

CONTENTS

SECTION I SPINAL MECHANISMS OF CONTROL

Chapter 1 Some Patterns of Behaviour

The Spinal Reflexes	6
Reflexes of Standing	9
Reciprocal Relations between Legs	10
Importance of Neck Muscles	11
Dependence on Cutaneous Input	14
Standing and Righting	16
Progression	16
References	23

Chapter 2 Skeletal Muscle and Its Activation

The Muscle Unit	24
The Motor Neurone	29
Control of Tension Development	35
Rate-Coding versus Recruitment	36
Order of Recruitment	40
References	49

Chapter 3 The Sensory Apparatus

Importance of Feedback	51
Sensory Transducers	52
Muscle and Joint Receptors	56
The Muscle Spindle	56
The Golgi-Tendon Organ	64
The Joints	72
References	73

Chapter 4 Some Basic Features of the Sensory Information

Matthews' Types A and B	75
Some Aspects of Spindle Involvement in Motor Control	78
Activation of Alpha and Gamma Neurones	81

Discharges in Articular Nerves	88
References	91

Chapter 5 Experimental Studies of Spinal Reflex Mechanisms

Ventral Root Responses to Dorsal Root Stimulation	93
Graded Stimulation of Muscle-Nerve	94
Identification of Spindle as Sensor in the Stretch-Reflex	97
Group Ia Inhibition	99
Group Ib Inhibition	100
Role of Group II Fibres in Reflex Activity	103
Dynamic and Static Components	104
The Stretch-Reflex	104
Types of Intrafusal Motor Innervation	109
Role of Fusimotor Activity	120
The Static Stretch-Reflex	121
Role of the Secondary Endings	124
Responses to Contraction of Single Muscle Units	130
Cutaneous and Joint Information and the Stretch-Reflex	132
Role of the Golgi Tendon-Organ	132
References	143

Chapter 6 The Spindle and Tendon-Organ in Control

The Silent Period	147
Co-activation of Alpha and Gamma Neurones	151
Control of Intercostal Muscles	161
General Importance of Autogenetic Inhibition	165
Stability of the Servo-Loop	167
Tremor	167
References	171

Chapter 7 Further Aspects of Inhibition

The Antidromic Inhibitory Pathway	173
Recurrent Facilitation	174
Effects of Stretch on Gamma Motor Neurones	182
The Renshaw Cell as an Integrator	182
Presynaptic Inhibition	186
Strychnine-Resistant Post-Synaptic Inhibition	196
Organization of Presynaptic Inhibition	197
References	200

SECTION II HIGHER CONTROL OF MOTOR ACTIVITY

Chapter 8 The Vestibular Apparatus and Postural Mechanisms

Supraspinal Influences	205
The Vestibular Apparatus	206
Structure and Mechanism	206
Neck Proprioception	212
Structure of the Sensitive Regions	214
Reflex Eye Movements	218
Cupula as a Torsion Pendulum	221
Single-Unit Discharges from Semicircular Canals	224
Responses in Fibres Innervating Otoliths	232
Nervous Pathways	235
Responses of Vestibular Nuclei Neurones	238
Reticular Formation	243
Integration of the Messages	246
Responses of the Motor Neurones	247
Effects of Electrical Stimulation on Waking Animal	251
Effects of Vestibular Lesions	254
Elimination of Neck Reflexes	254
Postural and Righting Reflexes	255
Stato-Kinetic Reflexes	255
Reflexes of Standing	256
Tonic Neck Reflexes	257
Tonic Labyrinthine Reflexes	258
Eye Reflexes	261
Centres for Righting Reflexes	263
Movements of Head and Eyes	263
Higher Integration of Posture	268
References	270

Chapter 9 Control by the Cerebral Cortex

Structure	274
Neuronal Organization	275
Architectonic Maps	281
General Features of Localization	283
The Sensory-Motor Cortex	283
Limitations to Interpretation of Evoked Responses	287
Cortical Stimulation in Man	289
Ablation of Motor Cortex	291

