117
13.	Curriculum vitae (<i>An outline history of life on Earth</i>)	131
14.	The origin of life (<i>Some major ideas and unanswered questions</i>)	147
15.	Other worlds (<i>The possibility of extraterrestrial life</i>)	163
16.	Intelligent behaviour and brains (<i>The biological meaning of "intelligence"</i>)	179
17.	Human evolution (<i>Human intelligence and the question of human uniqueness</i>)	195
18.	Cells, brains and computers: towards a characterisation of mind	209
	Glossary and pronunciation guide	223
	Further reading	231
	Index	237
