

TABLE OF CONTENTS

Chapter 1	
Introduction	1
Chapter 2	
Reactive Groups of Proteins and Their Modifying Agents	7
I. Introduction	7
II. Compositions of Proteins	7
A. Amino Acids	7
B. Prosthetic Groups	8
III. Functional Groups of Proteins	8
A. Reactive Amino Acid Side Chains	8
1. Relationship between Nucleophilicity and Reactivity	10
2. Effects of pH	12
3. Effects of Microenvironment	14
B. Chemically Introduced Reactive Groups	14
1. Reduction of Disulfide Bonds	16
2. Interconversion of Functional Groups	16
a. Conversion of Amines to Carboxylic Acids	16
b. Conversion of Amino to Sulfhydryl Groups	17
c. Conversion of Thiols to Carboxylic Acids	23
d. Conversion of Thiols to Amines	23
e. Conversion of Carboxylic Acids to Amines	23
f. Conversion of Hydroxyl to Sulfhydryl Groups	23
g. Conversion of Tyrosine to Aminotyrosine and Other Derivatives	25
3. Introduction of Carbohydrate Prosthetic Groups	25
4. Activation of Carbohydrates by Periodate	27
IV. Group Directed Reagents	27
A. Sulfhydryl Reagents	30
1. α -Haloacetyl Compounds	30
2. N-Maleimide Derivatives	30
3. Mercurial Compounds	32
4. Disulfide Reagents	32
B. Amino Group Specific Reagents	33
1. Alkylating Agents	34
a. α -Haloacetyl Compounds	34
b. N-Maleimide Derivatives	34
c. Aryl Halides	35
d. Aldehydes and Ketones	35
2. Acylating Agents	37
C. Reagents Directed Towards Carboxyl Groups	39
1. Diazoacetate Esters and Diazoacetamides	39
2. Carbodiimides	39
D. Tyrosine Selective Reagents	40
1. Acylating Agents	40
2. Electrophilic Reagents	40
E. Arginine Specific Reagents	40
F. Histidine Selective Reagents	42
G. Methionine Alkylating Reagents	42

H.	Tryptophan Specific Reagents	42
I.	Serine Modifying Reagents	44
	References	45

Chapter 3

	Choice and Design of Cross-Linking Reagents	49
I.	Introduction	49
II.	Nucleophilic Reactions	50
	A. The Basic Reaction	50
	1. Electrophilicity of the Substrate	51
	2. Leaving Group Reactivity	51
	B. Alkylation	51
	C. Acylation	53
III.	Electrophilic Reactions	58
IV.	Group Directed Reactions	58
	A. Disulfide Reagents	58
	B. Mercurial Reagents	60
	C. Reductive Alkylation	60
	D. Vicinal Dicarbonyl Reagents	60
V.	Nonspecific Reactions	60
VI.	Cleavable Reagents	63
	A. Disulfide Bond	63
	B. Mercurial Group	63
	C. Vicinal Glycol Bond	66
	D. Azo Linkage	66
	E. Sulfone Linkage	66
	F. Ester Bond	66
	G. Thioester Bond	66
	H. Maleylamide Linkage	66
	I. Acetals, Ketals and Orthoesters	66
VII.	Labeled Cross-Linking Reagents	67
	A. Reporter Groups	67
	B. Introduction of Radioactive Isotopes	68
VIII.	Hydrophobicity and Hydrophilicity of Reagents	69
	References	70

Chapter 4

	Homobifunctional Cross-Linking Reagents	75
I.	Introduction	75
II.	Amino Group Directed Cross-Linkers	75
	A. <i>bis</i> -Imidoesters	75
	B. <i>bis</i> -Succinimidyl Derivatives	98
	C. Bifunctional Aryl Halides	99
	D. Bifunctional Acylating Agents	99
	1. Di-isocyanates and Di-isothiocyanates	99
	2. Bifunctional Sulfonyl Halides	100
	3. <i>bis</i> -Nitrophenyl Esters	100
	4. Bifunctional Acylazides	100
	E. Dialdehydes	101
	F. Diketones	101
	G. Other Amino Group Reacting Cross-Linking Reagents	103

