Guided Tour xxx

PART I

LIFE AND DEATH OF MICROORGANISMS

CHAPTER ONE

Humans and the Microbial World 1

A Glimpse of History 1

Key Terms 2

- 1.1 The Origin of Microorganisms 1
Theory of Spontaneous Generation Revisited 2
- 1.2 Microbiology: A Human Perspective 6
Features of the Microbial World 6
Vital Activities of Microorganisms 6
Applications of Microbiology 6
Medical Microbiology 7
Microorganisms As Model Organisms 9
- 1.3 Members of The Microbial World 9
Bacteria 10
Archaea 10
Eucarya 10
Nomenclature 12
- 1.4 Viruses, Viroids, and Prions 12
- 1.5 Size in the Microbial World 14

PERSPECTIVE 1.1: The Long and the Short of It 15

FUTURE CHALLENGES: Entering a New Golden Age 16

SUMMARY 16

REVIEW QUESTIONS 17

CHAPTER TWO

The Molecules of Life 18

A Glimpse of History 18

Key Terms 19

- 2.1 Atoms and Elements 18
- 2.2 Chemical Bonds and the Formation of Molecules 20
Ionic Bonds 20
Covalent Bonds 21
Hydrogen Bonds 22
- 2.3 Chemical Components of the Cell 23
Water 23
pH 24
Small Molecules in the Cell 25
Macromolecules and Their Component Parts 25
- 2.4 Proteins and Their Functions 25
Amino Acid Subunits 26
Peptide Bonds and Their Synthesis 28
Protein Structure 28
Substituted Proteins 30
- 2.5 Carbohydrates 30
Monosaccharides 30
Disaccharides 32
Polysaccharides 32
- 2.6 Nucleic Acids 32
DNA 32
RNA 34
- 2.7 Lipids 35
Simple Lipids 35
Compound Lipids 36

PERSPECTIVE 2.1: Isotopes: Valuable Tools for the Study of Biological Systems 26

FUTURE CHALLENGES: Fold Properly: Do Not Bend or Mutilate 37

SUMMARY 37

REVIEW QUESTIONS 38

CHAPTER THREE

Microscopy and Cell Structure 40

A Glimpse of History 40

Key Terms 41

MICROSCOPY AND CELL MORPHOLOGY

- 3.1 Microscopic Techniques: The Instruments 41
 - Principles of Light Microscopy: The Bright-Field Microscope 41
 - Light Microscopes That Increase Contrast 43
 - Electron Microscopes 46
 - Atomic Force Microscopy 48
- 3.2 Microscopic Techniques: Dyes and Staining 48
 - Differential Stains 49
 - Special Stains to Observe Cell Structures 50
 - Fluorescent Dyes and Tags 51
- 3.3 Morphology of Prokaryotic Cells 52
 - Shapes 52
 - Groupings 53
 - Multicellular Associations 53

THE STRUCTURE OF THE PROKARYOTIC CELL

- 3.4 The Cytoplasmic Membrane 55
 - Structure and Chemistry of the Cytoplasmic Membrane 56
 - Permeability of the Cytoplasmic Membrane 56
 - The Role of the Cytoplasmic Membrane in Energy Transformation 57
- 3.5 Directed Movement of Molecules Across the Cytoplasmic Membrane 57
 - Transport Systems 58
 - Secretion 59
- 3.6 Cell Wall 59
 - Peptidoglycan 60
 - The Gram-Positive Cell Wall 61
 - The Gram-Negative Cell Wall 62
 - Antibacterial Substances that Target Peptidoglycan 63
 - Differences in Cell Wall Composition and the Gram Stain 63
 - Characteristics of Bacteria that Lack a Cell Wall 63
 - Cell Walls of the Domain *Archaea* 64
- 3.7 Capsules and Slime Layers 64
- 3.8 Filamentous Protein Appendages 65
 - Flagella 65
 - Pili 66
- 3.9 Internal Structures 67
 - The Chromosome 67
 - Plasmids 68

Ribosomes 68
 Cytoskeleton 68
 Storage Granules 68
 Gas Vesicles 68
 Endospores 69

THE EUKARYOTIC CELL

- 3.10 The Plasma Membrane 72
- 3.11 Transfer of Molecules Across the Plasma Membrane 73
 - Transport Proteins 73
 - Endocytosis and Exocytosis 73
 - Secretion 74
- 3.12 Protein Structures Within the Cell 74
 - Ribosomes 74
 - Cytoskeleton 74
 - Flagella and Cilia 74
- 3.13 Membrane-Bound Organelles 75
 - The Nucleus 75
 - Mitochondria 76
 - Chloroplasts 77
 - Endoplasmic Reticulum (ER) 77
 - The Golgi Apparatus 78
 - Lysosomes and Peroxisomes 79

PERSPECTIVE 3.1: The Origins of Mitochondria and Chloroplasts 77

FUTURE CHALLENGES: A Case of Breaking and Entering 79

SUMMARY 79

REVIEW QUESTIONS 81

CHAPTER FOUR

Dynamics of Prokaryotic Growth 83

A Glimpse of History 83

Key Terms 84

- 4.1 Principles of Prokaryotic Growth 84
- 4.2 Bacterial Growth in Nature 85
 - Biofilms 85
 - Interactions of Mixed Microbial Communities 86
- 4.3 Obtaining a Pure Culture 86
 - Cultivating Bacteria on a Solid Culture Medium 86
 - The Streak-Plate Method 87
 - Maintaining Stock Cultures 88
- 4.4 Bacterial Growth in Laboratory Conditions 88
 - The Growth Curve 88
 - Colony Growth 89
 - Continuous Culture 90

