

Contents

1. LARGE-SCALE EXTRACTION AND PURIFICATION OF ENZYMES AND OTHER PROTEINS	1
Extraction by Chemical Methods	2
Alkali	2
Lysozyme and EDTA	3
Detergents	3
Cold Shock	4
Osmotic Shock	4
Extraction by Physical Methods	5
Sonication	5
Freezing and Thawing	6
Solid Shear	7
Grinding or Agitation with Abrasives	8
Liquid Shear	10
Isolation and Purification	11
Nucleic Acid Removal	11
Cetyltrimethyl Ammonium Bromide	12
Streptomycin Sulphate	12
Polyethyleneimine	13
Nuclease Treatment	14
Concentration by Precipitation	14
Ammonium Sulphate	14
Organic Solvents	16
High Molecular Weight Polymers	17
Concentration by Ultrafiltration	17
Concentration by Freeze-Drying	21
Gel Chromatography	22

Ion Exchange Chromatography	25
Ion Exchange Resins	26
Ion Exchange Celluloses	26
Other Ion Exchange Gels	26
Affinity Chromatography	30
Coupling Techniques	31
Non-Specific Adsorbents	33
Hydroxyapatite	33
Celite	35
Hydrophobic Interaction Chromatography	35
High Performance Liquid Chromatography	36
Electrophoretic Techniques	37
Electrophoresis.	37
Isoelectric Focusing	39
Multimembrane Electrodecantation	40
Chromatofocusing	41
Aqueous Two-Phase Separation	41
 2. PRINCIPLES OF INDUSTRIAL ENZYMOLOGY: BASIS OF UTILIZATION OF SOLUBLE AND IMMOBILIZED ENZYMES IN INDUSTRIAL PROCESSES	 43
Glossary of Symbols	43
Assay of Enzyme Activity	49
Cofactors	50
The Distinctive Features of Enzymes as Catalysts	51
Enzyme Catalysis	53
Enzyme Kinetics	57
The Effect of p^H on Enzyme Activity	61
The Effect of Temperature on Enzyme Activity	62
Enzyme Inhibition	63
The Various Types of Enzymic Catalyst	65
A Comparison of Enzymes with Chemical Catalysts	66
A Comparison of Enzymes with Fermentations	66
Immobilized Biocatalysts	68
A Comparison of Immobilized Enzymes and Cells	74
An Assessment of Immobilization Supports and Methods	77
Characterisation of Immobilized Biocatalysts	80
Co-Immobilized Enzymes	81
Two-Phase Reaction	83

Industrial Enzyme Kinetic	86
Effects on Equilibria	89
Effectiveness Factors	91
Steady - State Kinetics	93
Intrinsic Activity of Enzymes - Modifying Factors	97
Introduction	97
Diffusional Limitations on the Activity of Immobilized Biocatalysts	99
External Diffusional Limitations	100
Internal Diffusional Restrictions	100
Regeneration of Cofactors	104
Biochemical Reactors	106
Introduction	106
The Various Types of Biochemical Reactor	107
Assessment of the Performance of Biochemical Reactors	110
Batch Reactors	113
Continuous Stirred Tank Reactors	114
Plug-flow Column Reactors (or Tubular Reactors)	115
Fluidized Bed Reactors	117
Electrochemical Reactors	118
Ultrafiltration Reactors	118
Enzyme Kinetic in Reactors	119
Inhibition in Enzyme Reactors	123
The Effect of Non-Ideal Flow on Biochemical Reactor Performance	125
Physical Problems in Biochemical Reactor using Immobilized Biocatalysts	128
Abrasion	128
Compression	129
Fouling	130
Microbial Contamination	132
The Stability of Immobilized Biocatalysts	134
Introduction	134
The Stability of Biochemical Reactors Employing Immobilized Enzymes or Immobilized Cells	140
Regeneration of Biocatalyst Activities	142
Constant Productivity with Biocatalyst Reactors	143
Scale-Up	145
Discussion	147