III.	Sulfhydryl Group Directed Cross-Linkers	104
A.	Mercurial Reagents	105
B.	Disulfide Forming Reagents	120
C.	Bismaleimides	120
D.	Bifunctional Alkylating Agents	121
1.	<i>bis</i> -Haloacetyl Derivatives	121
2.	<i>bis</i> -Alkyl Halides	121
3.	<i>s</i> -Triazines	122
4.	Aziridines	122
5.	<i>bis</i> -Epoxides (Bisoxiranes)	122
6.	Other Sulfhydryl Group Reacting Cross-Linkers	122
IV.	Carboxyl Group Directed Cross-Linking Reagents	123
V.	Phenolate and Imidazolyl Group Directed Cross-Linking Reagents	123
VI.	Arginine Residue Directed Cross-Linker	128
VII.	Nondiscriminatory Photoactivatable Cross-Linkers	128
VIII.	Noncovalent Homobifunctional Cross-Linking Reagents	128
A.	Avidin and Streptavidin	128
B.	Antibody and Antigen as Cross-Linkers	130
C.	Lectins	130
IX.	Miscellaneous Bifunctional Reagents	132
	References	133

Chapter 5

	Heterobifunctional Cross-Linkers	147
I.	Introduction	147
II.	Group Selective Heterobifunctional Cross-Linking Reagents	147
A.	Amino and Sulfhydryl Group Directed Cross-Linkers	147
B.	Cross-Linkers Directed toward Carboxyl and Either Sulfhydryl or Amino Groups	150
C.	Carbonyl and Sulfhydryl Group Directed Cross-Linkers	150
D.	Miscellaneous Heterobifunctional Cross-Linkers	150
III.	Photosensitive Heterobifunctional Cross-Linking Reagents	151
A.	Amino Group Anchored Photosensitive Reagents	184
B.	Sulfhydryl Group Anchored Photoactivatable Reagents	185
C.	Guanidinyll Group Anchored Photoactivatable Reagents	185
D.	Carboxyl and Carboxamide Group Anchored Photoactivatable Reagents	185
E.	Photoaffinity Reagents	188
IV.	Disguised or Masked Reagents	188
	References	189

Chapter 6

	Zero-Length Cross-Linking Reagents	195
I.	Introduction	195
II.	Carboxyl Group Activating Reagents	195
A.	Carbodiimides	195
B.	Isoxazolium Derivatives	199
C.	Chloroformates	200
D.	Carbonyldiimidazole	200
E.	<i>N</i> -Carbalkoxydihydroquinolines	202
F.	Miscellaneous Reagents	202

III.	Reagents for Carbohydrate Activation	203
IV.	Reagents for Disulfide Formation	203
V.	Enzymes as Zero-Length Cross-Linkers.....	203
A.	Transglutaminase	203
B.	Peroxidase.....	204
C.	Xanthine Oxidase	204
	References.....	204

Chapter 7

	Procedures, Analysis, and Complications	209
I.	Introduction	209
II.	Procedures for Cross-Linking	209
A.	Type of Reactions	209
1.	One-Step Reactions	209
2.	Two-Step Reactions.....	209
3.	Three-Step Reactions	210
4.	Multi-Step Reactions.....	210
B.	General Conditions for Cross-Linking	211
1.	Imidoesters.....	211
2.	<i>N</i> -Hydroxysuccinimide Esters.....	211
3.	Photosensitive Reagents.....	212
4.	Cleavage of Cross-Linked Complexes	212
a.	Disulfide Linkages	212
b.	Glycol Bonds.....	212
c.	Azo Bonds	212
d.	Sulfone Linkages	213
e.	Ester Bonds	213
III.	Analysis of Cross-Linked Products	213
A.	Gel-Filtration Chromatography	213
B.	Electrophoresis	213
C.	Ultracentrifugation.....	214
D.	Immunodiffusion	214
E.	Chemical Analysis.....	214
F.	Isotope Labeling Analysis	214
IV.	Reaction Complications	214
A.	General Considerations	214
B.	Immunogenicity	215
C.	Stability	215
	References.....	217