- 4.5 Environmental Factors That Influence Microbial Growth 90
 - Temperature Requirements 90
 - Oxygen (O₂) Requirements 91
 - pH 92
 - Water Availability 93
- 4.6 Nutritional Factors That Influence Microbial Growth 93
 - Required Elements 93
 - Growth Factors 94
 - Energy Sources 94
 - Nutritional Diversity 95
- 4.7 Cultivating Prokaryotes in the Laboratory 95
 - General Categories of Culture Media 95
 - Special Types of Culture Media 96
 - Providing Appropriate Atmospheric Conditions 97
 - Enrichment Cultures 98
- 4.8 Methods to Detect and Measure Bacterial Growth 99
 - Direct Cell Counts 99
 - Viable Cell Counts 100
 - Measuring Biomass 102
 - Detecting Cell Products 103

PERSPECTIVE 4.1: Can Prokaryotes Live on Only Rocks and Water? 94

FUTURE CHALLENGES: Seeing How the Other 99% Lives 104

SUMMARY 104

REVIEW QUESTIONS 105

CHAPTER FIVE

Control of Microbial Growth 107

A Glimpse of History 107

Key Terms 108

- 5.1 Approaches to Control 107
 - Principles of Control 108
 - Situational Considerations 108
- 5.2 Selection of an Antimicrobial Procedure 110
 - Type of Microorganism 110
 - Numbers of Microorganisms Initially Present 110
 - Environmental Conditions 111
 - Potential Risk of Infection 111
 - Composition of the Item 111
- 5.3 Using Heat to Destroy Microorganisms and Viruses 111
 - Moist Heat 112
 - Dry Heat 114

- 5.4 Using Other Physical Methods to Remove or Destroy Microbes 115
 - Filtration 115
 - Radiation 115
 - High Pressure 116
- 5.5 Using Chemicals to Destroy Microorganisms and Viruses 116
 - Potency of Germicidal Chemical Formulations 117
 - Selecting the Appropriate Germicidal Chemical 117
 - Classes of Germicidal Chemicals 118
- 5.6 Preservation of Perishable Products 121
 - Chemical Preservatives 122
 - Low-Temperature Storage 122
 - Reducing the Available Water 122

PERSPECTIVE 5.1: Contamination of an Operating Room by a Bacterial Pathogen 121

FUTURE CHALLENGES: Too Much of a Good Thing? 123

SUMMARY 123

REVIEW QUESTIONS 124

CHAPTER SIX

Metabolism: Fueling Cell Growth 126

A Glimpse of History 126

Key Terms 127

- 6.1 Principles of Metabolism 127
 - Harvesting Energy 128
 - Components of Metabolic Pathways 129
 - Precursor Metabolites 131
 - Overview of Metabolism 132
- 6.2 Enzymes 134
 - Mechanisms and Consequences of Enzyme Action 134
 - Cofactors and Coenzymes 135
 - Environmental Factors That Influence Enzyme Activity 136
 - Allosteric Regulation 137
 - Enzyme Inhibition 137
- 6.3 The Central Metabolic Pathways 138
 - Glycolysis 139
 - Pentose Phosphate Pathway 139
 - Transition Step 141
 - Tricarboxylic Acid (TCA) Cycle 142
- 6.4 Respiration 142
 - The Electron Transport Chain—Generating Proton Motive Force 143
 - ATP Synthase—Harvesting the Proton Motive Force to Synthesize ATP 145
 - ATP Yield of Aerobic Respiration in Prokaryotes 146

- 6.5 Fermentation 147
- 6.6 Catabolism of Organic Compounds Other Than Glucose 148
 - Polysaccharides and Disaccharides 149
 - Lipids 150
 - Proteins 150
- 6.7 Chemolithotrophs 150
- 6.8 Photosynthesis 151
 - Capturing Radiant Energy 152
 - Converting Radiant Energy into Chemical Energy 153
- 6.9 Carbon Fixation 154
 - Calvin Cycle 154
- 6.10 Anabolic Pathways—Synthesizing Subunits from Precursor Molecules 155
 - Lipid Synthesis 155
 - Amino Acid Synthesis 156
 - Nucleotide Synthesis 157

PERSPECTIVE 6.1: Mining with Microbes 151

FUTURE CHALLENGES: Going to Extremes 158

SUMMARY 158

REVIEW QUESTIONS 160

CHAPTER SEVEN

The Blueprint of Life, from DNA to Protein 161

A Glimpse of History 161

Key Terms 162

- 7.1 Overview 162
 - Characteristics of DNA 162
 - Characteristics of RNA 164
 - Regulating the Expression of Genes 164
- 7.2 DNA Replication 164
 - Initiation of DNA Replication 166
 - The Replication Fork 166
- 7.3 Gene Expression in Bacteria 168
 - Transcription 168
 - Translation 170
- 7.4 Differences Between Eukaryotic and Prokaryotic Gene Expression 175
- 7.5 Regulation of Bacterial Gene Expression 176
 - Principles of Regulation 176
 - Mechanisms to Control Transcription 176
 - The *lac* Operon As a Model for Control of Metabolic Pathways 177

- 7.6 Regulation of Eukaryotic Gene Expression 179
- 7.7 Sensing and Responding to Environmental Fluctuations 180
 - Signal Transduction 180
 - Natural Selection 181
- 7.8 Genomics 181
 - Analyzing a Prokaryotic DNA Sequence 181

PERSPECTIVE 7.1: RNA: The First Macromolecule? 175

FUTURE CHALLENGES: Gems in the Genomes? 182

SUMMARY 182

REVIEW QUESTIONS 183

CHAPTER EIGHT

Bacterial Genetics 185

A Glimpse of History 185

Key Terms 186

- 8.1 Genetic Change in Bacteria 186

GENE MUTATION AS A MECHANISM OF GENETIC CHANGE

- 8.2 Spontaneous Mutation 187
 - Base Substitution 188
 - Removal or Addition of Nucleotides 189
 - Transposable Elements (Jumping Genes) 189
- 8.3 Induced Mutations 190
 - Chemical Mutagens 190
 - Transposition 191
 - Radiation 192
- 8.4 Repair of Damaged DNA 192
 - Repair of Errors in Base Incorporation 192
 - Repair of Thymine Dimers 193
 - Repair of Modified Bases in DNA 193
 - SOS Repair 193
- 8.5 Mutant Selection 195
 - Direct Selection 195
 - Indirect Selection 195
 - Testing of Chemicals for Their Cancer-Causing Ability 196

