

CONTENTS

<i>Contributors</i>	xv
<i>Preface</i>	xxiii
<i>Volumes in Series</i>	xxv
1. Water Compartments in Cells	1
Gary D. Fullerton and Ivan L. Cameron	
1. Introduction	2
2. The Stoichiometric Hydration Model (SHM)	3
3. Predictions Using the SHM	9
4. Biophysical Measurements of Compartmental Hydration Capacities	11
5. Relationship of the Hydration Model to Osmosensing and Osmosignaling	18
6. Relationship of the SH Model to Enzyme Function	19
7. Relationship of the SH Model to Cellular Function	24
8. Summary and Conclusions	25
References	25
2. Yeast Osmoregulation	29
Stefan Hohmann, Marcus Krantz, and Bodil Nordlander	
1. Time Line: Response to Osmotic Shock	30
2. Glycerol Metabolism and the Aquaglyceroporin Fps1	31
3. The HOG Signaling System	33
4. Transcriptional Responses	35
5. Studying the Control of Signaling	37
6. Future Directions	41
Acknowledgments	41
References	42
3. Physiological Analysis of Bacterial Mechanosensitive Channels	47
Ian R. Booth, Michelle D. Edwards, Susan Black, Ulrike Schumann, Wendy Bartlett, Tim Rasmussen, Akiko Rasmussen, and Samantha Miller	
1. Introduction	47
2. Analysis of Native Channel Function	49
3. Protocol	54

4. Variants on the Basic Viability Assay	56
5. Analyzing Mutant Channels	57
References	59
4. Control of Cell Cycle in Response to Osmostress: Lessons from Yeast	63
J. Clotet and F. Posas	
1. Introduction	64
2. Regulation of the Yeast Cell Cycle	64
3. Osmostress Response in Budding and Fission Yeast	66
4. Control of the G ₁ Phase by SAPKs	68
5. Control of the G ₂ Phase by SAPKs	70
6. Control of the Anaphase–Telophase Transition	71
7. Regulation of Exit from Mitosis by SAPKs	72
8. Conclusions and Perspectives	73
References	74
5. Bacterial Osmosensing Transporters	77
Janet M. Wood	
1. Introduction	78
2. Estimation of Key Solution Properties and of Turgor Pressure	85
3. Assessment of Osmotolerance	88
4. Identification of Osmoprotectants, Compatible Solutes, and Organic Osmolytes	89
5. Identification and Distribution of Osmosensory and Osmoregulatory Transporters	90
6. <i>In Vitro</i> Systems	96
7. Measurement of Osmosensory Transporter Activity	98
8. Conclusion	100
References	101
6. Plant Gene Networks in Osmotic Stress Response: From Genes to Regulatory Networks	109
Lam-Son Phan Tran, Kazuo Nakashima, Kazuo Shinozaki, and Kazuko Yamaguchi-Shinozaki	
1. Introduction	110
2. Identification of Stress-Responsive Genes	113
3. Identification of <i>cis</i> -Acting Regulatory Elements: Use of <i>GUS</i> , <i>LUC</i> , and <i>GFP</i> Reporter Genes	115
4. Identification of <i>Trans</i> -Acting Regulatory Elements	118
5. Characterization of TFs	121
6. Functional Analysis of TFs <i>In Planta</i>	122
Acknowledgments	124
References	125

