- 1 **Rapidly Evolving *Rab* GTPase Paralogs and Reproductive Isolation in *Drosophila***      1  
Pierre Hutter
  - I. Introduction      2
  - II. Experimental Approaches      5
  - III. Influences of *Rab9D* on Viability of Hybrids Between *D. melanogaster* and Its Sibling Species      5
  - IV. Predictions of Functions for 6paRAB9 Proteins      14
  - V. General Considerations      16
  - References      20
  
- 2 **The *Neurospora crassa* Circadian Clock**      25  
Christian Heintzen and Yi Liu
  - I. Introduction      26
  - II. *Neurospora* as a Circadian Model System      27
  - III. The Molecular Machinery of the *Neurospora* Circadian Oscillator      28
  - IV. Temporal Input from the Environment      42
  - V. Temporal Output from the Oscillator      54
  - VI. FRQ-Less Oscillators      56
  - VII. Conclusions      58
  - References      59
  
- 3 **Involvement of Homologous Recombination in Carcinogenesis**      67  
Ramune Reliene, Alexander J. R. Bishop, and Robert H. Schiestl
  - I. Introduction      68
  - II. HR Involvement in DNA Repair      69
  - III. HR and Carcinogenesis      71

| IV. Other Diseases Attributable to HR            | 75 |
| V. Carcinogen-Induced HR in Experimental Systems | 76 |
| VI. Summary                                      | 79 |
| References                                       | 80 |

#### **4 Mutational Analysis of the Ribosome 89**

Kathleen L. Triman

|                                              |     |
|----------------------------------------------|-----|
| I. Introduction                              | 90  |
| II. Mutational Analysis of 16S rRNA          |     |
| Structure and Function                       | 91  |
| III. Mutational Analysis of 23S rRNA         |     |
| Structure and Function                       | 97  |
| IV. Mutational Analysis of Ribosomal Protein |     |
| Structure and Function                       | 103 |
| V. Mutational Analysis of Ribosomal Factor   |     |
| Structure and Function                       | 106 |
| VI. Concluding Remarks                       | 108 |
| References                                   | 109 |

#### **5 Application of Genomics to Molecular Breeding of Wheat and Barley 121**

Rajeev K. Varshney, Peter Langridge,  
and Andreas Graner

|                                                               |     |
|---------------------------------------------------------------|-----|