GENE TRANSFER AS A MECHANISM OF GENETIC CHANGE

- 8.6 DNA-Mediated Transformation 199
 - Natural Competence 200
 - Artificial Competence 201
- 8.7 Transduction 201

- 8.8 Conjugation 202
 - Plasmid Transfer 202
 - Chromosome Transfer 203
 - F' Donors 204
- 8.9 The Mobile Gene Pool 205
 - Plasmids 205
 - Transposons 207
 - Genomic Islands 208

PERSPECTIVE 8.1: The Biological Function of DNA: A Discovery Ahead of Its Time 199

PERSPECTIVE 8.2: Bacteria Can Conjugate with Plants: A Natural Case of Genetic Engineering 206

FUTURE CHALLENGES: Hunting for Magic Bullets 208

SUMMARY 209

REVIEW QUESTIONS 210

CHAPTER NINE

Biotechnology and Recombinant DNA 212

A Glimpse of History 212

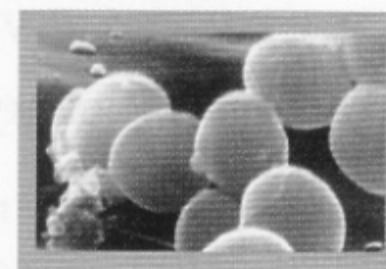

Key Terms 213

- 9.1 Fundamental Tools Used in Biotechnology 213
 - Restriction Enzymes 213
 - Gel Electrophoresis 214
- 9.2 Applications of Genetic Engineering 215
 - Genetically Engineered Bacteria 215
 - Genetically Engineered Eukaryotes 217
- 9.3 Techniques Used in Genetic Engineering 218
 - Obtaining DNA 218
 - Generating a Recombinant DNA Molecule 218
 - Introducing the Recombinant DNA into a New Host 220
- 9.4 Concerns Regarding Genetic Engineering and Other DNA Technologies 221
- 9.5 DNA Sequencing 221
 - Techniques Used in DNA Sequencing 221
- 9.6 Polymerase Chain Reaction (PCR) 223
 - Techniques Used in PCR 224
 - The Three-Step Amplification Cycle 224
- 9.7 Probe Technologies 227
 - Colony Blotting 228
 - Fluorescence *in situ* Hybridization (FISH) 228
 - DNA Microarrays 228

PERSPECTIVE 9.1: Science Takes the Witness Stand 225

SUMMARY 230

REVIEW QUESTIONS 230

PART II THE MICROBIAL WORLD

CHAPTER TEN

Identification and Classification of Prokaryotic Organisms 232

A Glimpse of History 232

Key Terms 233

- 10.1 Principles of Taxonomy 233
 - Strategies Used to Identify Prokaryotes 233
 - Strategies Used to Classify Prokaryotes 233
 - Nomenclature 235
- 10.2 Using Phenotypic Characteristics to Identify Prokaryotes 237
 - Microscopic Morphology 237
 - Metabolic Capabilities 238
 - Serology 240
 - Fatty Acid Analysis (FAME) 240
- 10.3 Using Genotypic Characteristics to Identify Prokaryotes 241
 - Detecting Specific Nucleotide Sequences Using Nucleic Acid Probes 242
 - Amplifying Specific DNA Sequences Using the Polymerase Chain Reaction 242
 - Sequencing Ribosomal RNA Genes 242
- 10.4 Characterizing Strain Differences 243
 - Biochemical Typing 243
 - Serological Typing 243
 - Genomic Typing 243
 - Phage Typing 244
 - Antibiograms 245
- 10.5 Classifying Prokaryotes 246
 - 16S rDNA Sequence Analysis 246
 - DNA Hybridization 247
 - DNA Base Ratio (G + C Content) 248
 - Phenotypic Methods 248

PERSPECTIVE 10.1: Tracing the Source of an Outbreak of Foodborne Disease 244

FUTURE CHALLENGES: Tangled Branches in the Phylogenetic Tree 249

SUMMARY 249

REVIEW QUESTIONS 250

CHAPTER ELEVEN

The Diversity of Prokaryotic Organisms 251

A Glimpse of History 251

Key Terms 252

METABOLIC DIVERSITY

- 11.1 Anaerobic Chemotrophs 253
 - Anaerobic Chemolithotrophs 253
 - Anaerobic Chemoorganotrophs—Anaerobic Respiration 254
 - Anaerobic Chemoorganotrophs—Fermentation 254
- 11.2 Anoxygenic Phototrophs 256
 - The Purple Bacteria 256
 - The Green Bacteria 257
 - Other Anoxygenic Phototrophs 257
- 11.3 Oxygenic Phototrophs 257
 - The Cyanobacteria 258
- 11.4 Aerobic Chemolithotrophs 259
 - The Sulfur-Oxidizing Bacteria 259
 - The Nitrifiers 260
 - The Hydrogen-Oxidizing Bacteria 260
- 11.5 Aerobic Chemoorganotrophs 261
 - Obligate Aerobes 261
 - Facultative Anaerobes 262

ECOPHYSIOLOGICAL DIVERSITY

- 11.6 Thriving in Terrestrial Environments 263
 - Bacteria That Form a Resting Stage 264
 - Bacteria That Associate with Plants 267
- 11.7 Thriving in Aquatic Environments 266
 - Sheathed Bacteria 266
 - Prosthecate Bacteria 266
 - Bacteria That Derive Nutrients from Other Organisms 267
 - Bacteria That Move by Unusual Mechanisms 269
 - Bacteria That Form Storage Granules 270
- 11.8 Animals As Habitats 270
 - Bacteria That Inhabit the Skin 270
 - Bacteria That Inhabit Mucous Membranes 272
 - Obligate Intracellular Parasites 273
- 11.9 Archaea That Thrive in Extreme Conditions 275
 - Extreme Halophiles 275
 - Extreme Thermophiles 275

