Preface xiii

1 **Chromatin Structure and the Regulation of Gene Expression: The Lessons of PEV in *Drosophila*** 1

Jack R. Girtton and Kristen M. Johansen

I. Introduction: Position Effect in *Drosophila* 2

II. Historical Background of the PEV Phenotype 5

III. Types of PEV 8

IV. Genome Organization and PEV 19

V. Concluding Remarks 29

References 31

2 **Polycomb Group Proteins and Long-Range Gene Regulation** 45

Julio Mateos-Langerak and Giacomo Cavalli

I. Introduction 46

II. Genetic and Biochemical Characterization of PcG Proteins 48

III. PcG Mechanisms of Action 49

IV. PcG Proteins and Long-Range Gene Silencing 53

V. PcG and Very Long-Range Gene Silencing: "Teleregulation" of Gene Expression 57

VI. Conclusions and Prospects 61

References 62

3 **Evolution of *Cis*-Regulatory Sequences in *Drosophila*** 67

Pat Simpson and Savita Ayyar

I. Introduction 68

II. Developmental Homeostasis, Sequence Turnover, and Stabilizing Selection 72

III. Enhancer Evolution and Loss or Gain of Traits 84

IV. <i>Cis-Trans</i> Coevolution	91
V. Evolution of New Regulatory Modules	95
VI. Conclusions	98
References	99

4 β -Globin Regulation and Long-Range Interactions 107

Robert-Jan Palstra, Wouter de Laat, and Frank Grosveld

I. Introduction	108
II. The β -Globin Locus	109
III. Models of Long-Range Control of Gene Expression by Enhancers	115
IV. Long-Range Activation by the β -Globin LCR	117
V. Enhancement of Transcription by the β -Globin LCR: Rate-Limiting Steps	127
VI. The Concept of an Active Chromatin Hub	131
VII. Future Directions	132
References	133

5 Long-Range Regulation of α -Globin Gene Expression 143

Douglas R. Higgs, Douglas Vernimmen, and Bill Wood

I. Introduction	144
II. The Normal Structure and Evolution of the α -Globin Cluster	146
III. Functional Analysis of the α -Globin Regulatory Domain	147
IV. Structure of the Upstream Regulatory Elements and the Promoters	152
V. Transcription Factors Involved in Erythropoiesis	153
VI. Cellular Resources for Studying the Key Stages of Hematopoiesis	157
VII. Transcription Factor Binding to the Upstream Regulatory Elements	158
VIII. Transcription Factor Binding to the Promoter	159
IX. The Recruitment of RNA Polymerase and GTFs to the α -Globin Cluster	160
X. What Role Do the Remote Regulatory Elements Play?	161
XI. How Do the Upstream Elements Interact with the Promoter?	162

XII. Sequential Activation of the α -Globin Gene Cluster During Differentiation	165
XIII. Conclusions, Speculation, and Future Directions	166
References	169
6 Global Control Regions and Regulatory Landscapes in Vertebrate Development and Evolution	175
Francois Spitz and Denis Duboule	
I. Introduction	176
II. Global Controls	178
III. Co-Expression Chromosomal Territories, Regulatory Landscapes, and Global Control Regions	185
IV. Mechanisms of Underlying Global Regulation	188
V. Co-Expression Chromosomal Territories, Regulatory Landscapes: Bystander Effects or Functional Operons?	192
VI. Evolutionary Implications of Global Gene Control	195
VII. Global Regulation, Chromosomal Architecture, and Genetic Disorders	197
VIII. Concluding Remarks	197
References	198
7 Regulation of Imprinting in Clusters: Noncoding RNAs Versus Insulators	207
Le-Ben Wan and Marisa S. Bartolomei	
I. Introduction	208
II. Insulator Model of Regulation	209
III. The ncRNA Model of Regulation	212
IV. <i>Dlk1/Gtl2</i> Imprinted Cluster: A Bit of Everything	215
V. Conclusions	218
References	219
8 Genomic Imprinting and Imprinting Defects in Humans	225
Bernhard Horsthemke and Karin Buiting	
I. Introduction	226
II. The Mechanisms of Genomic Imprinting	226
III. Imprinting Defects	230
IV. Conclusions	242
References	243

9	Epigenetic Gene Regulation in Cancer	247
	Esteban Ballestar and Manel Esteller	
	I. Introduction	248
	II. Cancer Cells Show A Disruption of DNA Methylation Patterns	250
	III. Disruption of the Histone Modification Profile in Cancer	253
	IV. Cascades of Epigenetic Deregulation in Cancer	256-
	V. What Are the Mechanisms That Lead to Aberrant Methylation Patterns in Cancer?	258
	VI. Epigenetic Therapy for Cancer Treatment	261
	References	262
10	Genomic Identification of Regulatory Elements by Evolutionary Sequence Comparison and Functional Analysis	269
	Gabriela G. Loots	
	I. Introduction	270
	II. Genomic Architecture of the Human Genome	271
	III. Computational Methods of Predicting Regulatory Elements	276
	IV. <i>In Vivo</i> Validation and Characterization of Transcriptional Regulatory Elements	282
	V. Conclusions	286
	References	287
11	Regulatory Variation and Evolution: Implications for Disease	295
	Emmanouil T. Dermitzakis	
	I. Introduction	296
	II. Evolution and Variation of Noncoding DNA	297
	III. Natural Selection in Noncoding DNA	300
	IV. Gene Expression Studies	301
	V. Disease Implications	302
	VI. Conclusions	303
	References	304

12 Organization of Conserved Elements Near Key Developmental Regulators in Vertebrate Genomes 307

Adam Woolfe and Greg Elgar

- I. Introduction 308
- II. Gene-Regulatory Networks in Development 309
- III. Identification of Evolutionarily Constrained Sequences Using Phylogenetic Footprinting 310
- IV. Searches for Regulatory Elements Using Evolutionary Conservation 310
- V. *Takifugu Rubripes*: A Compact Model Genome 312
- VI. Identification of Enhancer Elements Through Fish-Mammal Comparisons 313
- VII. Fish-Mammal Conserved Noncoding Elements Are Associated with Vertebrate Development 315
- VIII. High-Resolution Analysis of the Organization of CNEs Around Key Developmental Regulators 317
- IX. General Genomic Environment Around CNEs 317
- X. CNEs Present in Transcripts 319
- XI. CNEs Located Within UTRs 321
- XII. CNEs Are Located Large Distances Away from Their Putative Target Gene 323
- XIII. Discussion 328
- References 333

13 Long-Range Gene Control and Genetic Disease 339

Dirk A. Kleinjan and Laura A. Lettice

- I. From Genetic Disease to Long-Range Gene Regulation 340
- II. Position Effect Revisited 342
- III. Loss of a Positive Regulator 345
- IV. TWIST, POU3F4, PITX2, SOX3, GLI3, and FOXP2 346
- V. The "Bystander" Effect 353
- VI. MAF, SDC2, TGFB2, REEP3, and PLP1 355
- VII. Two Position Effects—Different Outcomes 357
- VIII. Phenotypes Resulting from Position Effects on More than One Gene 362
- IX. Global Control Regions; HOXD, Gremlin, and Limb Malformations 363
- X. FOX Genes and Position Effects 365

XI. SOX9 and Campomelic Displasia	366
XII. Facioscapulohumeral Dystrophy	368
XIII. Aberrant Creation of an Illegitimate siRNA Target Site	370
XIV. Genetic Disease Due to Aberrant Gene Transcription Can Be Caused by Many Different Mechanisms	371
XV. Concluding Remarks	378
References	379

Index	389
