Contents

1 Introduction to biological modelling **1**
1.1 What is modelling? 1
1.2 Aims of modelling 2
1.3 Why is stochastic modelling necessary? 2
1.4 Chemical reactions 6
1.5 Modelling genetic and biochemical networks 8
1.6 Modelling higher-level systems 16
1.7 Exercises 17
1.8 Further reading 17

2 Representation of biochemical networks **19**
2.1 Coupled chemical reactions 19
2.2 Graphical representations 19
2.3 Petri nets 21
2.4 Systems Biology Markup Language (SBML) 31
2.5 SBML-shorthand 36
2.6 Exercises 42
2.7 Further reading 43

3 Probability models **45**
3.1 Probability 45
3.2 Discrete probability models 56
3.3 The discrete uniform distribution 64
3.4 The binomial distribution 64
3.5 The geometric distribution 65
3.6 The Poisson distribution 67

3.7 Continuous probability models 70
3.8 The uniform distribution 75
3.9 The exponential distribution 77
3.10 The normal/Gaussian distribution 82
3.11 The gamma distribution 86
3.12 Exercises 88
3.13 Further reading 89

4 Stochastic simulation 91
4.1 Introduction 91
4.2 Monte-Carlo integration 91
4.3 Uniform random number generation 92
4.4 Transformation methods 93
4.5 Lookup methods 97
4.6 Rejection samplers 98
4.7 The Poisson process 101
4.8 Using the statistical programming language, R 101
4.9 Analysis of simulation output 106
4.10 Exercises 107
4.11 Further reading 108

5 Markov processes 109
5.1 Introduction 109
5.2 Finite discrete time Markov chains 109
5.3 Markov chains with continuous state space 115
5.4 Markov chains in continuous time 121
5.5 Diffusion processes 133
5.6 Exercises 135
5.7 Further reading 137

6 Chemical and biochemical kinetics 139
6.1 Classical continuous deterministic chemical kinetics 139
6.2 Molecular approach to kinetics 145
6.3 Mass-action stochastic kinetics 147
6.4 The Gillespie algorithm 149
6.5 Stochastic Petri nets (SPNs) 150
6.6 Rate constant conversion 153
6.7 The Master equation 157
6.8 Software for simulating stochastic kinetic networks 160
6.9 Exercises 161
6.10 Further reading 161

7 Case studies 163
7.1 Introduction 163
7.2 Dimerisation kinetics 163

7.3 Michaelis-Menten enzyme kinetics 168
7.4 An auto-regulatory genetic network 172
7.5 The *lac* operon 176
7.6 Exercises 178
7.7 Further reading 179

8 Beyond the Gillespie algorithm 181
8.1 Introduction 181
8.2 Exact simulation methods 181
8.3 Approximate simulation strategies 186
8.4 Hybrid simulation strategies 190
8.5 Exercises 196
8.6 Further reading 196

9 Bayesian inference and MCMC 197
9.1 Likelihood and Bayesian inference 197
9.2 The Gibbs sampler 202
9.3 The Metropolis-Hastings algorithm 212
9.4 Hybrid MCMC schemes 216
9.5 Exercises 216
9.6 Further reading 217

10 Inference for stochastic kinetic models 219
10.1 Introduction 219
10.2 Inference given complete data 220
10.3 Discrete-time observations of the system state 223
10.4 Diffusion approximations for inference 230
10.5 Network inference 234
10.6 Exercises 234
10.7 Further reading 235

11 Conclusions 237

A SBML Models 239
A.1 Auto-regulatory network 239
A.2 Lotka-Volterra reaction system 242
A.3 Dimerisation-kinetics model 243
