Preface

vii

1. Interallelic and Intergenic Interactions

1

Interallelic Interactions 1

Intergenic Interactions 4

Totipotency 14

Pleiotropy 14

Homeostasis 15

References 17

Questions 18

2. Non-Mendelian Inheritance

19

Extranuclear Inheritance 19

Yeast Mitochondrial Genome 27

Universality of Genetic Code 27

Mitochondrial Genes and Diseases 28

Maternal Effects 29

Nucleocytoplasmic Interactions 29

Extrachromosomal Inheritance 33

Hybrid Dysgenesis 38

References 40

Questions 42

3. Genetics of Symbiosis

44

Commensalism, Mutualism, and Parasitism 44

Kingdoms of Living Organisms 44

Endosymbionts and Ectosymbionts 45

Viruses in Bacteria 45

Agrobacterium and Crown Gall Disease 45

Nitrogen-fixing Symbiosis 45

Host-parasite Interactions 49

References 52

Questions 52

4. Recombination in *Drosophila* Males

54

Complete Linkage in *Drosophila* Males 55

Female and Male Recombination in <i>Drosophila</i>	57
Pre-meiotic and Meiotic Male Recombination	58
Factors Associated with Male Recombination	59
Transmission of Male Recombination	60
Role of Cytoplasm in Male Recombination	61
Male Recombination in Homozygous Male Recombinant Lines	61
Chromosomal Aberrations and Male Recombination	62
Protein Synthesis and Male Recombination	65
Mechanism of Induced Male Recombination	66
References	67
Questions	68
5. DNA Synthesis and Sequencing	70
Synthesis of DNA on a Template	70
Synthesis of DNA Without a Template	72
Nucleotide Sequencing	74
Sequencing Human Genome	79
Chromosome Walking	84
Chromosome Jumping/Hopping	84
Chromosome Landing	86
Peptide Nucleic Acid	86
Universal Nucleoside	87
References	87
Questions	88
6. DNA Damage	89
Characteristics of Mutations	89
Classifications of Mutations	89
Spontaneous Mutations and Their Origin	101
Induced Mutations	110
Physical Mutagens	110
Chemical Mutagens	114
Detection of Mutations	123
Applications of Induced Mutations	134
Environmental Mutagenesis	134
Antimutagens	135
References	138
Questions	139
7. DNA and Non-DNA Repair	141
DNA Repair Systems in Prokaryotes	141
DNA Repair Systems in Eukaryotes	147
Non-DNA Repair	149
References	154
Questions	154
8. High Precision DNA Transactions	156
Site-specific Recombination by Phage λ	157

Initiation of DNA Replication	159
References	162
Questions	163
9. Host-Restriction and Modification	164
The <i>hsd</i> Locus	164
Host Specificity Sites	165
Forms of Methylated sites	165
Enzymatic Reaction	166
DNA Cleavage of Unmodified Complexes	167
Biological Significance of Host Restriction and Modification	167
References	168
Questions	168
10. Specialised Chromosomes	169
B-chromosomes	169
Polytene or Polynemic Chromosomes	172
Lampbrush Chromosomes	173
Yeast Artificial Chromosomes	174
References	176
Questions	176
11. Gene Structure and Colinearity	177
Concept of Gene	177
Types of Genes	184
What is a Gene?	194
Overlapping and Nested Genes	195
The Smallest Known Gene	196
Colinearity	197
References	200
Questions	200
Numericals	201
12. Split Genes	204
Classification of Introns	204
The Case of <i>Pyruvate Kinase</i> Gene	205
Functions of Introns	206
Associative and Divisive Introns	206
Transposon Hypothesis of Origin of Introns	210
Why are the Eukaryotic Genes Split?	211
Evolution of Split Genes	214
References	216
Questions	217
13. Genome Organisation	219
Prokaryotic Genome	219
Eukaryotic Genome	220
Redundant/Repetitive Genes	223
Retroviruses and Transposable Elements	226

Fold-back Elements of <i>Drosophila</i>	228
References	229
Questions	230

14. Gene Amplification

231

Amplification During Differentiation and Development	231
Amplification by Selection	232
Amplification and Tumorigenesis	234
Amplification of Transferred Genes	235
Arrangement of Amplified Chromosomal DNA	236
Random vs Directed Gene Amplification	237
References	238
Questions	238

15. Genetic Control of Function

239

Relationship Between Gene and Enzyme	239
Genetic Control of Biochemical Reactions	239
Relationship Between Genotype and Phenotype	241
One Gene-one Enzyme Hypothesis	243
One Gene-one Polypeptide Hypothesis	245
One Cistron-one Polypeptide Hypothesis	246
One Gene-one Primary Cellular Function Hypothesis	246
Pseudogenes	247
References	247
Questions	248

16. Gene Expression and Its Analysis

249

Central Dogma and Its Reversal	249
Gene Expression	250
RNAs: Their Processing and Functions	253
Self-splicing of rRNA in <i>Tetrahymena</i>	262
Genetic Code	263
Transcriptional Elements	269
Synergistic Gene Expression	270
Environmental Effects and Gene Expression	276
Hormones and Gene Expression	279
Penetrance and Expressivity	280
Phenocopies	281
Alternative RNA Splicing	282
Gene Silencing	283
References	285
Questions	288

17. Genetic Control of Protein Synthesis

290

Translation in Prokaryotes	290
Translation in Eukaryotes	295
Fate of Completed Proteins	300
Protein Targeting	300

