Preface	v
To the Student	ix
Part 1 The Science and Philosophy of Biophysical Study	
Chapter 1 Introduction to the Principles and Practice of Biophysical Chemistry	3
1.1 Describe the Phenomenon: What Is Happening Here?	3
1.2 Identifying the Components of a System: Who Is Involved?	3
1.3 Analysis of Structure: What Does It Look Like?	4
1.4 Analysis of Function: What Does It Do?	4
Chapter 2 Physical Thoughts, Biological Systems: The Application of Modeling Principles to Understanding Biological Systems	8
2.1 The Gedanken Experiment	8
2.2 Physical Thoughts, Biological Systems: Modeling as the Link Between Theory, Understanding, and Reality	8
2.3 The Beginnings of Modern Science	9
2.4 The Interaction Between Formal Models and Natural Systems	11
2.5 Observables: The Link Between Observer and Reality	11
2.6 The Modeling Mirror	12
2.7 Abstraction and Approximation	13
2.8 Abstract States vs. Observable States	14
2.9 Measurement	14
2.10 The Simplifying Concept of Abstraction	15
2.11 Equations of State	15
2.12 Equivalent Descriptions	17
2.13 Symmetry and Symmetry Operations	18
2.14 The Goodness of the Model Depends on Where You Look ...	19
2.15 Smoothly Differentiable State Spaces	19
2.16 Bifurcations in State Space: Complexity	21
2.17 Catastrophes	22
2.18 Chaos	24
Chapter 3 Probability and Statistics	27
3.1 Introduction	27
3.2 Discrete Probability	27
3.3 Counting Techniques	28
3.3.1 Multiplication	29
3.3.2 Permutations	29
3.3.3 Combinations	29

3.3.4	Counting Indistinguishable vs. Distinguishable Entities	29
3.4	Conditional and Independent Events	30
3.5	Distributions	31
3.5.1	The Multinomial Coefficient	31
3.5.2	Binomial Distribution	31
3.5.3	Poisson Distribution	32
3.6	Continuous Probability	33
3.6.1	Some Mathematical Properties of Probability Density Functions	34
3.6.2	The Exponential Density Function	35
3.6.3	The Gaussian Distribution	36
3.6.4	Stirling's Formula	37
3.6.5	The Boltzmann Distribution	38

Part 2 Physical Foundations

Chapter 4	Physical Principles: Energy—The Prime Observable	43
4.1	Abstractions and Experiments	43
4.2	Potential Energy Surfaces: Finding Structure by Measuring Energy	43
4.3	Structure over Time: Function Is Structure in Motion	44
4.4	The Foundation Principles: Symmetry, Conservation, and Action	46
Chapter 5	Physical Principles: Mechanics and Motion	48
5.1	The Dance of Molecules: Learning the Steps	48
5.2	Motion in One and Two Dimensions	48
5.2.1	Motion Under Constant Acceleration	49
5.2.2	Projectile Motion in a Constant Potential Energy Field (near the earth with vertical acceleration of g)	49
5.2.3	Circular Motion with Constant Speed (the centrifuge)	49
5.2.4	Newton's Laws of Motion	51
5.3	Force and Mass	51
5.4	Conservation	52
5.5	Constant Forces for Constant Consideration	52
5.5.1	Buoyant Forces	53
5.5.2	Retarding Forces Proportional to Speed	53
5.5.3	Frictional Coefficients in the Analysis of Macromolecular Structure	53
5.5.4	Circular Motion	54
5.5.5	Sedimentation	55
5.6	Work	58
5.6.1	Electrical Work	59
5.6.2	Pressure-Volume Work	60
5.6.3	Gravity and Springs	60
5.6.4	Oscillatory Motion	61
5.7	Collisions	61
5.8	Mechanics and Molecules	62
5.8.1	Kinetic Theory of Temperature and Internal Energy of Systems	63

