

About the Author	v
Preface	xv
Acknowledgments	xix
Guide to Experimental Techniques in Molecular Biology	xxi

PART I**Introduction**

- 1 A Brief History 1
- 2 The Molecular Nature of Genes 12
- 3 An Introduction to Gene Function 31

PART II**Methods in Molecular Biology**

- 4 Molecular Cloning Methods 51
- 5 Molecular Tools for Studying Genes and Gene Activity 83

PART III**Transcription in Bacteria**

- 6 The Mechanism of Transcription in Bacteria 126
- 7 Operons: Fine Control of Bacterial Transcription 172
- 8 Major Shifts in Bacterial Transcription 202
- 9 DNA-Protein Interactions in Bacteria 228

PART IV**Transcription in Eukaryotes**

- 10 Eukaryotic RNA Polymerases and Their Promoters 250
- 11 General Transcription Factors in Eukaryotes 280
- 12 Transcription Activators in Eukaryotes 321
- 13 Chromatin Structure and Its Effects on Transcription 359

PART V**Posttranscriptional Events**

- 14 Messenger RNA Processing I: Splicing 399
- 15 Messenger RNA Processing II: Capping and Polyadenylation 444
- 16 Other RNA Processing Events 481

PART VI**Translation**

- 17 The Mechanism of Translation I: Initiation 521
- 18 The Mechanism of Translation II: Elongation and Termination 564
- 19 Ribosomes and Transfer RNA 607

PART VII**DNA Replication, Recombination, and Transposition**

- 20 DNA Replication I: Basic Mechanism and Enzymology 639
- 21 DNA Replication II: Detailed Mechanism 683
- 22 Homologous Recombination 718
- 23 Transposition 743

PART VIII**Genomes**

- 24 Genomics, Proteomics, and Bioinformatics 770

Glossary 829

Index 857

About the Author	v
Preface	xv

Guide to Experimental Techniques in Molecular Biology	xxi

PART I

Introduction

CHAPTER 1

A Brief History 1

- 1.1 Transmission Genetics 2
 - Mendel's Laws of Inheritance 2
 - The Chromosome Theory of Inheritance 3
 - Genetic Recombination and Mapping 4
 - Physical Evidence for Recombination 5
- 1.2 Molecular Genetics 5
 - The Discovery of DNA 5
 - The Relationship Between Genes and Proteins 6
 - Activities of Genes 7
- 1.3 The Three Domains of Life 9

CHAPTER 2

The Molecular Nature of Genes 12

- 2.1 The Nature of Genetic Material 13
 - Transformation in Bacteria 13
 - The Chemical Nature of Polynucleotides 15
- 2.2 DNA Structure 18
 - Experimental Background 19
 - The Double Helix 19
- 2.3 Genes Made of RNA 23
- 2.4 Physical Chemistry of Nucleic Acids 23
 - A Variety of DNA Structures 23
 - DNAs of Various Sizes and Shapes 27

CHAPTER 3

An Introduction to Gene Function 31

- 3.1 Storing Information 32
 - Overview of Gene Expression 32

- Protein Structure 32
- Protein Function 36
- Discovery of Messenger RNA 38
- Transcription 40
- Translation 42
- 3.2 Replication 46
- 3.3 Mutations 47
 - Sickle Cell Disease 47

PART II

Methods of Molecular Biology

CHAPTER 4

Molecular Cloning Methods 51

- 4.1 Gene Cloning 52
 - The Role of Restriction Endonucleases 52
 - Vectors 55
 - Identifying a Specific Clone with a Specific Probe 63
 - cDNA Cloning 64
 - Rapid Amplification of cDNA Ends 66
- 4.2 The Polymerase Chain Reaction 67
 - Standard PCR 67
 - Using Reverse Transcriptase PCR(RT-PCR)
in cDNA Cloning 69
 - Box 4.1** Jurassic Park: More than a Fantasy? 70
 - Real-Time PCR 71
- 4.3 Methods of Expressing Cloned Genes 71
 - Expression Vectors 72
 - Other Eukaryotic Vectors 78
 - Using the Ti Plasmid to Transfer Genes to Plants 78

CHAPTER 5

Molecular Tools for Studying Genes and Gene Activity 83

- 5.1 Molecular Separations 84
 - Gel Electrophoresis 84
 - Two-Dimensional Gel Electrophoresis 87
 - Ion-Exchange Chromatography 88
 - Gel Filtration Chromatography 88
 - Affinity Chromatography 89

