Section I. Nitric Oxide: Chemical and Analytical Methods 1

1. Chemistry of Nitric Oxide and Related Species 3

Martin N. Hughes

1. Introduction	4
2. Chemistry of NO	5
3. Compounds Related to NO	8
4. Nitrous Acid, Nitrosation, and S-Nitrosothiols	11
5. Reactions of Peroxynitrite, ONOO^-	12
6. Nitrogen Dioxide	13
7. Nitrosative Stress and Reactive Nitrogen Species	14
8. NO Complexes with Metal Centers	14
9. Mobilization of Metal Ions from Biological Sites by NO	15
10. Scavenging NO with Metal Complexes	16
References	16

2. Delivery of Nitric Oxide for Analysis of the Function of Cytochrome c' 21

Lindsay J. Cole, Wilhelmina M. Huston, and James W. B. Moir

1. Introduction	21
2. Steady-State Titration and Addition of NO into Anaerobic Cytochrome c'	22
3. Stopped-Flow Analysis of NO Ferrous Cytochrome c' Formation	28
References	32

3. The Preparation and Purification of NO Gas and the Use of NO Releasers: The Application of NO Donors and Other Agents of Nitrosative Stress in Biological Systems 35

Rubina G. Aga and Martin N. Hughes

1. Introduction	36
2. Supply of NO	37

3. NO Releasers	40
4. Applications to Nitrosative Stress	44
References	46
4. The Chemistry of Peroxynitrite: Implications for Biological Activity	49
Sara Goldstein and Gabor Merényi	
1. Introduction	50
2. Mechanism of Peroxynitrite Decomposition in Aqueous Solutions	51
3. Reactivity of Peroxynitrite	52
4. The Radical Model <i>In Vivo</i>	54
5. Nitration of Tyrosine	55
6. Summary	57
Acknowledgments	57
References	57
5. Nitric Oxide Selective Electrodes	63
Ian R. Davies and Xueji Zhang	
1. Significance of NO in Life Science	64
2. Methods of NO Measurement in Physiology	64
3. Advantages of Electrochemical Sensors for Determination of NO	65
4. Principles of Determination of NO by Electrochemical Sensors	65
5. Fabrication of Electrodes for NO Determination	66
6. Calibration of NO Electrodes	71
7. Characterization of NO Electrodes	74
8. Selected Applications of NO Electrodes	78
9. Concluding Remarks and Other Directions	88
Acknowledgments	88
References	88
6. NO, N₂O, and O₂ Reaction Kinetics: Scope and Limitations of the Clark Electrode	97
L. A. M. Pouvreau, M. J. F. Strampraad, S. Van Berloo, J. H. Kattenberg, and S. de Vries	
1. Introduction	98
2. Materials	99
3. The Clark Electrode Holder	99
4. Schematics of the Clark-Electrode Setup	101
5. Performance of the Apparatus	103
6. Scope and Limitations of the Clark Electrode	109

Acknowledgments	110
References	111
7. Chemiluminescence Quantification of NO and Its Derivatives in Liquid Samples	113
Jay R. Laver, Tânia M. Stevanin, and Robert C. Read	
1. Introduction	114
2. Methods	117
3. Applications	124
4. Final Remarks	125
Acknowledgments	126
References	126
Section II. Bacterial and Archaeal Hemoglobins	129
8. Interactions of NO with Hemoglobin: From Microbes to Man	130
Michael Angelo, Alfred Hausladen, David J. Singel, and Jonathan S. Stamler	
1. Introduction	132
2. Microbes, Plants, and Invertebrates	133
4. Yeast and Fungi	139
5. Plants	140
6. Invertebrates	146
7. Mammals and Birds	149
8. Experimental Design	157
9. Concluding Remarks	159
References	159
9. A Survey of Methods for the Purification of Microbial Flavohemoglobins	169
Megan E. S. Lewis, Hazel A. Corker, Bridget Gollan, and Robert K. Poole	
1. Introduction	170
2. The "BC" Era of Flavohemoglobin Purification and Characterization	178
3. Methods for Expression and Purification of <i>E. coli</i> Hmp	179
Acknowledgments	182
References	182
10. Structural Studies on Flavohemoglobins	187
Andrea Ilari and Alberto Boffi	
1. Introduction	188
2. X-ray Structure of <i>A. Eutrophus</i> Flavohemoglobin	189