5.8.2	The Pressure of a Gas	63
5.8.3	The Law of Equipartition of Energy	65
Chapter 6	Physical Principles: Waves	68
6.1	The Essential Wave	68
6.2	Pulses	68
6.3	The Wave Function	69
6.4	Superposition and Interference	69
6.5	Velocity of a Wave Pulse	70
6.5.1	Velocity of Sound	70
6.6	Reflection and Transmission	71
6.7	Harmonic Waves	71
6.7.1	Wavelength, Frequency, and Velocity	72
6.7.2	Polarization	72
6.7.3	Superposition and Interference: Waves of the Same Frequency	74
6.8	Energy and Intensity of Waves	76
6.8.1	Sound and the Human Ear	77
6.9	Standing Waves	77
6.10	Superposition and Interference: Waves of Different Frequencies	79
6.11	Complex Waveforms	80
6.12	Wave Packets	80
6.13	Dispersion	82
6.14	The Wave Equation	82
6.15	Waves in Two and Three Dimensions	83
6.16	The Doppler Effect	85
6.17	Interference of Two or More Point Sources	85
6.18	Wave Propagation	87
6.19	Determination of Structure: X-ray Diffraction	89
Chapter 7	Physical Principles: Electrostatics	97
7.1	The Electric Force	97
7.2	Electrostatics	97
7.3	The Electric Field	99
7.4	Electric Dipoles	101
7.5	Electric Flux	101
7.6	Gauss's Law	102
7.7	Motion of Point Charges in an Electric Field	102
7.8	Electric Potential	103
7.9	Equipotential Surfaces	104
7.10	Calculating Potential Fields	106
7.11	Electrostatic Field Energy	106
Chapter 8	Physical Principles: Electromagnetics	109
8.1	Electric Current	109
8.1.1	Current Density and Flux	109
8.1.2	Ohm's Law	109
8.2	Circuits	110
8.2.1	Useful Legal Relations	110
8.2.2	Kirchoff's Rules	110

8.2.3	Capacitors in Series and Parallel	111
8.2.4	Resistors in Series and Parallel	111
8.2.5	RC Circuits and Relations	112
8.3	Measuring Instruments	113
8.3.1	Ammeters, Voltmeters, and Ohmmeters	114
8.4	Magnetism	115
8.5	Magnetic Fields	115
8.6	Magnet Interactions	116
8.7	Interactions of Charges with a Magnetic Field	117
8.7.1	Current Loops in a $\mathbf{B}$ Field	117
8.7.2	Point Charges in a $\mathbf{B}$ Field	117
8.8	The Mass Spectrometer	117
8.9	The Solenoid: The Parallel Plate Capacitor for Magnetic Studies	118
8.10	Magnetism in Matter	119
8.11	Atomic Magnetic Moments	120
8.12	The Dipole Radiator: Electromagnetic Radiation	121
8.12.1	Optics	122
Chapter 9	Physical Principles: Quantum Mechanics	125
9.1	The Historical Hubris of Certainty	125
9.2	The End of Certainty: The Quantum Revolution	125
9.3	The Ultraviolet Catastrophe	126
9.3.1	Thermal Radiation	127
9.3.2	Black-Body Radiation	127
9.3.3	Classical Theory of Cavity Radiation	128
9.3.4	Planck's Theory of Cavity Radiation	129
9.3.5	Quantum Model Making: Epistemological Reflections on the Model	130
9.4	Heat Capacity	131
9.5	Photon-Particle Properties of Radiation	132
9.5.1	The Photoelectric Effect	132
9.6	The Dual Nature of Electromagnetic Radiation	133
9.7	Wavelike Properties of Particles: DeBroglie's Postulate	134
9.8	The Electron Microscope	135
9.9	The Uncertainty Principle	136
9.10	Atomic Structure: Historical Tracing of the Concept of the Atom	137
9.10.1	Atomic Spectra	138
9.10.2	Bohr's Model	139
9.11	Quantum Mechanics	142
9.11.1	The Schrödinger Equation	144
9.12	Solutions to the Time-Independent Schrödinger Theory	145
9.12.1	Linear Motion: Zero Potential Field	145
9.12.2	The Step Potential	147
9.12.3	The Barrier Potential	147
9.12.4	The Square Well Potential	148
9.12.5	The Harmonic Oscillator	150
9.12.6	Rotational and Angular Motion	152
9.13	Building the Atomic Model: One Electron Atom	152