Ablation of Sensory Cortex	294
The Pyramidal Neurones and Tracts	294
Pyramidal Tracts	294
Effects of Cortical Stimulation on Motor Function	296
Some Effects of Cortical Stimulation on Spinal Reflexes	300
Intracellular Recording of Spinal Motor Neurones	306
Baboon's Forelimb Motor Neurones	306
Organization of the Cortical Motor Neurones	310
Columnar Organization	317
Organization of the Afferent Input to the Cortical Motor-Sensory Zone	322
Sensory Columns	322
Peripheral Input to Motor Column	323
Cortical Representation of Proprioception	324
Relation of Sensory Input to Motor Cortex	327
Pyramidal Tract Neurone Discharge in the Waking Animal	334
Short and Long Latency Neurones	335
Kinaesthesia and the Position-Sense	340
Involvement of Muscle Proprioceptors	340
References	347

Chapter 10 Pyramidal Lesions, Decerebrate Rigidity and the Reticular Formation

Pyramidal and Extrapyramidal Systems	353
Pyramidal Tract Lesions	353
Decerebrate Rigidity	357
Reticular Formation	358
Bulbar Inhibitory Centre	360
Lesions in the Brainstem	361
Activities of Reticular Neurones	363
Reticulospinal Neurones	363
Peripheral and Central Influences	367
Effects of Excitation of Reticular Formation	372
Flexors and Extensors	372
Mode of Reticular Control	373
Stimulation in the Intact Animal	379
References	380

Chapter 11 The Cerebellum

Anatomy	383
General Histological Features and Modes of Connexion	385

Topography and Function	389
Afferent Input	390
Spinal Input	391
Direct Spinocerebellar Pathway	391
Spino-Olivo-Cerebellar Pathway	392
Dorsal Columns	394
Reticulocerebellar Projection	394
Vestibular Input	395
Cerebral Cortical Input	396
The Sagittal Organization of the Input to the Cerebellum	396
Efferent Connexions	399
Vestibular Nuclei	399
Cortical Connexions	401
Laterality of Connexions	402
Somatotopic Organization of Cerebellar Cortex	402
Cortico-Cerebellar Relationships	403
Mechanism of Cerebellar Action	407
Synaptic Relations	408
Experimental Climbing-Fibre Stimulation	410
Parallel Fibre Stimulation	413
Action of Purkinje Cells	415
Neurones of Clarke's Column	417
Action of Nuclear Neurones	418
Experimental Activation of Cerebellar Neurones	419
Peripheral Nerve Stimulation	420
Cerebral Cortical Stimulation	420
Effects of Natural Stimuli	422
Pathways to the Roof Nuclei and Responses	429
Passive versus Active Tension in Muscles	434
Motor Effects of Cerebellar Stimulation	434
Cerebellar Lesions and Motor Neurones	439
Cortico-Cerebellar Relations	441
Mode of Operation of Pars Intermedia	450
Preprogramming of Movement	452
Behaviour of Cerebellar Neurones in Waking Animal	455
Significance of the Dual Input	455
Effect of Cerebellum on Cortical Function	457
Cerebellar Ablations	458
Threefold Function of Cerebellum	458
Phylogeny	459
Localized Ablations	463
References	465

Chapter 12 Brainstem Motor Nuclei

The Reticular Formation	472
The Inferior Olive	475
The Red Nucleus	484
References	496

Chapter 13 The Basal Ganglia

Connexions	501
Electrophysiological Studies	506
The Striatum	506
Pallidal Neurones	511
The Nigrostriatal Pathway	512
Reciprocity of Connexions and Striatocortical Pathway	516
The Transmitters	519
Acetylcholine	519
5-HT and Substance P	519
GABA	520
5-HT and Huntington's Chorea	520
Effects of Stimulation on the Basal Ganglia	520
Arrest Reaction	520
Effect on Muscle Proprioceptors	522
Chemical Stimulation	522
Unit Activity Associated with Movement	524
Pathology of the Basal Ganglia	525
Definitions	525
Substantia Nigra and Parkinsonism	527
Huntington's Chorea	529
Hemiballismus	531
Tremor	531
Experimental Lesions	533
Analogy of Basal Ganglia with Cerebellum	534
References	535

Chapter 14 Neural Organization of Locomotion

Sequence of Muscular Activity	539
EMG Records	542
Spinal Stepping	546
Locomotor Activity Induced by Electrical Stimulation	549
Descending Activity	549

CONTENTS

xi

Alternate Reflex Pathways in Cord	551
Forelimb-Hindlimb Linkage	553
Importance of Central Programming	554
Proprioceptor Activity during Locomotion	560
Coordination of Sensory and Descending Inputs	561
The Cerebellar Loop	565
Effects of Some Brain Transections	569
References	571
 SUBJECT INDEX	 575