7. Osmosensing by Integrins in Rat Liver	129
Freimut Schliess and Dieter Häussinger	
1. Integrins in Mechanotransduction and Growth Factor Signaling	130
2. Cell Hydration and Cell Function	132
3. The Perfused Rat Liver: An Intact Organ Model of the Liver	133
4. Activation of β_1 Integrin Subunit by Hypoosmolarity and Insulin in Perfused Rat Liver	136
5. Integrins in the Regulation of Autophagic Proteolysis in the Liver	136
6. Integrins in the Regulation of Canalicular Bile Acid Excretion in the Liver	138
7. Integrins in Hepatocyte Volume Regulation	139
8. Conclusion	139
Acknowledgments	156
References	140
8. Hyperosmotic Activation of the CD95 System	145
Roland Reinehr and Dieter Häussinger	
1. Introduction	146
2. Hyperosmotic Activation of the CD95 System in Hepatocytes	148
3. Concluding Remarks	156
Acknowledgments	156
References	156
9. New Approaches for Determining Apoptotic Volume Decrease in Cells	161
Carl D. Bortner, Maria I. Sifre, and John A. Cidlowski	
1. Introduction	162
2. Classical Ways to Study Cell Shrinkage or AVD During Apoptosis	163
3. Instrument Setup and Calibration for the Cell Lab Quanta SC	165
4. General Considerations in Studying AVD and Apoptosis on the Cell Lab Quanta SC	168
5. Preparation of Cells Undergoing Apoptosis	169
6. AVD and Externalization of Phosphatidylserine During Apoptosis	169
7. AVD and Caspase Activity During Apoptosis	170
8. AVD and Plasma Membrane Potential During Apoptosis	171
9. Data Acquisition for the Cell Lab Quanta SC	172
10. Data Analysis for AVD and Apoptotic Characteristics on the Cell Lab Quanta SC	172
11. Conclusion	180
Acknowledgments	180
References	180

10. Transient Receptor Potential Channels in Mechanosensing and Cell Volume Regulation	183
Stine Falsig Pedersen and Bernd Nilius	
1. Introduction	184
2. General Mechanisms of Mechano- or Osmosensing by Membrane Proteins	184
3. TRP Channels in Mechano- and Osmosensing	188
4. TRP Channels in Cell Volume Regulation	192
5. Experimental Procedures	193
Acknowledgments	201
References	201
 11. Cell Volume Regulatory Ion Channels in Cell Proliferation and Cell Death	 209
Florian Lang, Michael Föller, Karl Lang, Philipp Lang, Markus Ritter, Alexey Vereninov, Ildiko Szabo, Stephan M. Huber, and Erich Gulbins	
1. Introduction	210
2. Anion Channels, Osmolyte Transport, and pH Regulation	211
3. Ca^{2+} and Unselective Cation Channels	212
4. K^{+} channels	213
5. Switching from Cell Proliferation to Suicidal Cell Death	215
Acknowledgments	216
References	216
 12. Actin Cytoskeleton Architecture and Signaling in Osmosensing	 227
Evangelia A. Papakonstanti and Christos Stournaras	
1. Introduction	228
2. Morphological Analysis of Actin Cytoskeleton During Cell Volume Changes	229
3. Quantitative Biochemical Analysis of Actin Cytoskeleton Dynamics During Cell Volume Changes	230
4. Signaling Pathways Linking Actin Reorganization and Cell Volume Regulation	231
5. Quantitative Assessment of Cellular Actin Cytoskeleton Dynamics	232
6. Quantification of Cellular Monomeric and Total Actin Using the DNase I Inhibition Assay	233
7. DNase I Inhibition Assay Protocol	234
8. Quantification of Filamentous Actin Using Rhodamine-Phalloidin Fluorescence Measurements of Actin in Detergent Cell Extracts	235
9. Filamentous (F-) Actin Quantification Protocol	235

10. Quantitative Immunoblot Analysis of Triton X-100 Insoluble Cytoskeletal Pellets and Corresponding Supernatants	236
11. Triton Soluble/Insoluble Actin Ratio Determination	236
References	237
13. Osmotic Stress and DNA Damage	241
Natalia I. Dmitrieva and Maurice B. Burg	
1. Introduction	242
2. Detection of DNA Damage by Comet Assay	242
3. Detection of DNA Breaks by <i>In Situ</i> End Labeling	246
References	250
14. Transcriptional Activator TonE-Binding Protein in Cellular Protection and Differentiation	253
Jeong Ah Kim, Un Sil Jeon, Min Seong Kwon, Sun Woo Lim, and H. Moo Kwon	
1. Introduction	254
2. Immunological Detection of TonEBP	255
3. Functional Analyses of TonEBP	258
4. How to Identify TonEBP Target Genes	261
5. Biochemical Analysis of TonEBP	265
Acknowledgments	265
References	266
15. Desiccation Response of Mammalian Cells: Anhydrosignaling	269
Zebo Huang and Alan Tunnacliffe	
1. Introduction	270
2. Cell Cultures	272
3. Desiccation	273
4. Cell Viability Test	273
5. Western Blotting	273
6. Relative Quantification of Gene Expression	275
Acknowledgments	276
References	276
16. Tonicity-Regulated Gene Expression	279
Joan D. Ferraris and Maurice B. Burg	
1. Introduction	280
2. Quantitation of the Nuclear: Cytoplasmic Distribution Ratio of the Transcription Factor TonEBP/OREBP in HEK293 Cells	286