3. PRINCIPLES OF IMMOBILIZATION OF ENZYMES	149
Classification of Immobilized Enzymes	149
Techniques of Enzyme Immobilization	149
Entrapment	151
Gel Entrapment	151
Fibre Entrapment	151
Micro-encapsulation	152
Carrier Binding	153
Physical Adsorption	157
Ionic Binding Method	159
Chelation or Metal Binding	160
Covalent Binding	161
Crosslinking	177
Immobilized Soluble Enzymes	178
Immobilization without Enzyme Derivitization	178
Immobilization with Enzyme Derivitization	179
Miscellaneous Methods	181
Choice of Immobilization Method	184
Outline of Properties of Immobilized Enzymes	186
Stability	186
Kinetic Properties	187
Outline of Enzyme Reactors	189
Batch Reactors	189
Continuous Reactors	191
Application and Future Trends	194
Analytical Applications	194
Enzyme Electrodes	194
Automated Analysis	196
Therapeutic Applications	196
Enzyme Replacement	197
Enzyme Therapy	197
Industrial Applications	197
Future Trends	198
4. ENZYMES IN CLINICAL ANALYSIS - PRINCIPLES	199
Measurment of Substrate Concentration with Enzymes	202
Principles of Equilibrium Methods	202
Principles of Kinetic Methods	205

Comparison of Equilibrium and Kinetic Methods	209
Common Indicator Species Used in Routine Clinical Analysis	209
Nicotinamide Adenine Dinucleotides	209
Oxygen and Hydrogen Peroxide	212
Measurement of Enzymes	214
Principles of Enzyme Assay Using Coupled Enzymes	214
Immobilized Enzymes for Measuring Substrate Concentrations	217
Immobilized Enzyme Reactor Tubes	218
Bioanalytical Probes	219
Dry Reagent Chemistry	223
Enzyme Immunoassay (ELA)	228
Preparation of Enzyme Labels	229
Homogeneous EIA	230
Heterogeneous EIA	233
Choice of Enzyme Label	233
Assay in EIA	236
Simultaneous Assay of Two Haptens	236
The Future	237
5. PRACTICAL ASPECTS OF LARGE-SCALE PROTEIN PURIFICATION	238
Enzyme Inactivation	238
Containers and Ancillary Equipment	239
Glass Vessels	239
Metal Vessels	239
Plastic Vessels	241
Liquid Transfer	243
Couplings	243
Pumps	243
Bacterial Disruption	243
Resuspension	243
Liquid Shear	244
Grinding	245
Centrifugation	247
Batch Centrifuges	247
Continuous Flow Centrifuges	248
Disc Type Centrifuge	249
Hollow Bowl Centrifuges	250

Basket Centrifuges	250
Tangential Flow Filtration	251
Concentration	252
Ultrafiltration	252
Stirred Cells	252
Thin Channel Systems	252
Cartridge Membranes	253
Hollow Fibres	254
Dialysis	254
Chromatography	255
1 Columns	255
Gel Chromatography	256
Ion Exchange Chromatography	264
Affinity Chromatography	269
6. THE APPLICATIONS OF ENZYMES IN INDUSTRY	270
Glossary of Terms	270
Production of Enzymes	273
Use of Enzyme — General Comments	276
The Characteristics of Industrial Enzymes	286
Sources of Enzymes	287
The Isolation, Purification and Formulation of Enzymes	290
Legislation on the Use of Enzymes	293
Enzyme Manufacturers	296
Biochemical Applications	302
Use of Enzymes in Analysis	305
General	305
In Clinical Assays	311
Medical Uses of Enzymes	317
The Use of Enzymes as Catalysts in Organic Chemistry	318
Introduction	318
Stereospecificity of Enzymes	321
Prochiral Stereospecificity	322
Combinations of Stereospecificity	324
Multiple-Step Reactions	325
Synthesis of Radioactive Compounds	327
Restriction Endonucleases	328
Biochemical Processing	331