FUTURE CHALLENGES: Astrobiology: The Search for Life on Other Planets 276

SUMMARY 277

REVIEW QUESTIONS 278

CHAPTER TWELVE

The Eukaryotic Members of the Microbial World 280

A Glimpse of History 280

Key Terms 281

- 12.1 Algae 281
 - Classification of Algae 282
 - Algal Habitats 282
 - Structure of Algae 282
 - Algal Reproduction 283
 - Paralytic Shellfish Poisoning 284
- 12.2 Protozoa 285
 - Classification of Protozoa 285
 - Protozoan Habitats 286
 - Structure of Protozoa 287
 - Protozoan Reproduction 287
 - Protozoa and Human Disease 288
- 12.3 Fungi 288
 - Classification of Fungi 288
 - Fungal Habitats 290
 - Fungal Disease in Humans 292
 - Symbiotic Relationships Between Fungi and Other Organisms 292
 - Economic Importance of Fungi 293
- 12.4 Slime Molds and Water Molds 294
 - Plasmodial and Cellular Slime Molds 294
 - Oomycetes (Water Molds) 294
- 12.5 Multicellular Parasites: Arthropods and Helminths 295
 - Arthropods 295
 - Helminths 297

PERSPECTIVE 12.1: How Marine Phytoplankton Help Combat Global Warming 285

FUTURE CHALLENGES: The Continued Fight to Eradicate Malaria 299

SUMMARY 300

REVIEW QUESTIONS 301

CHAPTER THIRTEEN

Viruses of Bacteria 302

A Glimpse of History 302

Key Terms 303

- 13.1 General Characteristics of Viruses 302
 - Virus Architecture 303

- The Viral Genome 304
- Replication Cycle—Overall Features 304
- 13.2** Phage Interactions with Host Cells 306
 - Lytic Phage Replication by Double-Stranded DNA Phages 306
 - Lytic Single-Stranded RNA Phages 308
 - Phage Replication in a Latent State—Phage Lambda 308
 - Extrusion Following Phage Replication—Filamentous Phages 311
 - Lytic Infection by Single-Stranded DNA Phages 311
- 13.3** Transduction 313
 - Generalized Transduction 313
 - Specialized Transduction 313
- 13.4** Host Range of Phages 314
 - Receptors on the Bacterial Surface 314
 - Restriction-Modification System 314

PERSPECTIVE 13.1: Microbe Mimicker 305

PERSPECTIVE 13.2: Viral Soup 309

FUTURE CHALLENGES: Take Two Phage and Call Me in the Morning 316

SUMMARY 316

REVIEW QUESTIONS 318

CHAPTER FOURTEEN

Viruses, Prions, and Viroids: Infectious Agents of Animals and Plants 320

A Glimpse of History 320

Key Terms 321

- 14.1** Structure and Classification of Animal Viruses 321
 - Classification of Animal Viruses 321
 - Groupings Based on Routes of Transmission 322
- 14.2** Interactions of Animal Viruses with their Hosts 325
 - Acute Infections 325
 - Persistent Infections 329
- 14.3** Viruses and Human Tumors 333
 - Retroviruses and Human Tumors 333
- 14.4** Viral Genetic Alterations 335
 - Genome Exchange in Segmented Viruses 335
- 14.5** Methods Used to Study Viruses 336
 - Cultivation of Host Cells 336
 - Quantitation 337
- 14.6** Plant Viruses 339
 - Spread of Plant Viruses 339
 - Insect Transmission of Plant Viruses 340

- 14.7** Other Infectious Agents 340
 - Prions 341
 - Viroids 342

PERSPECTIVE 14.1: A Whodunit in Molecular Virology 336

FUTURE CHALLENGES: Great Promise, Greater Challenges 343

SUMMARY 343

REVIEW QUESTIONS 344

PART III MICROORGANISMS AND HUMANS

CHAPTER FIFTEEN

The Innate Immune Response 346

A Glimpse of History 346

Key Terms 347

- 15.1** Overview of the Innate Defenses 347
- 15.2** First-Line Defenses 348
 - Physical Barriers 348
 - Antimicrobial Substances 348
 - Normal Microbiota (Flora) 349
- 15.3** The Cells of the Immune System 350
 - Granulocytes 350
 - Mononuclear Phagocytes 350
 - Dendritic Cells 352
 - Lymphocytes 352
- 15.4** Cell Communication 353
 - Surface Receptors 353
 - Cytokines 353
 - Adhesion Molecules 354
- 15.5** Sensor Systems 354
 - Toll-Like Receptors and NOD Proteins 355
 - The Complement System 355
 - Sensors That Detect Long Double-Stranded RNA (dsRNA) 357
- 15.6** Phagocytosis 358
 - The Process of Phagocytosis 358
 - Specialized Attributes of Macrophages 358
 - Specialized Attributes of Neutrophils 359
- 15.7** Inflammation—A Coordinated Response to Invasion or Damage 360
 - Factors That Initiate the Inflammatory Response 360

- The Inflammatory Process 360
- Outcomes of Inflammation 361
- Apoptosis—Controlled Cell Death That Circumvents the Inflammatory Process 362