9.14	Building the Atomic Model: Multielectron Atoms	154
9.14.1	Fermions and Bosons	154
9.14.2	Hartree Theory	156
Chapter 10	Chemical Principles	158
10.1	Electronic Distribution	158
10.2	The Nature of Chemical Interactions	158
10.3	Ion-Ion Interactions	158
10.4	Ion-Dipole Interactions	158
10.5	Ion-Induced Dipole Interactions	159
10.6	van der Waals Interactions	159
10.6.1	Dipole-Dipole Interactions	160
10.6.2	Dipole-Induced Dipole	160
10.6.3	Induced Dipole-Induced Dipole or London Forces	160
10.7	Covalent Bonds	161
10.8	Lewis Structures	161
10.9	VSEPR Theory	161
10.10	Molecular Orbital Theory	162
10.10.1	Linear Combination of Atomic Orbitals Molecular Orbital Method	163
10.10.2	More on the Molecular Bond	167
10.10.3	Valence Bond Theory	167
10.11	Hydrogen Bonds	169
10.12	Biological Systems from a Limited Number of Elements	170
Part 3	Measuring a System: Tools for Exploring Natural State Space	273
Chapter 11	Measuring the Energy of a System: Energetics and the First Law of Thermodynamics	175
11.1	The Caloric: Are New Rules Necessary?	175
11.2	The First Law: "The Energy of the Universe Is Conserved"	175
11.3	Defining Thermodynamic Terms	176
11.3.1	Systems, Surroundings, and Boundaries	176
11.3.2	Properties of a System	176
11.3.3	Extensive and Intensive Variables	176
11.3.4	The State of a System	177
11.3.5	Changes in State	177
11.4	Empirically Exploring the First Law	178
11.4.1	Specialized Boundaries as Tools	179
11.4.2	Evaluating the Energy of a System	180
11.5	Derivation of the Heat Capacity	182
11.6	A System Constrained by Pressure: Defining Enthalpy	183
Chapter 12	The Whole Is Greater than the Sum of Its Parts: Entropy and the Second Law	187
12.1	Perpetual Motion Machines	187
12.1.1	The Concept of Equilibrium	187
12.2	A Thought Problem: Designing a Perfect Heat Engine	188
12.2.1	Reversible versus Irreversible Paths	188
12.2.2	A Carnot Cycle	191
12.2.3	The Product of Our Thoughts: Entropy	194

12.3	Entropy: A Mechanical/Kinetic Approach	195
12.3.1	The Statistical Basis of a Mechanistic Theory	196
12.3.2	Measuring Statistically: Fluctuations	197
12.4	Statistical Thermodynamics	197
12.4.1	The Ensemble Method	197
12.4.2	The Canonical Ensemble	199
12.4.3	Energy Distributions	201
12.4.4	A Statistical View of Heat Flow	202
12.4.5	Internal Molecular Motions, Energy, and Statistical Mechanics	203
12.5	A Statistical View of Entropy	204
12.5.1	Statistical Distributions	204
12.5.2	The Statistical Links to Entropy	205
12.6	The Third Law and Entropy	206
Chapter 13	Which Way Is That System Going? The Gibbs Free Energy	208
13.1	Biological Energy Transduction	208
13.1.1	A Biophysical Examination of Photosynthesis	211
13.2	The Gibbs Free Energy	214
13.3	The Properties of the Gibbs Free Energy	215
13.4	Introduction of μ , the Free Energy per Mole	217
13.5	The Activity: Transforming the Ideal into the Real	217
13.6	Multiple-Component Systems	218
13.7	Chemical Potential and Chemical Systems	219
13.7.1	Characteristics of μ	219
13.8	Entropy, Enthalpy, and Free Energy of Mixing	220
13.9	Free Energy and Chemical Equilibrium	221
13.9.1	Derivation of the Activity	221
13.9.2	Activity of the Standard State	222
13.9.3	The Equilibrium Expression	222
13.10	The Thermodynamics of Galvanic Cells	224
13.11	Free Energy Changes and Biochemical Reactions	225
Chapter 14	Friends and Neighbors—Interactions in a System: Phase Equilibria	228
14.1	Principles of Phase Equilibria	228
14.2	Thermodynamics of Transfer Between Phases	229
14.3	The Phase Rule	229
14.4	Pure Substances and Colligative Properties	230
14.4.1	Colligative Properties and the Ideal Solution	232
14.4.2	Measurements of the Activity Coefficient Using Colligative Properties	234
14.5	Surface Phenomena	234
14.6	Binding Equilibria	236
14.6.1	Binding at a Single Site	237
14.6.2	Multiple Binding Sites	237
14.6.3	Binding When Sites Are Equivalent and Independent	238
14.6.4	Equilibrium Dialysis and Scatchard Plots	239
14.6.5	Binding in the Case of Nonequivalent Sites	241
14.6.6	Nonindependent Binding: Cooperativity	241
14.6.7	Proton Binding: The pH Behavior of Biomolecules ...	243