3. X-ray Structure of <i>E. Coli</i> Flavohemoglobin	192
4. Structural Comparison Between <i>A. Eutrophus</i> and <i>E. coli</i> Flavohemoglobins	193
Acknowledgments	201
References	201
11. Flavohemoglobin of <i>Staphylococcus aureus</i>	203
Lígia S. Nobre, Vera L. Gonçalves, and Lígia M. Saraiva	
1. Introduction	204
2. Preparation of Recombinant <i>S. aureus</i> Hmp	204
3. Nitrosative Protection of <i>S. aureus</i> by Hmp	209
4. Discussion	212
Acknowledgments	214
References	215
12. Assay and Characterization of the NO Dioxygenase Activity of Flavohemoglobins	217
Paul R. Gardner	
1. Introduction	218
2. The •NO Dioxygenase Mechanism	218
3. Susceptibility of the •NO Dioxygenase to •NO Inhibition	219
4. Autooxidation of Hemoglobins and •NO Decomposition	222
5. Methemoglobin Reduction	223
6. Heme and Flavin Cofactors	224
7. •NO Dioxygenase Assays	225
8. Preparation of •NO-, CO-, and O ₂ -Saturated Solutions	229
9. Assay of Heme and FAD Content	232
10. Reconstitution of Flavohemoglobin with Heme	233
11. Assay for Nitrate and Nitrite Reaction Products	234
12. Conclusions	235
Acknowledgments	235
References	235
13. Globin Interactions with Lipids and Membranes	239
Antonio Di Giulio and Alessandra Bonamore	
1. Introduction	240
2. Lipid Extraction	241
3. Qualitative Analysis of Total Lipid Extracts	242
4. Hemoglobin-Liposome Binding Studies	242
5. Lipid Monolayers as Models for Globin-Membrane Interaction Studies	245

6. Lipid Binding Measurement by Absorption Spectroscopy	248
7. Conclusions	251
Acknowledgments	252
References	252
14. Assessment of Biotechnologically Relevant Characteristics of Heterologous Hemoglobins in <i>E. coli</i>	255
Pauli T. Kallio, Christian J. T. Bollinger, Taina Koskenkorva, and Alexander D. Frey	
1. Introduction	256
2. Expression Strategy	260
3. Considerations for the Choice of Growth Medium	262
4. Cofactor Imitation	263
5. Microaerobic Fed-Batch Cultivations	264
6. Physiological Analysis	267
7. Verification of Expression of Globin Proteins	269
References	270
15. Applications of the VHb Gene <i>vgb</i> for Improved Microbial Fermentation Processes	273
Xiao-Xing Wei and Guo-Qiang Chen	
1. Introduction	274
2. VHb Application in Microbial Metabolic Engineering	275
3. Effect of VHb on Protein Production	276
4. Effect of VHb on Polyhydroxyalkanoate Production	279
5. Effect of VHb on Antibiotic Production	281
6. Application of VHb in Bioremediation	281
7. Application of <i>vgb</i> Promoter	282
8. Future Prospects	283
References	283
16. Expression and Purification of Cgb and Ctb, the NO-Inducible Globins of the Foodborne Bacterial Pathogen <i>C. jejuni</i>	289
James L. Pickford, Laura Wainwright, Guanghui Wu, and Robert K. Poole	
1. Introduction	290
2. Methods for Cloning, Expression, and Purification of Cgb	293
3. Methods for Cloning, Expression, and Purification of Ctb	296
Acknowledgments	300
References	300

