

CONTENTS

Preface	vii
---------------	-----

CONTROL OF CHARACTER FORMATION BY NUCLEIC ACIDS

A.	The Chemical Constitution of the Nucleic Acids	1
1.	The Building Blocks of the Nucleic Acids	1
2.	Nucleosides, Nucleotides, Polynucleotides	4
3.	The Watson-Crick Model of DNA	5
B.	Direct Evidence for the Role of the Nucleic Acids as Carriers of Genetic Information	7
1.	Transformation	7
2.	Transfection	9
C.	The Heterocatalytic Function of DNA: Transcription and Translation	10
1.	The Concept of Molecular Genetics	10
2.	The Genetic Code	11
3.	Transcription	12
4.	Translation	14
5.	Antimetabolites of Transcription and Translation	20
6.	Evidence for mRNA in Higher Plants	24
7.	Transcription and Translation in a Cell-Free System	29
8.	One Gene-One Polypeptide	30

PHOTOSYNTHESIS 35

A.	Division of Photosynthesis into Primary and Secondary Processes	35
B.	Primary Processes of Photosynthesis	36
1.	Electron Transport Chains	36
2.	Redox Systems in the Primary Processes of Photosynthesis	38
3.	Pigment Systems I and II of Photosynthesis	43
4.	Primary Processes of Photosynthesis	46
5.	Quantum Yield of Photosynthesis	48

C.	Secondary Processes of Photosynthesis.....	49
1.	The CO ₂ Acceptor.....	49
2.	The Connection with the Primary Processes.....	50
3.	The Calvin Cycle.....	51
4.	The C ₄ dicarboxylic Acid Pathway.....	53
D.	The Chloroplast: Site of Photosynthesis.....	54

CARBOHYDRATES 57

A.	Monosaccharides.....	57
1.	Phosphorylation (Kinases).....	57
2.	Intramolecular Migration of Phosphate (Mutases).....	58
3.	Sugar Nucleotides (UDPG).....	59
4.	Inversion of an OH Group (Epimerases).....	59
5.	Control of the Equilibrium Between Aldoses and Ketoses (Isomerases).....	59
6.	Oxidative Degradation of 1 C Atom (Hexose-pentose Transition).....	60
7.	The Pentose Phosphate Cycle.....	62
B.	Oligosaccharides and Polysaccharides.....	63
1.	Glycosides.....	63
2.	Oligosaccharides.....	64
3.	Polysaccharides.....	67

BIOLOGICAL OXIDATION 74

A.	Glycolysis.....	75
B.	Oxidative Decarboxylation of Pyruvate, Formation of Active Acetate.....	78
C.	Citric Acid Cycle.....	81
D.	The Respiratory Chain.....	83
E.	Mitochondria as Power Plants.....	86

FATS 89

A.	Chemical Constitution of the Fatty Acids.....	89
B.	Biosynthesis of the Fatty Acids.....	90
1.	Formation of Malonyl CoA.....	90
2.	Fatty Acid Synthesis Proper.....	91
C.	Biosynthesis of the Neutral Fats.....	93

D.	Degradation of the Fats	94
1.	β -Oxidation	95
2.	α -Oxidation	96
E.	The Glyoxylate Cycle	96

TERPENOIDS 99

A.	Chemical Constitution.....	99
B.	Secondary Plant Substances.....	100
C.	Volatile Oils.....	101
D.	Biosynthesis (General).....	102
E.	Biosynthesis (Particular)	104
1.	Monoterpenes.....	104
2.	Sesquiterpenes.....	105
3.	Triterpenes	106
4.	Diterpenes	110
5.	Tetraterpenes: Carotenoids	111
6.	Polyterpenes	115

PHENOLS 117

A.	Chemical Constitution.....	117
B.	Biosynthesis (General).....	118
1.	The Shikimic Acid Pathway.....	118
2.	The Acetate-Malonate Pathway	120
3.	Precursors and Intermediates	120
C.	Biosynthesis (Particular)	121
1.	Cinnamic Acids	121
2.	Coumarins	122
3.	Lignin.....	124
4.	Phenol Carboxylic Acids and Simple Phenols	128
5.	Flavan Derivatives.....	129
6.	Flower Pigmentation.....	136

AMINO ACIDS 138

A.	The Reduction of Nitrogen	138
B.	Reductive Amination	140
C.	The Formation of Glutamine	140
D.	Transamination.....	141
E.	The Origin of the C Skeleton of the Amino Acids.....	142

