

Contents

Unit-I General Biochemistry

1. Cell Structure and Function	3
2. Chemistry Review	18
3. Introduction to Biological Macromolecules	28
4. Chemistry of Amino Acids and Proteins	32
5. Chemistry of Carbohydrates	55
6. Chemistry of Lipids	62
7. Glycosaminoglycans and Proteoglycans	70
8. Collagen	74
9. Hemoglobin is an Allosteric Protein	78
10. Heme Metabolism	86
11. Mineral Metabolism	98
12. Calcium and Phosphate	110
13. Water and Electrolytes	115
14. Acid-Base Regulation	129
15. Vitamins and Coenzymes	140
16. Oxidative Phosphorylation	161
17. Free Radical Formation	172
18. Enzymes: Basic Concepts and Kinetics	179
19. Hormones and Receptors	198
20. Nutritional Needs	210
21. Biochemistry of Nerve Impulse Transmission	221
22. Contractile Proteins (Muscle) the Sarcomere	226
23. Blood Coagulation	232

Unit-II

Metabolism and Biochemical Genetics

24. Signal Transduction Cascades	247
25. Amino Acid Metabolism	257
26. Nitrogen Metabolism	275
27. Specialized Products of Amino Acids	286
28. Intestinal Uptake and Transport of Lipids	293
29. Fatty Acid Metabolism	304
30. Metabolism of Triglycerides and Phospholipids	323
31. Cholesterol and Bile Acid Metabolism	332
32. The PDH Complex and TCA Cycle	339
33. Insulin Function and Diabetes	346
34. Glycogen Metabolism	355
35. Glucose Metabolism	363
36. Fructose Metabolism	383
37. Chemistry of Nucleotides	389
38. Nucleotide Metabolism	395
39. Nucleic Acid Structure and Function	413
40. DNA Synthesis (Replication)	421
41. RNA Synthesis (Transcription)	435
42. Protein Biosynthesis (Translation)	447
43. Protein Modifications and Targeting	456
44. Control of Gene Expression	467
45. Proto-oncogenes and Cancer	473
46. Molecular Tools in Medicine	480
Appendix	495
Index	501