17. Mapping Heme-Ligand Tunnels in Group I Truncated(2/2) Hemoglobins	303
Alessandra Pesce, Mario Milani, Marco Nardini, and Martino Bolognesi	
1. Introduction	304
2. The 2/2 Hemoglobin Fold	305
3. Protein Cavities/Tunnel and Ligand Entry	306
4. Experimental Procedures	308
5. Results	310
6. Conclusions	312
Acknowledgments	313
References	313
18. Scavenging of Reactive Nitrogen Species by Mycobacterial Truncated Hemoglobins	317
Paolo Ascenzi and Paolo Visca	
1. Introduction	318
2. Materials	319
3. •NO Scavenging by <i>M. tuberculosis</i> trHbN(II)-O ₂ and trHbO(II)-O ₂ and by <i>M. leprae</i> trHbO(II)-O ₂	321
4. Peroxynitrite Scavenging by trHbO(II)-O ₂	326
5. Peroxynitrite Scavenging by <i>M. leprae</i> trHbO(II)-NO	329
6. Structural Background	331
Acknowledgments	332
References	333
Section III. Other Hemoglobins	339
19. Expression, Purification, and Crystallization of Neuro- and Cytoglobin	341
Sylvia Dewilde, Kirsten Mees, Laurent Kiger, Christophe Lechauve, Michael C. Marden, Alessandra Pesce, Martino Bolognesi, and Luc Moens	
1. Introduction	342
2. Expression and Preparative Purification of Human Wild-Type NGB	343
3. Expression and Preparative Purification of Human Wild-Type CYGB	347
4. Alternative Methods for the Preparative Purification of Recombinant Ngb and Cygb and their Mutants	349
5. Analytical Purification of Recombinant Ngb and Cygb	350
6. Crystallization of NGB and CYGB	355
Acknowledgments	356
References	356

20. Measurement of Distal Histidine Coordination Equilibrium and Kinetics in Hexacoordinate Hemoglobins	359
Benoit J. Smagghe, Puspita Halder, and Mark S. Hargrove	
1. Introduction	360
2. Ligand Binding to h _x	361
3. Reactions in the Ferrous Oxidation State	363
4. Reactions in the Ferric Oxidation State	367
5. Measurement of K_H in the Ferrous Oxidation State Using Absorbance Spectroscopy	370
6. Measurement of K_H by Electrochemistry	371
7. Conclusions	376
References	376
21. Purification of Class 1 Plant Hemoglobins and Examination of Their Functional Properties	379
Abir U. Igamberdiev and Robert D. Hill	
1. Introduction	380
2. Purification of Barley Hemoglobin	380
3. Measurement of NO Scavenging Activity	384
4. Identification of a Methemoglobin Reductase	386
5. Conclusion	389
References	390
22. Use of <i>In Silico</i> (Computer) Methods to Predict and Analyze the Tertiary Structure of Plant Hemoglobins	393
Sabarinathan Kuttalingam Gopalasubramaniam, Verónica Garrocho-Villegas, Genoveva Bustos Rivera, Nina Pastor, and Raúl Arredondo-Peter	
1. Introduction	394
2. An <i>In Silico</i> Method for Predicting the Tertiary Structure of Rice Hb2	401
3. Image Editing to Generate High-Quality Figures	406
Acknowledgments	409
References	409
23. A Self-Induction Method to Produce High Quantities of Recombinant Functional Flavo-Leghemoglobin Reductase	411
Estibaliz Urarte, Iñigo Auzmendi, Selene Rol, Idoia Ariz, Pedro Aparicio-Tejo, Raúl Arredondo-Peter, and Jose F. Moran	
1. Introduction	412
2. A Self-Induction System for Overexpression of FLbR2	414