Chapter 8

	Application of Chemical Cross-Linking to Soluble Proteins.....	221
I.	Introduction	221
II.	Interresidue Distance Determinations	221
A.	Molecular Distances of Cross-Linking Reagents.....	221
B.	Measurement of Interresidue Distances.....	222
III.	Nearest Neighbor Analysis.....	223
A.	Quaternary Structures of Multisubunit Proteins.....	223
B.	Protein Organizations in Complex Cellular Systems.....	224
1.	Ribosomal Protein Arrangements	224
2.	Contractile Protein System.....	225
C.	Protein-Protein Interactions.....	227

IV.	Conformational Analysis.....	227
A.	Detection of Conformational Changes.....	227
B.	Conformation Lock.....	228
V.	Structural Stability.....	228
	References.....	229

Chapter 9

Cross-Linking of Membrane Proteins	233
I. Introduction.....	233
II. General Methodology of Membrane Cross-Linking.....	233
A. Choice of Cross-Linking Reagents.....	233
B. Reaction Procedures.....	234
III. Possible Artifacts of Membrane Cross-Linking.....	234
IV. Identification of Membrane Receptors.....	234
A. General Approaches.....	234
B. Specific Examples.....	235
1. Use of Photosensitive Heterobifunctional Cross-Linkers.....	235
2. Use of Other Bifunctional Cross-Linkers.....	236
V. Nearest-Neighbor Analysis of Membrane Components.....	237
A. Structural Analysis.....	237
B. Membrane Protein-Protein Interactions.....	239
VI. Membrane Protein Conformational Analysis.....	240
VII. Stabilization of Membrane Proteins.....	240
References.....	240

Chapter 10

Preparation of Enzyme Immunoconjugates and Other Immunoassay Components	245
I. Introduction.....	245
II. Components of Enzyme Immunoassays.....	248
A. Choice of Enzymes.....	248
B. Antibodies and Their Fragments.....	248
III. Conjugation of Enzymes to Antibodies and Their Fragments.....	250
A. Introduction of Thiol Groups into Immunoglobulins.....	250
B. Preparation of Horseradish Peroxidase Immunoconjugates.....	251
1. Conjugation with Amino and Thiol Directed Cross-Linkers.....	251
2. Conjugation through Disulfide Formation.....	252
3. Conjugation with Glutaraldehyde.....	252
4. Conjugation Using Periodate Oxidation.....	253
5. Conjugation with Miscellaneous Cross-Linkers.....	254
C. Preparation of Alkaline Phosphatase Immunoconjugates.....	254
1. Conjugation with Amino and Thiol Directed Reagents.....	254
2. Conjugation with Glutaraldehyde.....	254
3. Conjugation with Periodate Oxidation.....	255
D. Preparation of β -D-Galactosidase Immunoconjugates.....	255
1. Conjugation with Amino and Thiol Directed Reagents.....	255
2. Conjugation with Thiol Group Directed Dimaleimides.....	256
3. Conjugation with Phenolate and Thiol Group Directed Reagent.....	257
4. Conjugation with Glutaraldehyde.....	257