3. Nonradioactive EMSA of Nuclear Extracts of HEK293 Cells for Binding of the Complex of TonEBP/OREBP and Associated Proteins to ORE Elements	288
4. Quantitation of Transcriptional and Transactivational Activities of TonEBP/OREBP Using Transient or Stable Transfection of HEK293 Cells	290
Acknowledgment	293
References	293
17. Hyperosmotic Induction of Mitogen-Activated Protein Kinase Scaffolding	297
Thomas L. Hilder, Michael H. Malone, and Gary L. Johnson	
1. Introduction	298
2. RNA Interference	300
3. <i>In Vitro</i> Kinase Assays	302
4. Measuring Dynamic Interactions Between MAPK Scaffold Members Using FRET	303
References	310
18. Osmoregulation of Bile Formation	313
Ralf Kubitz and Dieter Häussinger	
1. Networks of Transport Systems	314
2. Osmoregulation of Canalicular Secretion	315
3. Osmosensing and Osmosignaling Pathways Toward Canalicular Secretion	317
4. Osmoregulation of Sinusoidal Bile Acid Uptake	318
5. Methods Used to Study Osmoregulated Transporter Insertion/Retrieval	318
6. Concluding Remarks	320
Acknowledgments	321
References	322
19. Osmosignaling and Volume Regulation in Intestinal Epithelial Cells	325
Christina H. Lim, Alice G. M. Bot, Hugo R. de Jonge, and Ben C. Tilly	
1. Introduction	326
2. Properties of Ion Channels and Transporters Activated During RVD in Intestinal Epithelial Cells	326
3. Osmosensing and Signaling	328
4. Model Systems	330
5. Measuring Ionic Responses	331
6. Concluding Remarks	338
References	338

20. Osmotic Regulation of Cellular Glucose Uptake	343
Philippe Gual, Teresa Gonzalez, Thierry Gremeaux, Yannick Le Marchand-Brustel, and Jean-François Tanti	
1. Introduction	344
2. Hyperosmolarity and Glucose Transport	347
3. Hyperosmolarity and Membrane Ruffling	349
4. Hyperosmolarity and Signaling Pathways	350
5. Hyperosmolarity and Phosphatidylinositol 3-Kinase Activity	351
6. Conclusion	353
Acknowledgments	353
References	354
21. Effects of Osmolytes on Protein Folding and Aggregation in Cells	355
Zoya Ignatova and Lila M. Gierasch	
1. Introduction	356
2. Analysis of Effects of Osmolytes <i>In Vivo</i>	358
3. Comparison of the Influence of Osmolytes <i>In Vivo</i> with That <i>In Vitro</i>	367
4. Conclusions	370
Acknowledgments	370
References	370
22. Simulations of Macromolecules in Protective and Denaturing Osmolytes: Properties of Mixed Solvent Systems and Their Effects on Water and Protein Structure and Dynamics	373
David A. C. Beck, Brian J. Bennion, Darwin O. V. Alonso, and Valerie Daggett	
1. Introduction	374
2. Methods	375
3. Results	379
4. Discussion	389
5. Conclusions	392
Acknowledgments	393
References	393
23. Application of the Transfer Model to Understand How Naturally Occurring Osmolytes Affect Protein Stability	397
Matthew Auton and D. Wayne Bolen	
1. Introduction	398
2. Initial Observations of Osmolyte Effects on Proteins	398
3. The Transfer-Free Energy Model	401
4. How Transfer-Free Energies Are Measured	403