- 5.2 **Labeled Tracers** 90
 - Autoradiography 90
 - Phosphorimaging 91
 - Liquid Scintillation Counting 91
 - Nonradioactive Tracers 92
- 5.3 **Using Nucleic Acid Hybridization** 93
 - Southern Blots: Identifying Specific DNA Fragments 93
 - DNA Fingerprinting and DNA Typing 94
 - Forensic Uses of DNA Fingerprinting and DNA Typing 95
 - Immunoblots (Western Blots) 97
 - DNA Sequencing 97
 - Restriction Mapping 101
 - Protein Engineering with Cloned Genes: Site-Directed Mutagenesis 104
- 5.4 **Mapping and Quantifying Transcripts** 106
 - Northern Blots 106
 - S1 Mapping 107
 - Primer Extension 109
 - Run-off Transcription and G-Less Cassette Transcription 110
- 5.5 **Measuring Transcription Rates in Vivo** 112
 - Nuclear Run-On Transcription 112
 - Reporter Gene Transcription 113
 - Measuring Protein Accumulation in Vivo 115
- 5.6 **Assaying DNA-Protein Interactions** 115
 - Filter Binding 115
 - Gel Mobility Shift 115
 - DNase Footprinting 116
 - DMS Footprinting and Other Footprinting Methods 118
- 5.7 **Finding RNA Sequences That Interact with Other Molecules** 119
 - SELEX 119
 - Functional SELEX 120
- 5.8 **Knockouts** 120

PART III

Transcription in Bacteria

CHAPTER 6

The Mechanism of Transcription in Bacteria 126

- 6.1 **RNA Polymerase Structure** 127
 - Sigma (σ) as a Specificity Factor 127
- 6.2 **Promoters** 128
 - Binding of RNA Polymerase to Promoters 128
 - Promoter Structure 130

- 6.3 **Transcription Initiation** 132
 - The Functions of σ 132
 - Structure and Function of σ 139
 - The Role of the α -Subunit in UP Element Recognition 144
- 6.4 **Elongation** 146
 - Core Polymerase Functions in Elongation 146
 - Structure of the Elongation Complex 151
- 6.5 **Termination of Transcription** 162
 - Rho-Independent Termination 162
 - Rho-Dependent Termination 165

CHAPTER 7

Operons: Fine Control of Bacterial Transcription 172

- 7.1 **The *lac* Operon** 173
 - Negative Control of the *lac* Operon 174
 - Discovery of the Operon 174
 - Repressor-Operator Interactions 178
 - The Mechanism of Repression 179
 - Positive Control of the *lac* Operon 182
 - The Mechanism of CAP Action 183
- 7.2 **The *ara* Operon** 188
 - The *ara* Operon Repression Loop 188
 - Evidence for the *ara* Operon Repression Loop 190
 - Autoregulation of *araC* 192
- 7.3 **The *trp* Operon** 192
 - Tryptophan's Role in Negative Control of the *trp* Operon 192
 - Control of the *trp* Operon by Attenuation 193
 - Defeating Attenuation 194
- 7.4 **Riboswitches** 195

CHAPTER 8

Major Shifts in Bacterial Transcription 202

- 8.1 **Sigma Factor Switching** 203
 - Phage Infection 203
 - Sporulation 205
 - Genes with Multiple Promoters 207
 - Other σ Switches 207
- 8.2 **The RNA Polymerase Encoded in Phage T7** 208
- 8.3 **Infection of *E. coli* by Phage λ** 209
 - Lytic Reproduction of Phage λ 210
 - Establishing Lysogeny 217

- Autoregulation of the *cI* Gene During Lysogeny 218
- Determining the Fate of a λ Infection:
Lysis or Lysogeny 222
- Lysogen Induction 224