ALKALOIDS 144

A.	Derivatives of the Aliphatic Amino Acids, Ornithine and Lysine.....	146
	1. Quinolizidine Alkaloids.....	146
	2. Nicotiana Alkaloids and Nicotinic Acid	147
	3. Tropane Alkaloids	149
B.	Derivatives of the Aromatic Amino Acids, Phenlalanine and Tyrosine.....	150
	1. Amaryllidaceae Alkaloids and Colchicine.....	150
	2. Betacyanins and Betaxanthins.....	152
	3. Isoquinoline Alkaloids (Benzyloisoquinoline Alkaloids)....	153
C.	Derivative of the Amino Acid Tryptophan: Indole Alkaloids and Derivatives.....	154
D.	Purine Alkaloids.....	156
E.	Biochemical Systematics.....	157

PORPHYRINS 160

CELL DIVISION 163

A.	Development—Growth and Differentiation	163
B.	Cell Division	163
	1. The Mitotic Cycle	163
	2. The Autocatalytic Function of DNA: Replication	165
	3. Plant Tumors: Crown Galls.....	169

DIFFERENTIAL GENE ACTIVITY AS PRINCIPLE OF DIFFERENTIATION 172

A.	Totipotency	172
B.	Differential Gene Activity: The Phenomenon	174
	1. RNA Synthesis on Giant Chromosomes.....	175
	2. Phase-specific mRNA	176
	3. Phase- and Tissue-specific Protein Patterns	178

REGULATION 181

A.	States of Activity of the Gene.....	181
----	-------------------------------------	-----

B.	Regulation: Point of Departure.....	182
C.	Regulation by Internal Factors.....	183
	1. Intracellular Regulation.....	183
	2. Intercellular Regulation: Phytohormones.....	194
D.	Regulation by External Factors.....	219
	1. Temperature.....	219
	2. Light.....	220

POLARITY AND UNEQUAL CELL DIVISION AS FUNDAMENTALS OF DIFFERENTIATION 225

A.	Polarity.....	225
B.	Unequal Cell Division.....	227
	1. Development of Stomata.....	228
	2. Root Hair Formation.....	228
	3. Pollen Mitosis.....	229

CELL ELONGATION 231

A.	The Phenomenon.....	231
B.	The Process of Elongation Within a Cell.....	232
	1. The Suction Pressure Equation of the Cell.....	232
	2. The Stages of Cell Elongation.....	234
C.	Regulation.....	235
	1. Adjustment of the Equilibrium Between Division and Elongation.....	235
	2. Regulation by IAA.....	235

THE FORMATION OF SEEDS AND FRUITS 241

A.	Complex Developmental Processes and Their Regulation ...	241
B.	Formation of Seeds and Fruit.....	242
	1. The Process of Formation.....	242
	2. Regulation.....	244

GERMINATION 250

A.	Dormancy.....	250
	1. Incomplete Embryos.....	250
	2. Maturation by Drying.....	250

3. Impermeability to Water and/or Gases	251
4. Inhibitors	251
B. Conditions for Germination	252
1. Water	253
2. Oxygen	253
3. Temperature	253
4. Light	256
C. Mobilization of Reserve Materials	256
D. Assembly of the Photosynthetic Apparatus	257
E. Regulation of Germination by Photohormones	258
F. Regulation of Germination and Evolution	259

THE VASCULAR SYSTEM 263

A. The Elements	264
B. Differentiation	264
C. Function	268
1. Transport in Both Directions	268
2. Transport of the Xylem	269
3. Transport in the Phloem	277

FLOWER FORMATION 286

A. Definitions	286
B. Temperature and Flower Induction: Vernalization	287
1. Petkus Rye	288
2. Henbane (<i>Hyoscyamus Niger</i>)	290
3. <i>Streptocarpus Wendlandii</i>	292
4. A Hypothesis Concerning Vernalization	296
C. Length of Day and Flower Induction: Photoperiodism	297
1. Long and Short Day Plants, Neutral Day Plants	298
2. Analysis of Photoperiodism in Flower Induction	298
3. Photoperiodism in Flower Induction as a Sign of Adaptation	307
4. Light and Circadian Rhythms	308

BIBLIOGRAPHY	313
SOURCES OF ILLUSTRATION	319
INDEX	322