Protein Secretion	301	
Molecular Chaperone	304	
References	304	
Questions	305	
18. Gene Regulation in Prokaryotes		306
Terminology of Gene Regulation	306	
Mechanism of Gene Regulation in Prokaryotes	308	
Antisense RNA in Prokaryotic Gene Regulation	319	
Prokaryotic Gene Regulation by DNA Rearrangements	322	
Alternative Sigma Factors	324	
References	326	
Questions	327	
19. Gene Regulation in Eukaryotes and Models of Gene Regulation		329
Is Operon Concept Applicable to Eukaryotes?	329	
Short-term Versus Long-term Regulation	329	
Mechanisms of Gene Regulation in Eukaryotes	330	
Gene Regulation by Hormonal Action	331	
DNA Methylation and Gene Regulation	333	
Gene Control Levels in Eukaryotic Cells	339	
Models of Gene Regulation	344	
Transcriptional Initiation in Mammalian Genes	352	
CAT- and TATA-binding Transcription Factors	353	
Antisense RNA Strategies in Eukaryotes	355	
Molecular Zippers in Gene Regulation	358	
Regulation of Gene Expression by Small Molecules	358	
Histones as Repressors of Gene Expression	359	
Eukaryotic Gene Regulation Through DNA Rearrangements	360	
Artificial Gene Repressors	363	
Specificity in Eukaryotic Gene Transcription	364	
References	367	
Questions	369	
20. Genetic Engineering		370
Restriction Endonucleases	370	
Gene/DNA Cloning	372	
Gene Transfer Methods	374	
Chromosome Walking/Jumping Libraries	378	
Minisatellites and Microsatellites	381	
Polymerase Chain Reaction	382	
Transposon-mediated Gene Transfer	385	
High Density Molecular Maps	386	
DNA fingerprinting	386	
LOD Score	387	
Applications of Genetic Engineering	387	
Hazards of Genetic Engineering	388	
Gene Targeting	388	

Transgenic Plants	392	
Transgenic Animals	396	
Expression and Stability of Genetically Engineered Genes	399	
Genetically-Modified Food	400	
Gene Chip Technology	401	
References	401	
Questions	404	
21. Gene Patenting		406
Requirements of Patentability	406	
What Can be Got Patented?	406	
Patenting—an International Activity	407	
Requirements for Depositing a Culture	407	
Patenting the Life Forms	407	
Selling the Sequences	408	
Property Rights	408	
Controversies on Genetic Manipulations	409	
Patenting and Agricultural Industry	409	
Economic Gains	410	
Impact of Patenting on Less Developed Nations	411	
Proposed Amendments on Patents Act, 1970	411	
References	411	
Questions	411	
22. Mapping Quantitative Trait Loci		413
Reasons for locating QTLs	414	
Linkage of a Quantitative Trait to a Major Gene	414	
Principle of QTL Mapping	415	
Advanced Backcross QTL Method	416	
Mapping QTLs with MAPMAKER	416	
Usefulness of QTL Mapping	417	
Limitations of QTL Analysis	418	
Fine Mapping of QTL	418	
QTL Meta-analysis	418	
References	419	
Questions	423	
23. Immunogenetics		424
Immunoglobulins	424	
Human Leukocyte Antigens	432	
Vaccines	435	
References	441	
Questions	442	
24. Genetic Disorders in Man		444
Genetic Basis of Disorders	445	
Disorders due to Mutations	446	
Diagnosis and Carrier Detection	449	

Somatic Cell Hybridization	451	
Treatment for Inherited Diseases	453	
Gene Therapy	454	
References	457	
Questions	459	
25. Oncogenes and Antioncogenes		460
Retroviruses contain Oncogenes	460	
Proto-oncogenes	460	
<i>src</i> Oncogene	461	
Origin of Oncogenes	463	
Identification of an Oncogene	463	
Fine Structure of an Oncogene	464	
Activation of Proto-oncogenes	465	
A Model of Carcinogenesis	466	
Evidences Supporting Pall's Model	467	
Antioncogenes	469	
References	471	
Questions	471	
26. Sex Determination, Dosage Compensation and Sex Differentiation		473
Sex-determination	473	
Noncoding DNA as Hypothesis for Sex-determination	476	
Dosage Compensation	480	
Sex Differentiation	485	
Events in Sex Determination	485	
Human Sex Anomalies	485	
References	486	
Questions	488	
27. Epigenetics and Morphogenesis		489
Epigenetic Patterns	489	
Mutations and Epimutations	493	
Cellular Transformation	493	
Chromosome Imprinting	494	
Epigenetic Defects and Ageing	494	
DNA Methylation in Plants	496	
Molecular Morphogenesis	497	
Common Coding motifs	503	
Homeotic Genes in Flower Development	504	
References	507	
Questions	508	
28. Origin of Prokaryotic and Eukaryotic Cell		510
Organic Evolution	510	
What is Life?	512	
Theories of Origin of Life	512	
Mechanism of Origin of Life on Earth	513	

Evolution of Eukaryotes	520
Theories on the Origin of Eukaryote Cells	523
Evolution of Sexual Reproduction	524
References	524
Questions	525

29. Process of Evolution

527

Lamarck's Theory of Evolution	527
Theory of Natural Selection	528
Mutation Theory of Evolution	529
Modern Synthetic Theory of Evolution	529
References	538
Questions	539

30. Molecular Evolution

541

Biological Species Concept	541
Genetics of Reproductive Isolation	542
Genetic Distance	542
An Era of Molecular Biology	544
Evolutionarily Important Genes	544
Molecular Evolutionary Clock	545
Genome Organization and Evolution	549
Selfish DNA	551
Molecular Drive	552
Proteome	553
Cryptic Variation	553
Establishment of New Patterns of Gene Control	553
Epochs of Molecular Evolution	554
References	554
Questions	555

31. Genomics

557

Assigning Function to a Gene	558
Tools to Study Functional Genomics	558
Potential Applications of Functional Genomics	566
References	567
Questions	567

Glossary	569
Author Index	627
Subject Index	641
