<i>List of Abbreviations</i>	xx
 <i>Chapter 1. Definition and classification of lipids</i>	 1
1.1. Hydrocarbons	2
1.1.1. Normal, saturated paraffins	3
1.1.2. Monobranched-chain paraffins	3
1.1.3. Multibranched paraffins: saturated isoprenoids (isopranes)	3
1.1.4. Normal, mono-unsaturated paraffins (monoenes)	5
1.1.5. Normal, polyunsaturated hydrocarbons (polyenes)	5
1.1.6. Monobranched, unsaturated paraffins	5
1.1.7. Isoprenoid polyenes	6
1.1.8. Carotenoids	6
1.2. Alcohols	8
1.2.1. Normal, saturated alcohols	8
1.2.2. Monobranched-chain alcohols	8
1.2.3. Multibranched alcohols: saturated isoprenoids (isopranols)	10
1.2.4. Unsaturated alcohols	10
1.2.5. Isoprenoid alcohols (terpenols or polyprenols)	11
1.2.6. Sterols	12
1.2.7. Vitamin alcohols	14
1.2.8. Long-chain polyols	16
1.3. Long-chain amino alcohols	16
1.4. Aldehydes	18
1.4.1. Normal, saturated aldehydes	19
1.4.2. Unsaturated aldehydes	19
1.4.3. Cyclopropane fatty aldehydes	19
1.4.4. Isoprenoid aldehydes	19

1.5. Ketones and quinones	20
1.5.1. Methyl ketones	21
1.5.2. Symmetrical ketones	21
1.5.3. Unsaturated, branched, and/or cyclic ketones	21
1.5.4. Diketones	22
1.5.5. Quinones with isoprenoid side chains	22
1.6. Fatty acids	23
1.6.1. Normal, saturated acids	23
1.6.2. Monobranched saturated acids	23
1.6.3. Multibranched acids; saturated isoprenoid acids	24
1.6.4. Cyclopropane and cyclopropene fatty acids	26
1.6.5. Cyclopentene fatty acids	27
1.6.6. Normal, monoenoic acids	30
1.6.7. Polyenoic acids	30
1.6.8. Acetylenic acids	33
1.6.9. Hydroxy acids	34
1.6.10. Keto acids	35
1.6.11. Dicarboxylic acids	36
1.6.12. Prostaglandins, prostacyclin and thromboxanes (prostanoids)	36
1.6.13. Furanoid fatty acids	38
1.7. Waxes	39
1.7.1. Simple waxes	39
1.7.2. Complex waxes	40
1.8. Esters of sterols and vitamin alcohols	40
1.8.1. Sterol esters	40
1.8.2. Vitamin alcohol esters	42
1.9. Esters of polyhydric alcohols	43
1.9.1. Acyldiols (diol esters)	43
1.9.2. Acylglycerols (glycerides)	44
1.10. Ethers of polyhydric alcohols	45
1.10.1. Diol ethers	45
1.10.2. Glycerol ethers	48
1.11. Phospholipids (phosphatides)	51
1.11.1. Glycerophosphatides	51
1.11.2. Sphingosyl phosphatides	58
1.11.3. Diol phospholipids	59
1.12. Glycolipids	60
1.12.1. Glycosyl diacylglycerols; glycolipids	60
1.12.2. Glycosides of hydroxy fatty acids	64
1.12.3. Acylated sugar derivatives	65
1.12.4. Glycophospholipids	66
1.12.5. Phosphoglycolipids (in Gram-positive bacteria)	66
1.12.6. Lipoteichoic acid or membrane teichoic acid	68
1.12.7. Glycerophosphoglycolipid derivatives of dibiphytanyl diglycerol tetraether	68
1.12.8. Phytoglycolipid (plants)	69