Chapter 15	Spectroscopy: Analysis of Structure	249
15.1	The Interaction of Light with Matter	249
15.2	Atomic and Molecular Energy Levels and Structure: A Quantum Phenomenon	249
15.2.1	Points of Maximum Inflection at Particular Wavelengths	249
15.2.2	Each Maximum Has a Different Intensity	250
15.2.3	The Maxima Are Spread to Some Degree and Are Not Sharp	252
15.3	Biochemical Applications of Absorption Spectroscopy	254
15.3.1	Absorption Spectroscopy	254
15.4	Fluorescence and Phosphorescence	257
15.5	Molecular Probes That Depend on Scattering Processes	259
15.5.1	Rayleigh and Raman Scattering	259
15.5.2	Circular Dichroism and Optical Rotation	261
15.6	Structure Determination from Spin: EPR and NMR Spectroscopy	262
Chapter 16	Analysis of Structure: Microscopy	268
16.1	Seeing Is Believing	268
16.2	The Light Microscope	269
16.3	The Problem of Contrast	271
16.3.1	Dark-Field Microscopy	272
16.3.2	Phase Microscopy	272
16.3.3	Polarization Microscopy	273
16.3.4	Histochemistry	273
16.3.5	Fluorescence Microscopy	275
16.4	Scanning Probe Microscopy	275
16.4.1	Scanning Tunneling Microscopy (STM)	277
16.4.2	Scanning Force Microscopy	278
16.4.3	Near-Field Optical Microscopy: Outside the Classical Limits	280
Chapter 17	Scenic Overlook Backward and Forward	282
17.1	Hierarchy of Abstraction in Biophysical Chemistry	282
Part 4	The Structure of Biological State Space: Building a Model of Aqueous Biochemistry	
Chapter 18	Water: A Unique Structure, a Unique Solvent	287
18.1	Introduction	287
18.2	Physical Properties	288
18.3	Classification of Water as a Liquid	288
18.4	The Structure of Monomolecular Water	289
18.5	Hydrogen Bonds in Water	291
18.6	Liquid Water: Structure and Dynamics	293
18.6.1	Theories of the Structure of Liquid Water	294
18.7	Hydrophobic Forces	297
Chapter 19	Ion-Solvent Interactions	300
19.1	Understanding the Nature of Ion-Solvent Interactions Through Modeling	300

19.2	The Born Model	300
19.2.1	Building the Model	300
19.2.2	Testing the Model	303
19.3	Adding Water Structure to the Continuum	305
19.3.1	The Energy of Ion-Dipole Interactions	305
19.3.2	Dipoles in an Electric Field: A Molecular Picture of Dielectric Constants	306
19.3.3	What Happens When the Dielectric Is Liquid Water?	310
19.4	Extending the Ion-Solvent Model Beyond Born	312
19.4.1	Recalculating the New Model	313
19.5	Ion-Solvent Interactions in Biological Systems	317
Chapter 20	Ion-Ion Interactions	319
20.1	Ion-Ion Interactions	319
20.2	The Debye-Hückel Model	320
20.3	Testing the Debye-Hückel Model	325
20.4	A More Rigorous Treatment of the Debye-Hückel Model	327
20.5	Consideration of Other Interactions	328
20.5.1	Bjerrum and Ion Pairs	328
Chapter 21	Lipids in Aqueous Solution: The Formation of the Cell Membrane	330
21.1	The Form and Function of Biological Membranes	330
21.2	Solutions of Small Nonpolar Molecules	330
21.3	Solutions of Organic Ions	331
21.3.1	Solutions of Small Organic Ions	331
21.3.2	Solutions of Large Organic Ions	332
21.4	The Major Classes of Biochemical Species: Lipids	334
21.5	Aqueous and Lipid Phases in Contact: The Organization of Lipids into Membranes	337
21.6	The Physical Properties of Lipid Membranes	341
21.6.1	Phase Transitions in Lipid Membranes	341
21.6.2	Motion and Mobility in Membranes	342
21.7	Biological Membranes: A More Complete Picture	343
Chapter 22	Constructing a Biological State Space	346
22.1	The Cell and Biological Complexity	346
22.2	A Brief History of Life: A Picture Book of a Controversial Subject	346
22.3	Bifurcations, Catastrophes, and Evolution	348
22.3.1	The Energy and Resource Problem	348
22.3.2	The Waste Problem: Global Oxygenation	349
22.3.3	The Eukaryotic Catastrophe	350
22.4	Compartmentalization	352
22.5	An Overview of the Cell	352
22.5.1	The Cell Membrane	352
22.5.2	The Cytoplasmic Space	353
22.5.3	The Organelles	354
22.5.4	The Nuclear Space	357
22.6	Control Mechanisms	358