3. Spectroscopic Methods	416
4. Results	417
5. Conclusions	421
Acknowledgments	422
References	422
24. Spectroscopic and Crystallographic Characterization of bis-Histidyl Adducts in Tetrameric Hemoglobins	425
Alessandro Vergara, Luigi Vitagliano, Cinzia Verde, Guido di Prisco, and Lelio Mazzarella	
1. Introduction	426
2. Antarctic Fish Hemoglobins	427
3. Overview of the Combined Spectroscopic/Crystallographic Approach to the Characterization of Hemichrome in Tetrameric Hbs	428
4. Hemichrome Formation and Detection	429
5. Structural Characterization of Hemichrome in Tetrameric Hbs	434
6. Conclusions	440
Acknowledgments	440
References	440
25. Dinitrosyl Iron Complexes Bind with Hemoglobin as Markers of Oxidative Stress	445
Konstantin B. Shumaev, Olga V. Kosmachevskaya, Alexander A. Timoshin, Anatoly F. Vanin, and Alexey F. Topunov	
1. Introduction	446
2. Formation of Hb-DNIC <i>In Vivo</i>	449
3. Influence of Hb-DNIC on Free Radical Generation During Hb's Interaction with <i>tert</i> -Butyl Hydroperoxide	451
4. Study of Oxidative Hb Modification by SDS Electrophoresis	451
5. Influence of Hb-DNIC on Oxidative Modification of Hb Under the Action of Hydrogen Peroxide	452
6. Influence of <i>tert</i> -Butyl Hydroperoxide and Hydrogen Peroxide on Hb-DNIC	454
7. Superoxide-Dependent Destruction of Hb-DNIC	456
8. Conclusion	459
Acknowledgments	459
References	460

26. Linked Analysis of Large Cooperative, Allosteric Systems: The Case of the Giant HBL Hemoglobins	463
Nadja Hellmann, Roy E. Weber, and Heinz Decker	
1. Introduction	464
2. Materials	466
3. Theory	466
4. HBL Hb from <i>L. terrestris</i>	473
5. HBL Hb from <i>M. decora</i>	476
6. What Is the Advantage of Hierarchical Function?	478
7. Concluding Remarks	480
Appendix A	481
References	483
27. Mass Mapping of Large Globin Complexes by Scanning Transmission Electron Microscopy	487
Joseph S. Wall, Martha N. Simon, Beth Y. Lin, and Serge N. Vinogradov	
1. Introduction	488
2. Description of STEM Mass Mapping	488
3. Advantages of STEM	490
4. STEM Specimen Preparation	492
5. Limitations of STEM	493
6. STEM Operation	496
7. Interactive Mass Mapping with PCMass	496
8. Performance Checks	498
9. Applications	499
References	501
28. Mini-Hemoglobins from Nemertean Worms	503
Thomas L. Vandergon and Austen F. Riggs	
1. Background	503
2. Isolation and Purification of <i>C. lacteus</i> Hb	504
3. Other Nemertean Hbs	507
References	508
29. Comparative and Evolutionary Genomics of Globin Genes in Fish	511
Enrico Negrísolo, Luca Bargelloni, Tomaso Patarnello, Catherine Ozouf-Costaz, Eva Pisano, Guido di Prisco, and Cinzia Verde	
1. Introduction	512
2. Comparative Genomics of Fish Globin Genes	513

3. Evolution of Globins and Identification of Functionally Relevant Amino Acid Residues	520
4. An Example of Comparative Genomics in Fish Globins	523
5. Cytogenetic Methods for Comparative Genomics: Fluorescence <i>In Situ</i> Hybridization	526
References	532
30. Inferring Evolution of Fish Proteins: The Globin Case Study	539
Agnes Dettai, Guido di Prisco, Guillaume Lecointre, Elio Parisi, and Cinzia Verde	
1. Introduction	540
2. Hb Purification	542
3. Elucidation of Globin Primary Structure	542
4. Globin Characterization	545
5. Sequence Analysis	546
6. Phylogenetic Analysis	548
7. Bringing Phylogenetics and Structural Analysis Together	559
8. General Remarks	564
Acknowledgments	565
References	565
31. Tracing Globin Phylogeny Using PSIBLAST Searches Based on Groups of Sequences	571
Serge N. Vinogradov	
1. Introduction	572
2. Statistical Evaluation of Sequence Similarity	573
3. Verification of Globin Sequence Alignments	574
4. A New Paradigm in Globin Classification	575
5. Tracing Phylogenetic Relationships via PSIBLAST Searches	576
References	581
<i>Author Index</i>	585
<i>Subject Index</i>	615