15.8 Fever 362

PERSPECTIVE 15.1: For *Schistosoma*, the Inflammatory Response Delivers 362

SUMMARY 363

REVIEW QUESTIONS 364

CHAPTER SIXTEEN

The Adaptive Immune Response 366

A Glimpse of History 366

Key Terms 367

- 16.1** Strategy of the Adaptive Immune Response 367
 - Overview of Humoral Immunity 367
 - Overview of Cellular Immunity 368
- 16.2** Anatomy of the Lymphoid System 369
 - Lymphatic Vessels 370
 - Secondary Lymphoid Organs 370
 - Primary Lymphoid Organs 370
- 16.3** The Nature of Antigens 370
- 16.4** The Nature of Antibodies 371
 - Structure and Properties of Antibodies 371
 - Protective Outcomes of Antibody-Antigen Binding 372
 - Immunoglobulin Classes 373
- 16.5** Clonal Selection and Expansion of Lymphocytes 375
- 16.6** B Lymphocytes and the Antibody Response 376
 - B-Cell Activation 377
 - Characteristics of the Primary Response 377
 - Characteristics of the Secondary Response 379
 - The Response to T-Independent Antigens 379
- 16.7** T Lymphocytes: Antigen Recognition and Response 379
 - General Characteristics of T Cells 380
 - Activation of T Cells 381
 - Functions of T_C (CD8) Cells 382
 - Functions of T_H (CD4) Cells 383
 - Subsets of Dendritic Cells and T Cells 383
- 16.8** Natural Killer (NK) Cells 384
- 16.9** Lymphocyte Development 385
 - Generation of Diversity 387
 - Negative Selection of Self-Reactive B Cells 387

- Positive and Negative Selection of Self-Reactive T Cells 387

PERSPECTIVE 16.1: What Flavor Are Your Major Histocompatibility Complex Molecules? 385

SUMMARY 388

REVIEW QUESTIONS 389

CHAPTER SEVENTEEN

Host-Microbe Interactions 391

A Glimpse of History 391

Key Terms 392

MICROBES, HEALTH, AND DISEASE

- 17.1** The Anatomical Barriers As Ecosystems 392
 - Symbiotic Relationships Between Microorganisms and Hosts 392
- 17.2** The Normal Microbiota 393
 - The Protective Role of the Normal Microbiota 393
 - The Dynamic Nature of the Normal Microbiota 393
- 17.3** Principles of Infectious Diseases 394
 - Pathogenicity 394
 - Characteristics of Infectious Disease 394
- 17.4** Establishing the Cause of Infectious Disease 395
 - Koch's Postulates 396
 - Molecular Koch's Postulates 396

MECHANISMS OF PATHOGENESIS

- 17.5** Establishment of Infection 397
 - Adherence 397
 - Colonization 398
 - Delivery of Effector Molecules to Host Cells 398
- 17.6** Invasion—Breaching the Anatomical Barriers 399
 - Penetration of Skin 399
 - Penetration of Mucous Membranes 399
- 17.7** Avoiding the Host Defenses 400
 - Hiding Within a Host Cell 400
 - Avoiding Killing by Complement System Proteins 400
 - Avoiding Destruction by Phagocytes 401
 - Avoiding Antibodies 403
- 17.8** Damage to the Host 403
 - Exotoxins 403

Endotoxin and Other Bacterial Cell Wall Components 407
 Damaging Effects of the Immune Response 408

- 17.9 Mechanisms of Viral Pathogenesis 408
 Binding to Host Cells and Invasion 408
 Avoiding Immune Responses 409
- 17.10 Mechanisms of Eukaryotic Pathogenesis 410
 Fungi 410
 Protozoa and Helminths 410

FUTURE CHALLENGES: The Potential of Probiotics 411

SUMMARY 411

REVIEW QUESTIONS 412

CHAPTER EIGHTEEN

Immunologic Disorders 414

A Glimpse of History 414

Key Terms 415

- 18.1 Type I Hypersensitivities: Immediate
 IgE-Mediated 415
 Localized Anaphylaxis 416
 Generalized Anaphylaxis 417
 Treatments to Prevent Allergic Reactions 417
- 18.2 Type II Hypersensitivities: Cytotoxic 418
 Transfusion Reactions 418
 Hemolytic Disease of the Newborn 418
- 18.3 Type III Hypersensitivities: Immune
 Complex—Mediated 420
- 18.4 Type IV Hypersensitivities: Delayed
 Cell-Mediated 421
 Tuberculin Skin Test 421
 Delayed Hypersensitivity in Infectious Diseases 422
 Contact Hypersensitivities 422
- 18.5 Rejection of Transplanted Tissues 423
- 18.6 Autoimmune Diseases 424
 The Spectrum of Autoimmune Reactions 425
 Treatment of Autoimmune Diseases 425
- 18.7 Immunodeficiency Disorders 426
 Primary Immunodeficiencies 426
 Secondary Immunodeficiencies 427

PERSPECTIVE 18.1: The Fetus As an Allograft 423

FUTURE CHALLENGES: New Approaches to Correcting Immunologic Disorders 428

SUMMARY 428

REVIEW QUESTIONS 429

CHAPTER NINETEEN

Applications of Immune Responses 431

A Glimpse of History 431

Key Terms 432

IMMUNIZATION

- 19.1 Principles of Immunization 432
 Active Immunity 432
 Passive Immunity 432
- 19.2 Vaccines and Immunization Procedures 433
 Attenuated Vaccines 433
 Inactivated Vaccines 435
 An Example of Vaccination Strategy—The Campaign to Eliminate Poliomyelitis 436
 The Importance of Routine Immunizations for Children 436
 Current Progress in Immunization 437

IMMUNOLOGICAL TESTING

- 19.3 Principles of Immunological Testing 439
 Obtaining Antibodies 439
 Quantifying Antigen-Antibody Reactions 439
- 19.4 Observing Antigen-Antibody Aggregations 441
 Precipitation Reactions 441
 Agglutination Reactions 443
- 19.5 Using Labeled Antibodies to Detect Antigen-Antibody Interactions 444
 Fluorescent Antibody (FA) Tests 444
 Enzyme-Linked Immunosorbent Assay (ELISA) 445
 Western Blotting 446
 Fluorescence-Activated Cell Sorter (FACS) 447

PERSPECTIVE 19.1: Monoclonal Antibodies 440

FUTURE CHALLENGES: Global Immunization 447

SUMMARY 447

REVIEW QUESTIONS 448

CHAPTER TWENTY

Epidemiology 450

A Glimpse of History 450

Key Terms 451

- 20.1 Principles of Epidemiology 451
 Rate of Disease in a Population 451
 Reservoirs of Infection 453
 Portals of Exit 454

Transmission 454
 Portals of Entry 455
 Factors That Influence the Epidemiology
 of Disease 455