Applications of Enzymes in the Food Industry	333
Polysaccharide Processing	334
Bacterial α -amylase	334
Amyglucosidase (EC 3.2.1.3)	336
Maltose Syrups	339
Glucose Isomerase (EC 53.1.5)	342
Inversion of Sucrose	348
Sugar Refining	349
Raffinase	349
α -amylase	350
Dextranase (EC3.2.1.11)	350
Debranching Enzymes	351
Cyclodextrin Glucosyltransferase and Other Amylases	351
Cellulase (EC3.2.1.4)	352
Ethanol Fermentation	354
Brewing	355
Baking	358
The Dairy Industry	360
Lactose Hydrolysis	361
Cheese Manufacture	363
Coagulation	363
Flavour Development	365
Other Applications	366
Organic Acids	367
Amino Acids	368
Introduction	368
Enzymic Resolution	368
Enzymic Production of Amino Acids	369
Antioxidant	371
Introduction	371
Glucose Oxidase (EC 1.1.3.4)	371
Protein Processing	372
Introduction	372
The Plastein Reaction	374
Aspartame	375
Others	375
Flavouring Agents	376
Fruit Processing	377

Use of Enzymes in the Extraction of Natural Products	380
Detoxifying Enzymes	381
Enzyme-Based Detergents	383
Use of Enzymes as Cleansing Agents	384
The Leather Industry	384
Textiles	385
Paper Manufacture	386
Antibiotics	386
Penicillin Acylase, (EC 3.5.1.11)	386
Cephalosporins	389
Miscellaneous uses of Biocatalysts	390
Conclusion	391
Note in Proff	392
Acrylamide	392
Propylene Oxide	393
Vinyl Chloride	393
Biosensors	393
Amino Acids	394
7. DATA ON TECHNIQUES OF ENZYME IMMOBILIZATION AND BIOAFFINITY PROCEDURES	395
Entrapment	395
Gel Entrapment	395
Fibre Entrapment	397
Microencapsulation	397
Phase Separation Method	397
Interfacial Polymerization Method	397
Liquid Surfactant Membrane Method	398
Liquid Drying Method	398
Chelation or Metal Binding	399
Covalent Binding	400
Diazotization	401
Amide Bond Formation	401
Acid Anhydride Derivatives	403
Acylazide Derivatives	404
Cyclic Imidocarbonate Derivatives	404
Isocyanate and Isothiocyanate Derivatives	405
Acyl Chloride Derivatives	406
Cyclic Carbonate Derivatives	407

Condensing Reagents	407
Alkylation and Arylation	408
Schiff's Base Formation	411
Ugi Reaction	412
Amidination Reactions	413
Thiol-Disulphide Interchange	413
Mercury-Enzyme Interactions	414
γ -Irradiation Induced Coupling	414
Matrices for Carrier Binding	415
Inorganic Supports	417
Controlled Pore Supports	418
Other Porous Supports	418
Non-porous supports	418
Coupling Reactions for Inorganic Supports	419
Organic Supports	420
Polysaccharides	421
Proteins	422
Carbon	423
Polystyrenes	424
Polyacrylates	425
Maleic Anhydride Based Copolymers	428
Polypeptides	428
Vinyl and Allyl Polymers	429
Polyamides	430
Crosslinking	431
Immobilized Cells	433
Entrapment	433
Physical Adsorption	433
Chelation or Metal Binding	434
Covalent Binding	434
Crosslinking	435
Other Immobilized Biologically Active Molecules	435
Immunoabsorbents	435
Affinity Chromatography Media	436
Immobilized Lactins	436
Immobilized Amino Acids and Peptides	437
Immobilized Carbohydrates	437

Immobilized Nucleosides, Nucleotides and Nucleic Acids	437
Immobilized Antibiotics	438
8. ENZYMES IN CLINICAL ANALYSES — DATA	439
Substrates Measured Enzymically in Clinical Laboratories	439
Enzymes Measured by Coupled Enzyme System in Clinical Laboratories	453
Immobilized Enzymes for Measuring Substrates	459
Enzymes Used in Enzyme Immunoassay (EIA)	459
