1. Approaches for Studying Angiogenesis-Related Signal Transduction 1

Behrad Derakhshan, Kenneth D. Harrison, Qing Robert Miao,
and William C. Sessa

1. Introduction	2
2. Angiogenesis	2
3. Phosphorylation of eNOS on Ser1179	8
4. Measuring Released NO by No-Specific Chemiluminescence	13
5. Concluding Remarks	18
References	19

2. Physiologic Stress-Mediated Signaling in the Endothelium 25

Cynthia A. Reinhart-King, Keigi Fujiwara, and Bradford C. Berk

1. Introduction	26
2. Parallel Plate Flow System	29
3. Cone and Plate Flow System	35
4. Cyclic Stretching of the Endothelium	38
Acknowledgments	42
References	42

3. Endothelial Cell Adhesion and Migration 45

Cynthia A. Reinhart-King

1. Introduction	46
2. Cell Preparation	48
3. Preparation of Well-Defined Surfaces	49
4. Preparation of Polyacrylamide Substrates for Cell Adhesion Studies	50
5. Quantifying Cell Adhesion	54

6. Quantifying Endothelial Cell Migration	56
References	61
4. An Optimized Three-Dimensional <i>In Vitro</i> Model for the Analysis of Angiogenesis	65
Martin N. Nakatsu and Christopher C. W. Hughes	
1. Overview	66
2. Fibrin Bead Assay	69
3. Immunocytochemistry of Angiogenic Sprouts <i>In Vitro</i>	73
4. Retroviral Transduction of EC	75
5. Laser Capture Microdissection	76
6. Discussion	78
References	79
5. <i>In Vitro</i> Three Dimensional Collagen Matrix Models of Endothelial Lumen Formation During Vasculogenesis and Angiogenesis	83
Wonshill Koh, Amber N. Stratman, Anastasia Sacharidou, and George E. Davis	
1. Introduction	84
2. <i>In Vitro</i> Models of Vasculogenesis and Angiogenesis in 3D Collagen Matrices	86
3. Molecular/Genetic Manipulation of ECs	93
4. Rho GTPase Activation Assay During EC Tube Morphogenesis in 3D Collagen Matrices	95
5. Biochemical Analysis of Interactions Between Cdc42 and its Downstream Effectors During EC Lumen and Tube Formation in 3D Collagen Matrices	96
6. Conclusions	98
Acknowledgments	99
References	99
6. <i>In Vitro</i> Differentiation of Mouse Embryonic Stem Cells into Primitive Blood Vessels	103
Svetlana N. Rylova, Paramjeet K. Randhawa, and Victoria L. Bautch	
1. Introduction	104
2. Maintenance of ES Cells	107
3. Generation of Transgenic ES Cell Lines	111
2. Concluding Remarks	115
Acknowledgments	115
References	116

7. The Aortic Ring Model of Angiogenesis	119
Alfred C. Aplin, Eric Fogel, Penelope Zorzi, and Roberto F. Nicosia	
1. Introduction	120
2. Aortic Ring Angiogenesis Model: Basic Protocol	122
3. Protocols for Analysis of Aortic Cultures	127
4. Modifications of Basic Protocol	129
5. Troubleshooting	132
6. Concluding Remarks	133
References	134
8. An Assay System for <i>In Vitro</i> Detection of Permeability in Human "Endothelium"	137
Manuela Martins-Green, Melissa Petreaca, and Min Yao	
1. Introduction	138
2. Generation of a Human Endothelium Model for Permeability Studies	140
3. Conclusion	149
Acknowledgments	151
References	151
9. Assays of Transendothelial Migration <i>In Vitro</i>	155
William A. Muller and F. William Luscinskas	
1. Introduction	156
2. Methods for Investigating Leukocyte Transendothelial Migration Under Static or Flow Conditions <i>In Vitro</i>	156
Acknowledgments	174
References	174
10. Cell Mechanics at Multiple Scales	177
Maxine Jonas, Peter T. C. So, and Hayden Huang	
1. Introduction	178
2. Large-Scale Cell Stretching	179
3. Magnetic Micromanipulation	181
4. Fluorescent Laser Tracking Microrheology	186
5. General Summary and Conclusion	196
Acknowledgments	197
References	197

11. Vascular Integrin Signaling	199
Ganapati H. Mahabeleshwar and Tatiana V. Byzova	
1. Introduction	199
2. Integrin-Mediated Cell Adhesion	202
3. Analysis of Integrin-Dependent Cell Migration	204
4. Roles of Integrins in Endothelial Angiogenic Programming	210
5. Integrin Affinity Modulation and Its Analysis	217
6. Integrin and ECM Roles in Endothelial Cell Proliferation and Apoptosis	220
Acknowledgment	224
References	224
12. Methods for Studying Mechanical Control of Angiogenesis by the Cytoskeleton and Extracellular Matrix	227
Akiko Mammoto, Julia E. Sero, Tadanori Mammoto, and Donald E. Ingber	
1. Introduction	228
2. Control of CE Cell Behavior with Different ECM Coating Densities	229
3. Control of CE Cell Fate Switching by Use of Microfabricated ECM Islands	232
4. Control of Cell Fate Switching by Modulating the Cytoskeleton	240
5. Analysis of the Mechanism of Cell Shape-Dependent Growth Control	243
6. Methods for Analyzing Rho-Dependent Control of Cell Growth and Movement	246
7. Rho-Dependent Control of Angiogenesis in Whole Organ Culture	248
8. Rho-Dependent Control of Vascular Permeability	251
9. Conclusion	253
Acknowledgments	254
References	254
13. VEGF Receptor Signal Transduction	261
Xiujuan Li, Lena Claesson-Welsh, and Masabumi Shibuya	
1. Introduction	262
2. Methods	264
3. Conclusions	282
Acknowledgments	283
References	283

14. Analysis of Low Molecular Weight GTPase Activity in Endothelial Cell Cultures	285
Erika S. Wittchen and Keith Burrige	
1. Introduction	285
2. Methods and Results	287
Acknowledgments	297
References	297
15. Semaphorin-Induced Cytoskeletal Collapse and Repulsion of Endothelial Cells	299
Diane R. Bielenberg, Akio Shimizu, and Michael Klagsbrun	
1. Introduction	300
2. Purification of Human Recombinant SEMA3F	301
3. SEMA3F-induced Endothelial Cell Collapse	305
4. Endothelial Cell Repulsion Assay	308
References	313
16. Pericyte Isolation and Use in Endothelial/Pericyte Coculture Models	315
Brad A. Bryan and Patricia A. D'Amore	
1. Introduction	316
2. Protocol for Isolating Pericytes	319
3. Protocol for Multipotent Mesenchymal Cells as Pericyte Precursors	321
4. Protocol for Two-Dimensional Pericyte-EC Coculture	322
5. Protocol for 3-Dimensional Pericyte-EC Coculture	326
6. Protocol for Differential Labeling of Pericytes and Endothelial Cells	328
Acknowledgments	329
References	329
<i>Author Index</i>	333