- 20.2** Epidemiological Studies 457
 - Descriptive Studies 457
 - Analytical Studies 458
 - Experimental Studies 458
- 20.3** Infectious Disease Surveillance 459
 - National Disease Surveillance Network 459
 - Worldwide Disease Surveillance 460
- 20.4** Trends in Disease 460
 - Reduction and Eradication of Disease 460
 - Emerging Diseases 461
- 20.5** Healthcare-Associated Infections 462
 - Reservoirs of Infectious Agents in Healthcare Settings 462
 - Transmission of Infectious Agents in Healthcare Settings 464
 - Preventing Healthcare-Associated Infections 464

PERSPECTIVE 20.1: Standard Precautions—Protecting Patients and Healthcare Personnel 465

FUTURE CHALLENGES: Maintaining Vigilance Against Bioterrorism 466

SUMMARY 466

REVIEW QUESTIONS 467

CHAPTER TWENTY ONE

Antimicrobial Medications 469

A Glimpse of History 469

Key Terms 470

- 21.1** History and Development of Antimicrobial Drugs 469
 - Discovery of Antimicrobial Drugs 469
 - Discovery of Antibiotics 470
 - Development of New Generations of Drugs 470
- 21.2** Features of Antimicrobial Drugs 471
 - Selective Toxicity 471
 - Antimicrobial Action 471
 - Spectrum of Activity 471
 - Effects of Combinations of Antimicrobial Drugs 472
 - Tissue Distribution, Metabolism, and Excretion of the Drug 472
 - Adverse Effects 472
 - Resistance to Antimicrobials 472

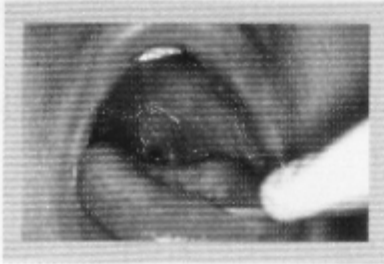

- 21.3** Mechanisms of Action of Antibacterial Drugs 473
 - Antibacterial Medications That Inhibit Cell Wall Synthesis 475
 - Antibacterial Medications That Inhibit Protein Synthesis 477
 - Antibacterial Medications That Inhibit Nucleic Acid Synthesis 478
 - Antibacterial Medications That Inhibit Metabolic Pathways 478
 - Antibacterial Medications That Interfere with Cell Membrane Integrity 479
 - Antibacterial Medications That Interfere with Processes Essential to *Mycobacterium tuberculosis* 479
- 21.4** Determining the Susceptibility of a Bacterial Strain to an Antimicrobial Drug 480
 - Determining the Minimum Inhibitory and Bactericidal Concentrations 480
 - Conventional Disc Diffusion Method 481
 - Commercial Modifications of Antimicrobial Susceptibility Testing 482
- 21.5** Resistance to Antimicrobial Drugs 483
 - Mechanisms of Acquired Resistance 483
 - Acquisition of Resistance 484
 - Examples of Emerging Antimicrobial Resistance 484
 - Slowing the Emergence and Spread of Antimicrobial Resistance 485
- 21.6** Mechanisms of Action of Antiviral Drugs 486
 - Entry Inhibitors 486
 - Viral Uncoating 486
 - Nucleic Acid Synthesis 487
 - Integrase Inhibitors 488
 - Assembly and Release of Viral Particles 488
- 21.7** Mechanisms of Action of Antifungal Drugs 488
 - Plasma Membrane Synthesis and Function 488
 - Cell Wall Synthesis 489
 - Cell Division 489
 - Nucleic Acid Synthesis 489
- 21.8** Mechanisms of Action of Antiprotozoan and Anthelmintic Drugs 490

PERSPECTIVE 21.1: Measuring the Concentration of an Antimicrobial Drug in Blood or Other Body Fluids 481

FUTURE CHALLENGES: War with the Superbugs 491

SUMMARY 491

REVIEW QUESTIONS 493

PART IV INFECTIOUS DISEASES

CHAPTER TWENTY TWO

Respiratory System Infections 495

A Glimpse of History 495

Key Terms 496

- 22.1 Anatomy and Physiology 495
The Mucociliary Escalator 498

- 22.2 Normal Microbiota 498

INFECTIONS OF THE UPPER RESPIRATORY SYSTEM

- 22.3 Bacterial Infections of the Upper Respiratory System 499
Strep Throat (Streptococcal Pharyngitis) 499
Diphtheria 502
Pinkeye, Earache, and Sinus Infections 504
- 22.4 Viral Infections of the Upper Respiratory System 507
The Common Cold 507
Adenoviral Pharyngitis 508

INFECTIONS OF THE LOWER RESPIRATORY SYSTEM

- 22.5 Bacterial Infections of the Lower Respiratory System 509
Pneumococcal Pneumonia 509
Klebsiella Pneumonia 511
Mycoplasmal Pneumonia 511
Whooping Cough (Pertussis) 513
Tuberculosis 514
Legionnaires' Disease 517
- 22.6 Viral Infections of the Lower Respiratory System 519
Influenza 519
Respiratory Syncytial Virus Infections 521
Hantavirus Pulmonary Syndrome 522
- 22.7 Fungal Infections of the Lung 525
Valley Fever (Coccidioidomycosis) 525
Spelunkers' Disease (Histoplasmosis) 526

PERSPECTIVE 22.1: Terror by Mail: Inhalation Anthrax 512

PERSPECTIVE 22.2: What to Do About Bird Flu 524

FUTURE CHALLENGES: Global Preparedness vs. Emerging Respiratory Viruses 528

SUMMARY 528

REVIEW QUESTIONS 529

CHAPTER TWENTY THREE

Skin Infections 531

A Glimpse of History 531

Key Terms 532

- 23.1 Anatomy and Physiology 531
- 23.2 Normal Microbiota of the Skin 533
Diphtheroids 533
Staphylococci 534
Fungi 534
- 23.3 Bacterial Skin Diseases 535
Hair Follicle Infections 535
Scalded Skin Syndrome 537
Streptococcal Impetigo 538
Rocky Mountain Spotted Fever 540
Lyme Disease 542
- 23.4 Skin Diseases Caused by Viruses 545
Chickenpox (Varicella) 545
Measles (Rubeola) 547
German Measles (Rubella) 549
Other Viral Rashes of Childhood 552
Warts 552
- 23.5 Skin Diseases Caused by Fungi 554
Superficial Cutaneous Mycoses 554