E.	Preparation of Glucose-6-Phosphate Dehydrogenase Immunoconjugates.....	257
F.	Preparation of Glucose Oxidase Immunoconjugates	258
1.	Coupling with <i>N</i> -Ethoxycarbonyl-2-Ethoxy-1,2-Dihydroquinoline (EEDQ)	258
2.	Coupling with Amino and Thiol Directed Reagents.....	258
3.	Coupling with Other Cross-Linkers	258
G.	Preparation of Other Enzyme Immunoconjugates.....	258
IV.	Coupling Proteins to Antibodies and Their Fragments	258
V.	Coupling Enzymes to Proteins and Antigens.....	259
A.	Conjugation of Enzymes and Proteins	259
B.	Conjugation of Enzymes and Antigens	259
VI.	Characterization of Conjugation Methods	260
	References.....	261

Chapter 11

Preparation of Immunotoxins and Other Drug Conjugates for Targeting

	Therapeutics.....	267
I.	Introduction.....	267
II.	Selection of Cross-Linking Reagents and Toxins	267
III.	Conjugation through Disulfide Bond.....	268
A.	Coupling with SPDP	269
1.	Preparation of Immunotoxins	269
2.	Preparation of Other Toxin Conjugates	269
B.	Coupling with Other Disulfide Generating Agents.....	271
1.	Use of Pyridyldisulfide	271
2.	Use of Cystamine	272
3.	Use of <i>S</i> -Sulfonate	273
4.	Use of Ellman's Reagent	273
5.	Use of Hindered Disulfide Bond.....	274
IV.	Conjugation through Thioether Linkage.....	275
A.	Use of Iodoacetyl Compounds.....	275
B.	Use of Amino and Thiol Directed Cross-Linkers	276
V.	Conjugation with Activated Chlorambucil	277
VI.	Conjugation with Acid-Labile and Photocleavable Cross-Linkers	278
A.	Use of Acid-Labile Cross-Linkers	278
B.	Use of Photocleavable Cross-Linkers.....	278
VII.	Conjugation through Carbohydrate Residues	279
A.	Use of Intrinsic Carbohydrate Moieties.....	279
B.	Use of Polysaccharide Spacers	279
VIII.	Preparation of Immunotoxins Using Avidin-Biotin Linkage.....	286
IX.	Miscellaneous Coupling Methods	286
A.	Direct Coupling	286
B.	Multi-Step Procedures	286
	References.....	288

Chapter 12

	Conjugation of Proteins to Solid Matrices	295
I.	Introduction.....	295
II.	Functionalities of Matrices.....	295
III.	Protein Immobilization by Matrix Activation	296
A.	Activation of Hydroxyl Groups.....	296

B.	Activation of Carboxyl Groups	300
C.	Activation of Acyl Hydrazide	300
D.	Activation of Amines.....	300
1.	Use of Nitrous Acid	300
2.	Use of Phosgene and Thiophosgene.....	302
3.	Use of Cyanogen Bromide.....	302
E.	Activation of Acrylonitrile	302
IV.	Cross-Linking Reagents Used in Protein Immobilization.....	303
A.	Zero-Length Cross-Linkers	303
B.	Homobifunctional Cross-Linkers	306
1.	Glutaraldehyde.....	306
2.	Chloroformates and Carbonyldiimidazole	307
3.	Heterocyclic Halides	307
4.	Bisoxiranes	308
5.	Divinylsulfone	308
6.	Quinone.....	309
7.	Transition Metal Ions	309
8.	Other Homobifunctional Cross-Linkers	310
C.	Heterobifunctional Cross-Linkers.....	310
1.	Monohalogenacetyl Halide.....	310
2.	Epichlorohydrin.....	310
3.	Amino and Sulfhydryl Group Directed Reagents.....	310
V.	Cross-Linking through Carbohydrate Chains	312
	References.....	314

Chapter 13

Other Applications and Future Prospects	319
I. Introduction.....	319
II. Application to Nucleic Acids	319
A. Cross-Linking DNA and RNA	319
B. DNA-Protein Conjugates	320
1. DNA Probes	320
2. DNA-Protein Interactions	320
C. RNA-Protein Cross-Linking	321
II. Cross-Linking Small Molecules to Proteins	321
III. Synopsis	322
References.....	322
Index	325