CHAPTER 9

DNA-Protein Interactions in Bacteria 228

- 9.1 The λ Family of Repressors 229
 - Probing Binding Specificity by
Site-Directed Mutagenesis 229
 - Box 9.1** X-Ray Crystallography 230
 - High-Resolution Analysis of λ Repressor-Operator
Interactions 235
 - High-Resolution Analysis of Phage λ Repressor-Operator
Interactions 238
- 9.2 The *trp* Repressor 240
 - The Role of Tryptophan 240
- 9.3 General Considerations on
Protein-DNA Interactions 241
 - Hydrogen Bonding Capabilities of the Four Different
Base Pairs 241
 - The Importance of Multimeric DNA-Binding
Proteins 242
- 9.4 DNA-Binding Proteins: Action at a Distance 243
 - The *gal* Operon 243
 - Duplicated λ Operators 243
 - Enhancers 244

PART IV

Transcription in Eukaryotes

CHAPTER 10

Eukaryotic RNA Polymerases and Their Promoters 250

- 10.1 Multiple Forms of Eukaryotic
RNA Polymerase 251
 - Separation of the Three Nuclear Polymerases 251
 - The Roles of the Three RNA Polymerases 252
 - RNA Polymerase Subunit Structures 254
- 10.2 Promoters 266
 - Class II Promoters 266
 - Class I Promoters 271
 - Class III Promoters 271
- 10.3 Enhancers and Silencers 274
 - Enhancers 274
 - Silencers 276

CHAPTER 11

General Transcription Factors in Eukaryotes 280

- 11.1 Class II Factors 281
 - The Class II Preinitiation Complex 281
 - Structure and Function of TFIID 283
 - Structure and Function of TFIIB 294
 - Structure and Function of TFIIF 297
 - The Mediator Complex and the
RNA Polymerase II Holoenzyme 303
 - The Elongation Factor TFIIS 303
- 11.2 Class I Factors 306
 - The Core-Binding Factor 306
 - The UPE-Binding Factor 308
 - Structure and Function of SL1 309
- 11.3 Class III Factors 310
 - TFIIIA 310
 - TFIIIB and C 311
 - The Role of TBP 314

CHAPTER 12

Transcription Activators in Eukaryotes 321

- 12.1 Categories of Activators 322
 - DNA-Binding Domains 322
 - Transcription-Activating Domains 322
- 12.2 Structures of the DNA-Binding Motifs
of Activators 323
 - Zinc Fingers 323
 - The GAL4 Protein 325
 - The Nuclear Receptors 326
 - Homeodomains 328
 - The bZIP and bHLH Domains 329
- 12.3 Independence of the Domains of Activators 330
- 12.4 Functions of Activators 332
 - Recruitment of TFIID 332
 - Recruitment of the Holoenzyme 333
- 12.5 Interaction Among Activators 336
 - Dimerization 336
 - Action at a Distance 337
 - Complex Enhancers 340
 - Architectural Transcription Factors 341
 - Insulators 343
- 12.6 Regulation of Transcription Factors 347
 - Coactivators 347
 - Activator Ubiquitylation 350

- Activator Sumoylation 351
- Activator Acetylation 352
- Signal Transduction Pathways 352

CHAPTER 13

Chromatin Structure and Its Effects on Transcription 359

- 13.1 Histones 360
- 13.2 Nucleosomes 361
 - The 30-nm Fiber 364
 - Higher Order Chromatin Folding 366
- 13.3 Chromatin Structure and Gene Activity 368
 - The Effects of Histones on 5S rRNA Gene Transcription 369
 - The Effects of Histones on Transcription of Class II Genes 370
 - Nucleosome Positioning 373
 - Histone Acetylation 377
 - Histone Deacetylation 379
 - Chromatin Remodeling 382
 - Heterochromatin and Silencing 388
 - Nucleosomes and Transcription Elongation 393

PART V

Posttranscriptional Events

CHAPTER 14

Messenger RNA Processing I: Splicing 399

- 14.1 Genes in Pieces 400
 - Evidence for Split Genes 400
 - RNA Splicing 401
 - Splicing Signals 402
- 14.2 The Mechanism of Splicing of Nuclear mRNA Precursors 403
 - A Branched Intermediate 403
 - A Signal at the Branch 406
 - Spliceosomes 406
 - Spliceosome Assembly and Function 418
 - Commitment, Splice Site Selection, and Alternative Splicing 422
 - Control of Splicing 432
- 14.3 Self-Splicing RNAs 434
 - Group I Introns 435
 - Group II Introns 438