CASE PRESENTATION 551

PERSPECTIVE 23.1: The Ghost of Smallpox, An Evil Shade 554

FUTURE CHALLENGES: The Ecology of Lyme Disease 556

SUMMARY 556

REVIEW QUESTIONS 557

CHAPTER TWENTY FOUR

Wound Infections 559

A Glimpse of History 559

Key Terms 560

- 24.1 Anatomy and Physiology 560
Wound Abscesses 560
Anaerobic Wounds 561
- 24.2 Common Bacterial Wound Infections 562
Staphylococcal Wound Infections 562
Group A Streptococcal "Flesh Eaters" 563
Pseudomonas aeruginosa Infections 564

- 24.3** Diseases Due to Anaerobic Bacterial Wound Infections 566
 "Lockjaw" (Tetanus) 566
 Gas Gangrene (Clostridial Myonecrosis) 568
 "Lumpy Jaw" (Actinomycosis) 570
- 24.4** Bacterial Bite Wound Infections 572
Pasteurella multocida Bite Wound Infections 572
 Cat Scratch Disease 572
 Streptobacillary Rat Bite Fever 574
 Human Bites 574
- 24.5** Fungal Wound Infections 576
 "Rose Gardener's Disease" (Sporotrichosis) 576

CASE PRESENTATION 573

PERSPECTIVE 24.1: Infection Caused by a Human "Bite" 575

FUTURE CHALLENGES: Staying Ahead in the Race with *Staphylococcus aureus* 578

SUMMARY 578

REVIEW QUESTIONS 579

CHAPTER TWENTY FIVE

Digestive System Infections 581

A Glimpse of History 581

Key Terms 582

- 25.1** Anatomy and Physiology 582
 The Mouth 582
 Salivary Glands 582
 The Esophagus 583
 The Stomach 584
 The Small Intestine 584
 The Pancreas 584
 The Liver 584
 The Large Intestine 585
- 25.2** Normal Microbiota 585
 The Mouth 585
 The Intestines 585

UPPER DIGESTIVE SYSTEM INFECTIONS

- 25.3** Bacterial Diseases of the Upper Digestive System 586
 Tooth Decay (Dental Caries) 586
 Periodontal Disease 588
 Trench Mouth 588
Helicobacter pylori Gastritis 589
- 25.4** Viral Diseases of the Upper Digestive System 592
 Herpes Simplex (Cold Sores or Fever Blisters) 592
 Mumps 593

LOWER DIGESTIVE SYSTEM INFECTIONS

- 25.5** Bacterial Diseases of the Lower Digestive System 595
 Cholera 596
 Shigellosis 598
Escherichia coli Gastroenteritis 599
 Salmonellosis 601
 Campylobacteriosis 602
- 25.6** Viral Diseases of the Lower Digestive System 604
 Rotaviral Gastroenteritis 604
 Norovirus Gastroenteritis 604
 Hepatitis A 605
 Hepatitis B 606
 Hepatitis C 608
- 25.7** Protozoan Diseases of the Lower Digestive System 609
 Giardiasis 609
 Cryptosporidiosis 610
 Cyclosporiasis 612
 Amebiasis 612

CASE PRESENTATION 591

PERSPECTIVE 25.1: Ecology of Cholera 597

FUTURE CHALLENGES: Defeating Diarrhea 614

SUMMARY 614

REVIEW QUESTIONS 616

CHAPTER TWENTY SIX

Genitourinary Infections 618

A Glimpse of History 618

Key Terms 619

- 26.1** Anatomy and Physiology 619
 The Urinary System 619
 The Genital System 620
- 26.2** Normal Microbiota of the Genitourinary System 620
- 26.3** Urinary System Infections 621
 Bacterial Cystitis 621
 Leptospirosis 622
- 26.4** Genital System Diseases 625
 Bacterial Vaginosis 625
 Vulvovaginal Candidiasis 625
 Staphylococcal Toxic Shock Syndrome 626
- 26.5** Sexually Transmitted Diseases: Scope of the Problem 628
- 26.6** Bacterial STDs 629
 Gonorrhea 629