1.12.9. Lipopolysaccharides (in Gram-negative bacteria)	69
1.12.10. Steryl glycosides	70
1.12.11. Neutral glycosphingolipids (ceramide hexosides; 'cerebrosides')	70
1.12.12. Gangliosides	72
1.13. Sulfur-containing lipids	73
1.13.1. Long-chain diol sulfates and halogenated derivatives	73
1.13.2. Glycosphingolipid sulfates (cerebroside sulfates)	73
1.13.3. Glycoglycerolipid sulfates	74
1.13.4. Sulfated trehalose acyl esters	74
1.13.5. Sterol sulfates	75
1.13.6. Sulfoglycosyldiglyceride (SQD)	75
1.13.7. Deoxyceramide sulfonic acid	75
1.13.8. Sulfonium analog of phosphatidylcholine	76
1.14. Amino acid-containing lipids	77
1.14.1. N-Acyl amino acids and ester derivatives	77
1.14.2. O-Acyl carnitines	78
1.14.3. Peptidolipids	78
1.14.4. Homoserine-derived lipid	79
 <i>Chapter 2. Materials and equipment</i>	 80
2.1. Solvents	80
2.2. Reference compounds	83
2.3. Glassware	83
2.3.1. Pipets and microsyringes	87
2.3.2. Tubes	88
2.3.3. Combination hydrolysis and extraction flask	88
2.3.4. Weighing flasks	90
2.4. Evaporators	90
2.4.1. Evaporation in a stream of nitrogen	90
2.4.2. Rotary evaporators	91
2.5. Analytical instruments	95
2.5.1. Colorimeters	97
2.5.2. Visible-ultraviolet recording spectrophotometers	98
2.5.3. Infrared recording spectrometer	98
2.5.4. Nuclear magnetic resonance (NMR) spectrometer	98
2.5.5. Mass spectrometer	98
2.5.6. Polarimeter	99
2.5.7. Spectropolarimeter	99
2.5.8. Gas-liquid chromatograph (GLC)	99
2.5.9. High-performance liquid chromatograph (HPLC)	99

<i>Chapter 3. Lipid extraction procedures</i>	100
3.1. General precautions	100
3.2. Extraction of animal tissues	103
3.3. Extraction of plant tissues	104
3.4. Extraction of microorganisms	106
3.5. Extraction of cell fractions, blood cells and plasma	107
3.6. Extraction of other biological material	108
3.7. Storage of lipid extracts	109
3.8. Final purification and preparation of lipids for analysis	109
3.8.1. Removal of water-soluble contaminants	109
3.8.2. Preparation of free acid or salt forms of acidic lipids	110
<i>Chapter 4. General analytical procedures</i>	112
4.1. Dry weight	112
4.2. Phosphorus	113
4.2.1. Total-P	113
4.2.2. Phosphonate-P	115
4.3. Nitrogen	116
4.3.1. Total nitrogen (micro-Kjeldahl)	116
4.3.2. Lipid amino nitrogen	117
4.3.3. Total nitrogen by microprocedure of Sloane-Stanley (1967)	118
4.4. Ester determination	119
4.5. Total sugars	120
4.6. Iodine value	121
4.7. Total and free cholesterol	122
4.8. Total fatty acids and unsaponifiable material	123
4.8.1. Lipids containing only <i>O</i> -acyl esters	124
4.8.2. Lipids containing <i>O</i> -acyl esters and non-saponifiables	125
4.8.3. Lipids containing <i>O</i> -acyl esters, plasmalogens, and non-saponifiables	127
4.9. Neutralization equivalent	128
4.10. Plasmalogens	129
4.10.1. Long-chain aldehyde analysis	129
4.10.2. Vinyl ether determination	130
4.10.3. Vitamin A determination	131
4.11. <i>N</i> -Acyl containing lipids (sphingolipids). Fatty acid and long-chain base contents	132
4.12. Water-soluble constituents	133
4.12.1. Choline determination	134
4.12.2. Amino alcohols and amino acids	136
4.12.3. Glycerol analysis	140
4.12.4. Glycerophosphate analysis	143
4.12.5. Diol and polyol analysis	150
4.12.6. Analysis of sugars in glycolipids	153