CHAPTER 15

Messenger RNA Processing II: Capping and Polyadenylation 444

- 15.1 Capping 445
 - Cap Structure 445
 - Cap Synthesis 446
 - Functions of Caps 448
- 15.2 Polyadenylation 450
 - Poly(A) 450
 - Functions of Poly(A) 451
 - Basic Mechanism of Polyadenylation 453
 - Polyadenylation Signals 454
 - Cleavage and Polyadenylation of a Pre-mRNA 456
 - Poly(A) Polymerase 462
 - Turnover of Poly(A) 463
- 15.3 Coordination of mRNA Processing Events 465
 - Effect of Cap on Splicing 465
 - Effect of Poly(A) on Splicing 466
 - Binding of the CTD of Rpb1 to mRNA-Processing Proteins 467
 - Changes in Association of RNA-Processing Proteins with the CTD Correlate with Changes in CTD Phosphorylation 468
 - Coupling Transcription Termination with mRNA 3'-end Processing 471
 - Mechanism of Termination 473
 - Role of Polyadenylation in mRNA Transport 476

CHAPTER 16

Other RNA Processing Events 481

- 16.1 Ribosomal RNA Processing 482
 - Eukaryotic rRNA Processing 482
 - Bacterial rRNA Processing 484
- 16.2 Transfer RNA Processing 485
 - Cutting Apart Polycistronic Precursors 485
 - Forming Mature 5'-Ends 485
 - Forming Mature 3'-Ends 486
- 16.3 Trans-Splicing 487
 - The Mechanism of Trans-Splicing 487
- 16.4 RNA Editing 490
 - Mechanism of Editing 490
 - Editing by Nucleotide Deamination 493
- 16.5 Posttranscriptional Control of Gene Expression 494
 - Casein mRNA Stability 494
 - Transferrin Receptor mRNA Stability 495
 - RNA Interference 501
 - MicroRNAs and Gene Silencing 513

PART VI**Translation****CHAPTER 17****The Mechanism of Translation I: Initiation 521**

- 17.1 Initiation of Translation in Bacteria 522
 - tRNA Charging 522
 - Dissociation of Ribosomes 522
 - Formation of the 30S Initiation Complex 525
 - Formation of the 70S Initiation Complex 532
 - Summary of Initiation in Bacteria 534
- 17.2 Initiation in Eukaryotes 535
 - The Scanning Model of Initiation 535
 - Eukaryotic Initiation Factors 539
 - Overview of Translation Initiation in Eukaryotes 539
- 17.3 Control of Initiation 547
 - Bacterial Translational Control 547
 - Eukaryotic Translational Control 551

CHAPTER 18**The Mechanism of Translation II: Elongation and Termination 564**

- 18.1 The Direction of Polypeptide Synthesis and of mRNA Translation 565
- 18.2 The Genetic Code 566
 - Nonoverlapping Codons 567
 - No Gaps in the Code 567
 - The Triplet Code 567
 - Breaking the Code 569
 - Unusual Base Pairs Between Codon and Anticodon 570
 - The (Almost) Universal Code 571
- 18.3 The Elongation Mechanism 573
 - Overview of Elongation 573
 - A Three-Site Model of the Ribosome 575
 - Elongation Step 1: Binding an Aminoacyl-tRNA to the A Site of the Ribosome 577
 - Elongation Step 2: Peptide Bond Formation 583
 - Elongation Step 3: Translocation 585
 - GTPases and Translation 588
 - The Structures of EF-Tu and EF-G 589
- 18.4 Termination 589
 - Termination Codons 589
 - Stop Codon Suppression 591
 - Release Factors 592
 - Dealing with Aberrant Termination 595
 - Use of Stop Codons to Insert Unusual Amino Acids 599

- 18.5 Posttranslation 600
 - Folding Nascent Proteins 600
 - Release of Ribosomes from mRNA 601

CHAPTER 19**Ribosomes and Transfer RNA 607**

- 19.1 Ribosomes 608
 - Fine Structure of the 70S Ribosome 608
 - Ribosome Composition 611
 - Ribosome Assembly 612
 - Fine Structure of the 30S Subunit 613
 - Fine Structure of the 50S Subunit 621
 - Polysomes 624
- 19.2 Transfer RNA 625
 - The Discovery of tRNA 625
 - tRNA Structure 626
 - Recognition of tRNAs by Aminoacyl-tRNA Synthetase: The Second Genetic Code 629
 - Proofreading and Editing by Aminoacyl-tRNA Synthetases 633