Chlamydial Genital System Infections 631

Syphilis 633

Chancroid 636

26.7 Viral STDs 638

Genital Herpes Simplex 638

Papillomavirus STDs: Genital Warts and Cervical Cancer 639

AIDS 640

26.8 Protozoal STDs 642

"Trich" (Trichomoniasis) 642

CASE PRESENTATION 623

PERSPECTIVE 26.1: The Demise of Syphilis? 634

FUTURE CHALLENGES: Getting Control of Sexually Transmitted Diseases 643

SUMMARY 644

REVIEW QUESTIONS 645

CHAPTER TWENTY SEVEN

Nervous System Infections 647

A Glimpse of History 647

Key Terms 648

27.1 Anatomy and Physiology 648

Pathways to the Central Nervous System 649

27.2 Bacterial Nervous System Infections 650

Meningococcal Meningitis 650

Listeriosis 653

Hansen's Disease (Leprosy) 655

Botulism 657

27.3 Viral Diseases of the Nervous System 658

Viral Meningitis 659

Viral Encephalitis 659

Infantile Paralysis, Polio (Poliomyelitis) 661

Rabies 663

27.4 Fungal Diseases of the Nervous System 666

Cryptococcal Meningoencephalitis 666

27.5 Protozoan Diseases of the Nervous System 667

African Sleeping Sickness 667

27.6 Transmissible Spongiform Encephalopathies 669

Transmissible Spongiform Encephalopathy in Humans 669

CASE PRESENTATION 651

PERSPECTIVE 27.1: A Rabies Survivor! 665

FUTURE CHALLENGES: Eradicate Polio: Then What? 670

SUMMARY 671

REVIEW QUESTIONS 672

CHAPTER TWENTY EIGHT

Blood and Lymphatic Infections 674

A Glimpse of History 674

Key Terms 675

28.1 Anatomy and Physiology 675

The Heart 675

Arteries 676

Veins 676

Lymphatics (Lymphatic Vessels) 676

Spleen 677

28.2 Bacterial Diseases of the Blood Vascular System 677

Subacute Bacterial Endocarditis 677

Gram-Negative Septicemia 678

28.3 Bacterial Diseases of the Lymph Nodes and Spleen 680

"Rabbit Fever" (Tularemia) 680

"Undulant Fever" (Brucellosis, "Bang's Disease") 681

"Black Death" (Plague) 682

28.4 Viral Diseases of the Lymphoid and Blood Vascular Systems 686

"Kissing Disease" (Infectious Mononucleosis, "Mono") 686

Yellow Fever 688

28.5 Protozoan Diseases 690

Malaria 691

CASE PRESENTATION 688

PERSPECTIVE 28.1: Arteriosclerosis: The Infection Hypothesis 676

PERSPECTIVE 28.2: Walter Reed and Yellow Fever 690

FUTURE CHALLENGES: Rethinking Malaria Control 694

SUMMARY 694

REVIEW QUESTIONS 695

CHAPTER TWENTY NINE

HIV Disease and Complications of Immunodeficiency 697

A Glimpse of History 697

Key Terms 698

29.1 Human Immunodeficiency Virus (HIV) Infection and AIDS 698

HIV Disease 699

HIV Vaccine Prospects 709

29.2 Malignant Tumors That Complicate Acquired Immunodeficiencies 710

Kaposi's Sarcoma 710

B-Lymphocytic Tumors of the Brain 711

Cervical and Anal Carcinoma 711

- 29.3** Infectious Complications of Acquired Immunodeficiency 712
 Pneumocystosis 712
 Toxoplasmosis 713
 Cytomegalovirus Disease 715
 Mycobacterial Diseases 717

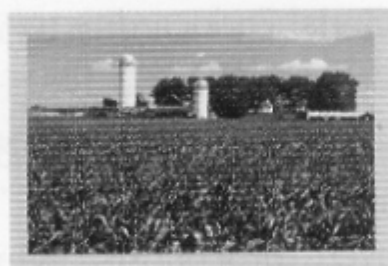

CASE PRESENTATION 707

PERSPECTIVE 29.1: Origin of AIDS-Causing Viruses 705

FUTURE CHALLENGES: AIDS and Poverty 718

SUMMARY 719

REVIEW QUESTIONS 720

PART V
APPLIED MICROBIOLOGY

CHAPTER THIRTY

Microbial Ecology 721

A Glimpse of History 721

Key Terms 722

- 30.1** Principles of Microbial Ecology 722
 Nutrient Acquisition 722
 Bacteria in Low-Nutrient Environments 723
 Microbial Competition and Antagonism 723
 Microorganisms and Environmental Changes 723
 Microbial Communities 724
 Studying Microbial Ecology 724
- 30.2** Aquatic Habitats 725
 Marine Environments 726
 Freshwater Environments 726
 Specialized Aquatic Environments 726
- 30.3** Terrestrial Habitats 727
 Characteristics of Soil 727
 Microorganisms in Soil 727
 The Rhizosphere 728
- 30.4** Biogeochemical Cycling and Energy Flow 728
 Carbon Cycle 728
 Nitrogen Cycle 730
 Sulfur Cycle 731
 Phosphorus Cycle and Other Cycles 732
 Energy Sources for Ecosystems 732

- 30.5** Mutualistic Relationships between Microorganisms and Eukaryotes 733
 Mycorrhizae 733
 Symbiotic Nitrogen-Fixers and Plants 734
 Microorganisms and Herbivores 735
 SUMMARY 735
 REVIEW QUESTIONS 736

CHAPTER THIRTY ONE

Environmental Microbiology: Treatment of Water, Wastes, and Polluted Habitats 738

A Glimpse of History 738

Key Terms 739

- 31.1** Microbiology of Wastewater Treatment 739
 Biochemical Oxygen Demand (BOD) 739
 Municipal Wastewater Treatment Methods 739
 Individual Wastewater Treatment Systems 744
- 31.2** Drinking Water Treatment and Testing 744
 Water Treatment Processes 745
 Water Testing 746
- 31.3** Microbiology of Solid Waste Treatment 747
 Sanitary Landfills for Solid Waste Disposal 747
 Municipal and Backyard Composting—Alternative to Landfills 747
- 31.4** Microbiology of Bioremediation 749
 Pollutants 749
 Means of Bioremediation 749

PERSPECTIVE 31.1: Now They're Cooking with Gas 743

FUTURE CHALLENGES: Better Identification of Pathogens in Water and Wastes 750

SUMMARY 751

REVIEW QUESTIONS 751

CHAPTER THIRTY TWO

Food Microbiology 753

A Glimpse of History 753

Key Terms 754

- 32.1** Factors Influencing the Growth of Microorganisms in Foods 754
 Intrinsic Factors 755
 Extrinsic Factors 755
- 32.2** Microorganisms in Food and Beverage Production 756
 Lactic Acid Fermentations by the Lactic Acid Bacteria 756

Alcoholic Fermentations by Yeast 758

Changes Due to Mold Growth 761

32.3 Food Spoilage 762

Common Spoilage Bacteria 762

Common Spoilage Fungi 762

32.4 Foodborne Illness 762

Foodborne Intoxication 763

Foodborne Infection 764

32.5 Food Preservation 765

PERSPECTIVE 32.1: Botox for Beauty and Pain Relief 764

FUTURE CHALLENGES: Using Microorganisms to Nourish the World 766
