

CONTENTS

<i>Contributors</i>	<i>xi</i>
<i>Preface</i>	<i>xv</i>
<i>Volumes in Series</i>	<i>xvii</i>

1. Use of Reticulocyte Lysates for Mechanistic Studies of Eukaryotic Translation Initiation	1
William C. Merrick and Diane Barth-Baus	
1. Introduction	2
2. Materials	3
3. Methods	4
4. Translation of an mRNA to Yield a Radioactive Product	5
5. Quantitation of Reaction Products	6
6. Optimization of Translations	8
7. Reporter Proteins for Translation	10
8. Experimental Use of Nuclease-Treated Lysates	11
References	19
2. Studying Translational Control in <i>Drosophila</i> Cell-Free Systems	23
Fátima Gebauer and Matthias W. Hentze	
1. Introduction	23
2. Preparation of Ovary Extracts	25
3. Preparation of Embryo Extracts	27
4. The Translation Assay	28
Acknowledgments	32
References	32
3. Use of <i>In Vitro</i> Translation Extract Depleted in Specific Initiation Factors for the Investigation of Translational Regulation	35
Daniel R. Gallie	
1. Introduction	36
2. Factors Involved in Translation Initiation	36
3. Experimental Methods to Generate and Use Fractionated Translation Extracts	37
References	50

4. A Highly Efficient and Robust *In Vitro* Translation System for Expression of Picornavirus and Hepatitis C Virus RNA Genomes **53**

Yuri V. Svitkin and Nahum Sonenberg

1. Introduction	54
2. Cell-Free Model for EMCV Replication	55
3. Materials for Cell-Free Synthesis of EMCV	58
4. Methods for Cell-Free Synthesis of EMCV	61
5. <i>In Vitro</i> Translation of HCV RNA	66
6. Materials for <i>In Vitro</i> Translation of HCV RNA	68
7. Methods and Applications of <i>In Vitro</i> Translation of HCV RNA	70
8. Perspectives and Future Applications	76
Acknowledgments	79
References	79

5. A Practical Approach to Isolate 48S Complexes: Affinity Purification and Analyses **83**

Nicolas Locker and Peter J. Lukavsky

1. Introduction	84
2. Design of Strepto-Tagged mRNAs for Affinity Purification of 48S Complexes	86
3. Affinity Purification of 48S Complexes	88
4. Analysis of the Purified 48S Complexes	94
5. Functional Analysis of the Purified 48S Complexes	99
6. Conclusion	102
Acknowledgments	102
References	103

6. Yeast Phenotypic Assays on Translational Control **105**

Bumjun Lee, Tsuyoshi Udagawa, Chingakham Ranjit Singh, and Katsura Asano

1. Introduction	106
2. Quantitative Yeast Growth Assay	109
3. Use of FOA to Assay Lethal Mutations and Perform Plasmid Shuffling	114
4. Assay of Dominant Negative Mutants, Foreign Proteins, or Phenotypic Suppression by Overexpression	116
5. Assay of Stringency in Start Codon Selection	120
6. Assay of Translation Initiation Activities with <i>GCN4</i> as Reporter	123
7. Polysome Profiling	129
Acknowledgments	133
References	133

7. Localization and Characterization of Protein-Protein Interaction Sites	139
Chingakham Ranjit Singh and Katsura Asano	
1. Introduction	140
2. The Use of Two-Hybrid Assay to Identify Protein-Protein Interaction Sites	141
3. GST Pull-Down Assay	146
4. Site-Directed Mutagenesis to Study Protein-Protein Interactions	154
5. Co-IP Assay	156
Acknowledgments	159
References	160
8. <i>In Vivo</i> Stabilization of Preinitiation Complexes by Formaldehyde Cross-Linking	163
Leos Valášek, Bela Szamecz, Alan G. Hinnebusch, and Klaus H. Nielsen	
1. Introduction	164
2. Rationale Behind the Choice of HCHO as a Stabilization Agent	166
3. Whole Cell Extract Preparation and WCE Fractionation	168
4. Analysis of Fractionated Preinitiation Complexes	169
5. Special Considerations and the Resedimentation Protocol	171
6. Final Remarks	179
Acknowledgments	181
References	181
9. Molecular Genetic Structure-Function Analysis of Translation Initiation Factor eIF5B	185
Byung-Sik Shin and Thomas E. Dever	
1. Introduction	186
2. Methods	188
3. Future Directions	200
References	200
10. The Use of Fungal <i>In Vitro</i> Systems for Studying Translational Regulation	203
Cheng Wu, Nadia Amrani, Allan Jacobson, and Matthew S. Sachs	
1. Introduction	204
2. Methods and Discussion	204
3. Summary	222
Acknowledgments	223
References	223

11. Investigating Translation Initiation Using <i>Drosophila</i> Molecular Genetics	227
Gritta Tettweiler and Paul Lasko	
1. Introduction	227
2. <i>P-Elements</i>	228
3. Perspectives and Conclusions	238
4. Important Sources for <i>Drosophila</i> Protocols	238
5. <i>Drosophila</i> Stock Centers	239
References	239
12. Analysis of RNA:Protein Interactions <i>In Vivo</i>: Identification of RNA-Binding Partners of Nuclear Factor 90	243
Andrew M. Parrott, Melissa R. Walsh, and Michael B. Mathews	
1. Introduction	244
2. Expression of Epitope-Tagged Proteins	245
3. RNP Immunoprecipitation (RIP) Assay	246
4. Identification of Unknown RNAs by PCR Amplification and Sequencing	252
5. Summary	256
Acknowledgment	258
References	258
13. Approaches for Analyzing the Differential Activities and Functions of eIF4E Family Members	261
Robert E. Rhoads, Tzvetanka D. Dinkova, and Rosemary Jagus	
1. Introduction	262
2. <i>In Silico</i> Detection and Analysis of eIF4E Family Members	267
3. Assessing Differential Cap-Binding Properties of eIF4E Family Members	271
4. Expression of eIF4E Family Members	273
5. Assessing eIF4E Family Members in Translation Systems	279
6. Protein-Protein Interaction Assays as a Means to Differentiate Functions of eIF4E Family Members	283
7. Global Microarray Studies of Polysomal mRNA Distribution	290
Acknowledgments	292
References	292
14. Tethered Function Assays: An Adaptable Approach to Study RNA Regulatory Proteins	299
Jeff Collier and Marv Wickens	
1. Introduction and Rationale	300
2. The Basic Design of the Tethered Function Assay	302

3. The Tether	303
4. The Reporter mRNA	305
5. A Priori Considerations about the Logic of the Assay	307
6. Important Controls	308
7. Examples of the Tethered Function Assay in the Literature	312
8. Prospects	318
Acknowledgments	318
References	318
15. Analysis of Ribosomal Shunting During Translation Initiation in Eukaryotic mRNAs	323
Vincent P. Mauro, Stephen A. Chappell, and John Dresios	
1. Introduction	324
2. Defining the Site or Sites of Ribosomal Recruitment	324
3. Experimental Approaches to Determine Which Segments of an mRNA Are Shunted	334
4. Identification of Ribosomal Shunt Sites	339
5. Determining Whether Putative Shunt Sites Bind to Ribosomal Subunits	340
6. Assessing mRNA-rRNA Base Pairing in Yeast	344
7. Assessing Ribosomal Shunting Mediated by mRNA-rRNA Base Pairing Interactions	349
8. Considerations in Using the Mouse-Yeast Hybrid rRNA System	351
Acknowledgments	352
References	352
<i>Author Index</i>	355
<i>Subject Index</i>	371