PART VII**DNA Replication, Recombination, and Transposition****CHAPTER 20****DNA Replication I: Basic Mechanism and Enzymology 639**

- 20.1 General Features of DNA Replication 640
 - Semiconservative Replication 640
 - Semidiscontinuous Replication 642
 - Priming of DNA Synthesis 644
 - Bidirectional Replication 645
 - Unidirectional Replication 647
 - Rolling Circle Replication 649
- 20.2 Enzymology of DNA Replication 650
 - Three DNA Polymerases in *E. coli* 650
 - Fidelity of Replication 654
 - Multiple Eukaryotic DNA Polymerases 654
 - Strand Separation 655
 - Single-Strand DNA-Binding Proteins 657
 - Topoisomerases 658
- 20.3 DNA Damage and Repair 660
 - Damage Caused by Alkylation of Bases 661
 - Damage Caused by Ultraviolet Radiation 662
 - Damage Caused by Gamma and X-Rays 663

- Directly Undoing DNA Damage 663
- Excision Repair 664
- Double-Strand Break Repair in Eukaryotes 670
- Mismatch Repair 672
- Failure of Mismatch Repair in Humans 673
- Coping with DNA Damage Without Repairing It 673

CHAPTER 21

DNA Replication II: Detailed Mechanism 683

- 21.1 Initiation 684
 - Priming in *E. coli* 684
 - Priming in Eukaryotes 685
- 21.2 Elongation 690
 - Speed of Replication 690
 - The Pol III Holoenzyme and Processivity of Replication 690
- 21.3 Termination 702
 - Decatenation: Disentangling Daughter DNAs 702
 - Termination in Eukaryotes 704
 - Box 21.1** Telomeres, the Hayflick Limit, and Cancer 709

CHAPTER 22

Homologous Recombination 718

- 22.1 The RecBCD Pathway for Homologous Recombination 719
- 22.2 Experimental Support for the RecBCD Pathway 722
 - RecA 722
 - RecBCD 725
 - RuvA and RuvB 727
 - RuvC 729
- 22.3 Meiotic Recombination 732
 - The Mechanism of Meiotic Recombination: Overview 732
 - The Double-Stranded DNA Break 733
 - Creation of Single-Stranded Ends at DSBs 738
- 22.4 Gene Conversion 738

CHAPTER 23

Transposition 743

- 23.1 Bacterial Transposons 744
 - Discovery of Bacterial Transposons 744
 - Insertion Sequences: The Simplest Bacterial Transposons 744
 - More Complex Transposons 745
 - Mechanisms of Transposition 745

- 23.2 Eukaryotic Transposons 748
 - The First Examples of Transposable Elements: *Ds* and *Ac* of Maize 748
 - P Elements 750
- 23.3 Rearrangement of Immunoglobulin Genes 751
 - Recombination Signals 753
 - The Recombinase 754
 - Mechanism of V(D)J Recombination 754
- 23.4 Retrotransposons 756
 - Retroviruses 756
 - Retrotransposons 760

PART VIII

Genomes

CHAPTER 24

Genomics, Proteomics, and Bioinformatics 770

- 24.1 Positional Cloning: An Introduction to Genomics 771
 - Classical Tools of Positional Cloning 771
 - Identifying the Gene Mutated in a Human Disease 773
 - Box 24.1** Problems in Genetic Screening 777
- 24.2 Sequencing Genomes 778
 - The Human Genome Project 780
 - Vectors for Large-Scale Genome Projects 781
 - The Clone-by-Clone Strategy 783
 - Shotgun Sequencing 786
 - Sequencing Standards 787
 - Sequencing the Human Genome 787
 - Other Vertebrate Genomes 794
 - The Minimal Genome 795
 - The Barcode of Life 796
- 24.3 Applications of Genomics: Functional Genomics 797
 - Transcriptomics 798
 - Genomic Functional Profiling 805
 - Single-Nucleotide Polymorphisms: Pharmacogenomics 811
- 24.4 Proteomics 813
 - Protein Separations 813
 - Protein Analysis 813
 - Protein Interactions 814
- 24.5 Bioinformatics 817
 - Finding Regulatory Motifs in Mammalian Genomes 818
 - Using the Databases Yourself 819

Glossary 829

Index 857
