| CONTENTS OF VOLUMES 35-46.....  | ix  |

### The Plant Nucleolus

JULIO SÁEZ-VÁSQUEZ AND FRANCISCO JAVIER MEDINA

|                                                                                                  |    |
|--------------------------------------------------------------------------------------------------|----|
| I. The Structure of the Plant Nucleolus .....                                                    | 2  |
| II. The Nucleolus During the Cell Cycle .....                                                    | 15 |
| III. Nucleolar Protein Factors: Their Role in Ribosome Biogenesis<br>and Plant Development. .... | 21 |
| IV. Perspectives. ....                                                                           | 31 |
| Acknowledgments .....                                                                            | 34 |
| References .....                                                                                 | 35 |

### Expansins in Plant Development

DONGSU CHOI, JEONG HOE KIM AND YI LEE

|                                                                                                          |    |
|----------------------------------------------------------------------------------------------------------|----|
| I. Introduction .....                                                                                    | 48 |
| II. The Expansin Superfamily .....                                                                       | 50 |
| III. Evolution of Expansin Genes. ....                                                                   | 57 |
| IV. Biochemical and Biophysical Properties of Expansins .....                                            | 59 |
| V. Expansins in Vegetative Growth and Development .....                                                  | 63 |
| VI. Expansins in Reproductive Growth and Development. ....                                               | 79 |
| VII. Expansins in Fruit Development.....                                                                 | 83 |
| VIII. Future Prospects: Further Understanding of Expansin Function<br>and Agricultural Application ..... | 87 |
| Acknowledgments .....                                                                                    | 89 |
| References .....                                                                                         | 89 |

### Molecular Biology of Orchid Flowers: With Emphasis on *Phalaenopsis*

WEN-CHIEH TSAI, YU-YUN HSIAO, ZHAO-JUN PAN,  
CHIA-CHI HSU, YA-PING YANG, WEN-HUEI CHEN  
AND HONG-HWA CHEN

|                                                |     |
|------------------------------------------------|-----|
| I. Introduction to Orchid Flower Biology ..... | 100 |
| II. Recent Progress in Orchid Genomics .....   | 103 |

|                                                                  |     |
|------------------------------------------------------------------|-----|
| III. Molecular Biology of Orchid Floral Development .....        | 111 |
| IV. Regulation of Orchid Flowering .....                         | 122 |
| V. Molecular Biology of Orchid Scent Production .....            | 125 |
| VI. Molecular Biology of Orchid Flower Colour Presentation ..... | 132 |
| VII. Conclusion .....                                            | 134 |
| Acknowledgments .....                                            | 135 |
| References .....                                                 | 135 |

### **Molecular Physiology of Development and Quality of Citrus**

FRANCISCO R. TADEO, MANUEL CERCÓS,  
 JOSÉ M. COLMENERO-FLORES, DOMINGO J. IGLESIAS,  
 MIGUEL A. NARANJO, GABINO RÍOS, ESTHER CARRERA,  
 OMAR RUIZ-RIVERO, IGNACIO LLISO, RAPHAËL MORILLON,  
 PATRICK OLLITRAULT AND MANUEL TALON

|                                                                    |     |
|--------------------------------------------------------------------|-----|
| I. Fruit Quality in Citrus is Mostly a Consumer's Preference ..... | 148 |
| II. Citrus Flowering .....                                         | 152 |
| III. Citrus Fruiting .....                                         | 156 |
| IV. It is Just not Food .....                                      | 172 |
| V. Fruit Quality Only in Quality Environments .....                | 183 |
| VI. Citrus Abscission .....                                        | 192 |
| VII. Concluding Remarks and Perspectives .....                     | 198 |
| Acknowledgments .....                                              | 202 |
| References .....                                                   | 202 |

### **Bamboo Taxonomy and Diversity in the Era of Molecular Markers**

MALAY DAS, SAMIK BHATTACHARYA,  
 PARAMJIT SINGH, TARCISO S. FILGUEIRAS  
 AND AMITA PAL

|                                                                             |     |
|-----------------------------------------------------------------------------|-----|
| I. Introduction .....                                                       | 226 |
| II. Implications of Various Morphological Features in Bamboo Taxonomy ..... | 230 |
| III. Bamboo Classifications Based on Morphological Features .....           | 235 |
| IV. Conspectus of Woody Bamboo Genera of the World .....                    | 238 |
| V. Relevance of Molecular Taxonomy in Bamboo .....                          | 239 |
| VI. DNA Fingerprinting-Based Methods .....                                  | 240 |
| VII. DNA Sequence-Based Methods .....                                       | 245 |
| VIII. Summary and Future Directions .....                                   | 252 |
| Acknowledgments .....                                                       | 260 |
| References .....                                                            | 260 |