Chapter 23	Macromolecules in Solution	361
23.1	Introduction	361
23.2	Random Walk and Markov Processes	361
23.3	Peptides and Proteins	362
23.4	Carbohydrates	367
23.4.1	Polysaccharides	369
23.5	The Major Classes of Biochemical Species: Nucleic Acids	370
23.5.1	Chemistry of Purines and Pyrimidines	371
23.6	Nonpolar Polypeptides in Solution	374
23.7	Polar Polypeptides in Solution	376
23.8	Transitions of State	381
23.9	The Protein Folding Problem	385
23.10	Pathological Protein Folding	388
23.10.1	Alzheimer's Disease	389
23.10.2	Familial Amyloidotic Polyneuropathy	390
23.10.3	Spongiform Encephalopathies	390
Chapter 24	Molecular Modeling: Mapping Biochemical State Space	394
24.1	The Prediction of Structure and Function	394
24.2	Principles of Molecular Modeling	394
24.3	Empirical Methods	395
24.3.1	Sticks and Stones	395
24.3.2	The Art of the Possible: Ramachandran Plots	397
24.3.3	The Medium Is the Message: Secondary Structure Prediction	401
24.4	The Ultimate Gedanken Experiments? Computational Methods	403
24.5	Molecular Mechanics	407
24.5.1	Bond Stretching	409
24.5.2	Bond Bending	410
24.5.3	Torsional or Dihedral Potential Functions	410
24.5.4	Van der Waals Interactions	411
24.5.5	Electrostatic Interactions	412
24.6	Quantum Mechanical Methods	413
Chapter 25	The Electrified Interface	415
25.1	When Phases Meet: The Interphase	415
25.2	A More Detailed Examination of the Interphase Region	417
25.3	The Simplest Picture: The Helmholtz-Perrin Model	419
25.4	A Diffuse Layer versus a Double Layer	419
25.5	Combining the Capacitor and the Diffuse Layers: The Stern Model	420
25.6	A Complete Picture of the Double Layer	421
25.7	Colloidal Systems and the Electrified Interface	422
25.8	Salting Out Revisited	426
Chapter 26	Forces Across Membranes	427
26.1	Energetics and Force in Membranes	427
26.2	The Donnan Equilibrium	427

