|----------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <i>Foreword by J. Craig Venter .....</i>                                                                                                           | <i>v</i>    |
| <i>Preface .....</i>                                                                                                                               | <i>vii</i>  |
| <i>Contributors .....</i>                                                                                                                          | <i>xiii</i> |
| PART I: INTRODUCTION                                                                                                                               |             |
| 1 History of Microbial Genomics<br><i>Hamilton O. Smith .....</i>                                                                                  | <i>3</i>    |
| PART II: BIOINFORMATICS AS A TOOL IN GENOMICS                                                                                                      |             |
| 2 Tools for Gene Finding and Whole Genome Comparison<br><i>Steven L. Salzberg and Arthur L. Delcher .....</i>                                      | <i>19</i>   |
| 3 Bacterial Genome Annotation at TIGR<br><i>Owen White .....</i>                                                                                   | <i>33</i>   |
| 4 Bioinformatics and Microbial Pathogenesis<br><i>Fiona S. L. Brinkman and Joanna L. Fueyo .....</i>                                               | <i>47</i>   |
| 5 Bacteriophage Bioinformatics<br><i>Derrick E. Fouts .....</i>                                                                                    | <i>71</i>   |
| PART III: CORE FUNCTIONS                                                                                                                           |             |
| 6 Comparative Microbial Metabolism<br><i>Karen E. Nelson .....</i>                                                                                 | <i>95</i>   |
| 7 Genomic Analysis of Membrane Transport<br><i>Ian T. Paulsen, Katherine H. Kang, Mark E. Hance,<br/>and Qinghu Ren .....</i>                      | <i>113</i>  |
| 8 Genomics-Based Analysis of the Bacterial Cell Cycle<br><i>Michael T. Laub, Harley H. McAdams, and Lucy Shapiro .....</i>                         | <i>127</i>  |
| PART IV: THE EVOLUTION OF MICROBIAL GENOMES                                                                                                        |             |
| 9 A Brief History of Views of Prokaryotic Evolution and Taxonomy<br><i>Lorraine Olendzenski, Olga Zhaxybayeva,<br/>and J. Peter Gogarten .....</i> | <i>143</i>  |
| 10 How Bacterial Genomes Change<br><i>Timothy D. Read and Garry S. A. Myers .....</i>                                                              | <i>155</i>  |
| 11 Concepts of Bacterial Biodiversity for the Age of Genomics<br><i>Frederick M. Cohan .....</i>                                                   | <i>175</i>  |

|    |                                                                                           |     |
|----|-------------------------------------------------------------------------------------------|-----|
| 12 | Coevolution of Symbionts and Pathogens With Their Hosts<br><i>Robert A. Feldman</i> ..... | 195 |
|----|-------------------------------------------------------------------------------------------|-----|

#### PART V: A SURVEY OF MICROBIAL GENOMES

|    |                                                                                                                                                                                 |     |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 13 | A Survey of Plant Pathogen Genomes<br><i>C. Robin Buell</i> .....                                                                                                               | 213 |
| 14 | Anoxygenic Phototrophic Bacteria<br><i>F. Robert Tabita and Thomas E. Hanson</i> .....                                                                                          | 225 |
| 15 | Genomics of Thermophiles<br><i>Frank T. Robb</i> .....                                                                                                                          | 245 |
| 16 | The Genomes of Pathogenic Enterobacteria<br><i>Julian Parkhill and Nicholas R. Thomson</i> .....                                                                                | 269 |
| 17 | Obligate Intracellular Pathogens<br><i>Siv G. E. Andersson</i> .....                                                                                                            | 291 |
| 18 | Low G+C Gram-Positive Genomes<br><i>Steven R. Gill</i> .....                                                                                                                    | 309 |
| 19 | Genomics of Actinobacteria, the High G+C Gram-Positive Bacteria<br><i>Stephen D. Bentley, Roland Brosch, Stephen V. Gordon,<br/>David A. Hopwood, and Stewart T. Cole</i> ..... | 333 |
| 20 | Parasite Genomics<br><i>Malcolm J. Gardner</i> .....                                                                                                                            | 361 |
| 21 | Genome Sequence of an Extremely Halophilic Archaeon<br><i>Shiladitya DasSarma</i> .....                                                                                         | 383 |

#### PART VI: APPLICATIONS OF GENOMIC DATA

|    |                                                                                                          |     |
|----|----------------------------------------------------------------------------------------------------------|-----|
| 22 | Microarrays, Expression Analysis, and Bacterial Genomes<br><i>Carsten Rosenow and Brian Tjaden</i> ..... | 403 |
| 23 | Microbial Population Genomics and Ecology: A New Frontier<br><i>Edward F. Delong</i> .....               | 419 |
| 24 | Application of Genomics to Biocatalysis and Biodegradation<br><i>Lawrence P. Wackett</i> .....           | 443 |
| 25 | Enzyme Discovery and Microbial Genomics<br><i>Robert M. Kelly and Keith R. Shockley</i> .....            | 461 |
| 26 | Integration of Genomics in the Drug Discovery Process<br><i>Jacques Ravel</i> .....                      | 485 |

|    |                                                                                                                                                   |     |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------|-----|