5. The Issue of Activity Coefficients: Solution Nonideality at the Solubility Limit	406
6. Additive, Concentration Scale-Independent and Model Compound-Independent Transfer-Free Energies of the Peptide Backbone Unit	408
7. The Transfer-Free Energy of Amino Acid Side Chains	412
8. Solvent-Accessible Surface Areas of Native and Denatured States: Calculating Δz_i	413
9. Putting It All Together: Predicting m Values for the Energetics of Osmolyte-Induced Protein Folding/Unfolding	414
10. Summary	415
Acknowledgments	416
References	416
24. Mechanisms of High Salinity Tolerance in Plants	419
Narendra Tuteja	
1. Introduction	420
2. Adverse Effect of Salinity Stress	421
3. Generic Pathway for Plant Response to Stress	422
4. Ion Pumps, Calcium, and SOS Pathways in Relation to Salinity Stress	424
5. Absciscic Acid and Transcription Factors in Salinity Stress Tolerance	427
6. Mitogen-Activated Protein Kinases and Salinity Stress	430
7. Glycine Betaine and Proline in Salinity Stress	430
8. Reactive Oxygen Species in Salinity Stress	431
9. DEAD-Box Helicases in Salinity Stress Tolerance	432
10. Cross-Tolerances Between Stresses	434
11. Future Prospective	435
Acknowledgments	436
References	436
25. Phenotype of the Taurine Transporter Knockout Mouse	439
Ulrich Warskulat, Birgit Heller-Stilb, Evelyn Oermann, Karl Zilles, Helmut Haas, Florian Lang, and Dieter Häussinger	
1. Targeted Disruption of the <i>taut</i> Gene	440
2. Reduced Taurine Levels Lead to Various Diseases in <i>taut</i> ^{-/-} Mice	441
3. Reduced Exercise Capacity in <i>taut</i> ^{-/-} Mice	442
4. Pathophysiological Changes in Brain, Retina, Olfactory Bulb, and Inner Ear of <i>taut</i> ^{-/-} Mice	444
5. Renal Function in <i>taut</i> ^{-/-} Mice	448
6. Chronic Liver Disease in <i>taut</i> ^{-/-} Mice	449
7. Available Organic Osmolyte Transporter Transgene and Knockout Mice	452
References	452

26. Molecular Basis of Osmolyte Effects on Protein and Metabolites 459

Jörg Rösgen

- | | |
|--|-----|
| 1. Introduction | 460 |
| 2. General Kirkwood–Buff Equations | 467 |
| 3. Case 1: Osmolyte Solvation | 470 |
| 4. Case 2: m Values | 474 |
| 5. Case 3: Specific Binding of an Osmolyte | 479 |
| 6. Case 4: Specific Binding of a Dilute Ligand | 482 |
| Acknowledgments | 483 |
| References | 484 |

27. Methods of Changing Biopolymer Volume Fraction and Cytoplasmic Solute Concentrations for *In Vivo* Biophysical Studies 487

Michael C. Konopka, James C. Weisshaar, and M. Thomas Record, Jr.

- | | |
|---|-----|
| 1. Introduction | 488 |
| 2. Varying Biopolymer Volume Fraction and Cytoplasmic Solute Concentrations Osmotically | 488 |
| 3. Biophysical Studies <i>In Vivo</i> Using Permeable Solutes: Protein Unfolding by Urea Titration | 495 |
| 4. Effects of Biopolymer Volume Fraction and/or Other <i>In Vivo</i> Factors on Protein Diffusion in the <i>E. coli</i> Cytoplasm | 498 |
| 5. Summary | 501 |
| Acknowledgments | 501 |
| References | 501 |

28. Characterization of Plant Aquaporins 505

Ralf Kaldenhoff, Adam Bertl, Beate Otto, Menachem Moshelion, and Norbert Uehlein

- | | |
|---|-----|
| 1. Molecular Function of Plant Aquaporins | 506 |
| 2. Aquaporin Function in Plants | 517 |
| Acknowledgments | 526 |
| References | 526 |