26.3	Electric Fields Across Membranes	429
26.3.1	Diffusion Potentials and the Transmembrane Potential	429
26.3.2	Goldman Constant Field Equation	430
26.4	Electrostatic Profiles of the Membrane	432
26.5	The Electrochemical Potential	434
26.6	Molecules Through Membranes: Permeation of the Lipid Bilayer	434
26.6.1	Modes of Transport	434
26.6.2	Water Transport Through a Lipid Phase	435
Part 5	Function and Action in State Space	
Chapter 27	Transport: A Nonequilibrium Process	441
27.1	Transport: An Irreversible Process	441
27.2	Principles of Nonequilibrium Thermodynamics	442
Chapter 28	Flow in a Chemical Potential Field: Diffusion	445
28.1	The Phenomenon of Transport	445
28.2	Diffusion and the Chemical Potential	445
28.3	The Random Walk: A Molecular Picture of Movement	448
28.4	Drag Forces on Molecules in Motion	451
28.5	Transport of Fluids Under Shear Stress	452
Chapter 29	Flow in an Electrical Field: Conduction	455
29.1	Transport in an Electric Field	455
29.1.1	The Nature of Ionic Species	455
29.2	A Picture of Ionic Conduction	456
29.3	The Empirical Observations Concerning Conduction	458
29.4	A Molecular View of Ionic Conduction	462
29.5	How Do Interionic Forces Affect Conductivity?	464
29.6	The Special Case of Proton Conduction	466
Chapter 30	Electrokinetic Phenomena	470
30.1	The Cell and Interphase Phenomena	470
30.2	Electrokinetic Phenomena	470
30.2.1	The Zeta Potential	470
30.2.2	Streaming Potential	471
30.2.3	Electro-osmosis	471
30.2.4	Electrophoresis	472
30.2.5	Sedimentation Potential	474
30.3	Practical Application of Electrophoresis	474
30.4	Electrokinetics and Biology	476
Chapter 31	Kinetics: Chemical Kinetics	480
31.1	Chemical Thermodynamics and Kinetics	480
31.2	Chemical Kinetics: A Historical View	480
31.3	The Language of Kinetics: The Players	483
31.3.1	Mechanism and Order	483
31.4	Order of a Reaction	483
31.5	Expressions of the Rate Laws	484
31.5.1	Zero-Order Reactions	484
31.5.2	First-Order Reactions	485

31.5.3 Second-Order Reactions 485

31.5.4 Experimental Determination of a Rate Law 486

31.6 Elementary Reactions 486

31.7 Reaction Mechanisms 487

31.7.1 Collision Theory 487

31.7.2 Surprises in the Collision Theory State Space 489

31.7.3 An Extended Abstraction: Transition State Theory 490

31.7.4 Unifying Our Models: The Potential Energy Surface 492

Chapter 32 Kinetics: Enzymes and Electrons 498

32.1 Solution Kinetics 498

32.2 Enzymes 498

32.2.1 Enzyme Kinetics 499

32.2.2 Characterizing the Properties of an Enzyme 501

32.2.3 Control of Enzymes 503

32.3 Kinetics of Electron Transfer 504

32.3.1 Dynamic Electrochemistry 504

32.3.2 Electron Transfer 506

32.3.3 A Quantum Mechanical Version of Electron Transfer 509

32.4 Electronic Charge Transfer in Proteins 509

Epilogue 516

Appendixes 517

Appendix A Mathematical Methods 519

A.1 Units and Measurement 519

A.2 Trigonometric Functions 519

A.3 Expansion Series 521

A.4 Differential and Integral Calculus 521

A.4.1 Partial Differentiation 521

A.5 Vectors 524

A.5.1 Addition and Subtraction 524

A.5.2 Magnitude of a Vector 524

A.5.3 Multiplication 524

Appendix B Fictitious and Pseudoforces: The Centrifugal Force 526

Appendix C The Determination of the Field from the Potential in Cartesian Coordinates 527

Appendix D Hamilton's Principle of Least Action/Fermat's Principle of Least Time 528

Appendix E Geometrical Optics 529

E.1 Reflection and Refraction of Light 529

E.2 Mirrors 529

E.2.1 The Plane Mirror 529

E.2.2 The Concave Mirror 530

E.3 Image Formation by Refraction 531

E.4 Prisms and Total Internal Reflection 532

Appendix F	Derivation of the Energy of Interaction Between Two Ions ..	534
Appendix G	Derivation of the Statement $q_{\text{rev}} > q_{\text{irrev}}$	535
Appendix H	Derivation of the Clausius-Clapeyron Equation	536
Appendix I	Derivation of the van't Hoff Equation for Osmotic Pressure	537
Appendix J	Derivation of the Work to Charge and Discharge a Rigid Sphere	538
Appendix K	Quantum Electrodynamics	539
Appendix L	Adiabatic and Nonadiabatic Transitions	541
Appendix M	Fermi's Golden Rule	542
Physical Constants		543
Answers to Selected Problems		544
Index		549