4.12.7. Inositol determination	154
4.13. Vicinal-glycol determination	156
4.13.1. Lipids with terminal glycol groups	156
4.13.2. Total vicinal hydroxyl groups	157
4.14. Glycerol or diol ether constituents	158
4.14.1. Acetolysis procedure	158
4.14.2. Enzymatic hydrolysis	159
4.14.3. Reductive hydrogenolysis	161
4.14.4. Acid hydrolysis procedures	163
4.15. Sulfur	165
4.15.1. Total sulfur	165
4.15.2. Ester sulfate	166
4.15.3. Sulfatides	167
4.16. Spectrometric analyses	168
4.16.1. Ultraviolet-visible spectrometry	168
4.16.2. Infrared spectroscopy	169
4.16.3. Nuclear magnetic resonance (NMR) spectroscopy	171
4.16.4. Mass spectrometry	179
 <i>Chapter 5. Separation of lipid mixtures</i>	 186
5.1. Solvent fractionation	187
5.1.1. Acetone precipitation	187
5.1.2. Solvent partition (countercurrent distribution)	188
5.2. Column chromatography (Liquid Chromatography, LC)	190
5.2.1. Adsorption chromatography	190
5.2.2. Liquid-liquid partition chromatography	199
5.2.3. Ion-exchange chromatography	205
5.2.4. High-performance liquid chromatography (HPLC)	210
5.3. Chromatography on silicic-acid-impregnated paper	215
5.3.1. Impregnation of paper with silicic acid	216
5.3.2. Application of lipids to the paper	217
5.3.3. Solvent systems and chromatography chambers	217
5.3.4. Detection and characterization of lipids	219
5.3.5. Quantitative analysis of phosphatides	227
5.3.6. Chromatography on commercial silicic-acid-impregnated paper	231
5.4. Thin-layer chromatography (TLC)	232
5.4.1. Preparation of thin-layer plates	233
5.4.2. Application of lipids to the plates	237
5.4.3. Chromatographic chambers and solvent systems	237
5.4.4. Detection and characterization of lipids on TLC	239
5.4.5. Quantitative analysis of lipids on TLC plates	246
5.4.6. Preparative TLC	251
5.5. Gas-liquid chromatography (GLC)	254
5.5.1. Preparation of column packing	254

5.5.2. Column preparation	255
5.5.3. Sample introduction	260
5.5.4. Fraction collection	262
5.5.5. Qualitative analysis by GLC	265
5.5.6. Quantitative analysis by GLC	274
 <i>Chapter 6. Radioisotopic techniques in lipidology</i>	 279
6.1. Labelled compounds	279
6.1.1. Commercially available precursors	279
6.1.2. Synthesis of water-soluble labelled precursors	283
6.1.3. Preparation of labelled lipid substrates	290
6.2. Labelling of cellular lipid components	294
6.2.1. Microorganisms	294
6.2.2. Higher plants	304
6.2.3. Cell cultures	310
6.2.4. Animals	312
6.3. Fractionation and isolation of labelled components	313
6.3.1. Fractionation of ^{14}C -labelled leaf lipids	314
6.4. Counting of radioisotopically labelled lipids	317
6.4.1. End-window or gas-flow counting	318
6.4.2. Scintillation counting	319
6.5. Autoradiography and scanning of chromatograms	321
6.5.1. Autoradiography	321
6.5.2. Radioactive scanning of chromatograms	323
6.5.3. Radio-gas detection	324
 <i>Chapter 7. Identification of individual lipids and lipid moieties</i>	 326
7.1. Neutral lipids	326
7.1.1. Identification of neutral lipid classes	326
7.1.2. Hydrocarbons	335
7.1.3. Long-chain alcohols	343
7.1.4. Long-chain ketones and quinones	346
7.1.5. Long-chain aldehydes	349
7.1.6. Fatty acids	351
7.1.7. Wax esters	362
7.1.8. Acylglycerols (Glycerides)	364
7.1.9. Neutral glycerol ethers	368
7.2. Phosphatides	373
7.2.1. Glycerophosphatides	373
7.2.2. Sphingosyl phosphatides	413
7.3. Glycolipids	421
7.3.1. Glycosyl diacylglycerols	421

7.3.2. Glycosphingolipids (cerebrosides, ceramide polyhexosides and gangliosides	424
7.3.3. Phosphoglycolipids	425
<i>Appendix. Addresses of companies and suppliers mentioned in the text</i>	<i>426</i>
