Preface	xxi
---------	-----

PART I Fluorochromes/General Techniques

1. Principles of Confocal Microscopy

J. Paul Robinson, Jennifer Sturgis, and Bartek Rajwa

I. Brief History of Microscope Development	3
II. Development of Confocal Microscopy	4
III. Image Formation in Confocal Microscopy	5
IV. Useful Fluorescent Probes for Confocal Microscopy	15
V. Applications of Confocal Microscopy	17
VI. Conclusions	23
References	24

2. Protein Labeling with Fluorescent Probes

Kevin L. Holmes and Larry M. Lantz

I. Update	29
II. Introduction	32
III. Labeling of Proteins with Organic Fluorescent Dyes	32
IV. Labeling of Antibodies with Zenon Probes	42
V. Labeling of Proteins with Phycobiliproteins	44
VI. Conclusion	51
References	51

3. Cytometry of Fluorescence Resonance Energy Transfer

György Vereb, János Matkó, and János Szöllösi

I. Introduction	55
II. Theory of FRET	57
III. Measuring FRET	58
IV. Applications	83
V. Perspectives	94

VI. Conclusions	98
References	99
 4. The Rainbow of Fluorescent Proteins	
David W. Galbraith	
I. Update	109
II. The Fluorescent Proteins	111
III. Flow Analysis Using Fluorescent Proteins	117
IV. Flow Sorting Using Fluorescent Proteins	121
V. Conclusion	122
References	123
 5. Labeling Cellular Targets with Semiconductor Quantum Dot Conjugates	
Kary L. Oakleaf, Michael S. Janes, Xingyong Wu, and Marcel P. Bruchez	
I. Introduction	129
II. Selection of QDs and their Conjugates	130
III. Labeling of Fixed Cells for Fluorescence Microscopy	131
IV. Measurements in Living Cells Using QD Conjugates	137
V. Conclusion	139
References	140
 6. High-Gradient Magnetic Cell Sorting	
Andreas Radbruch, Andreas Grützkau, Birgit Mechtold, Andreas Thiel, Stefan Miltenyi, and Eckhard Pflüger	
I. Update	144
II. Introduction	145
III. Application	147
IV. Materials	148
V. MACS: Staining and Sorting	149
VI. Critical Aspects of the Procedure	152
VII. Controls	154
VIII. Instruments	155
IX. Results	155
References	159
 7. Multiplexed Microsphere Assays (MMAs) for Protein and DNA Binding Reactions	
Kathryn L. Kellar and Kerry G. Oliver	
I. Update	162
II. Introduction	163

III. Technology and Instrumentation	164
IV. Methods	168
V. Results	171
VI. Software	174
VII. Critical Aspects of the Methodology	175
VIII. Comparison with Other Methods	176
IX. Future Directions	177
References	178

8. Biohazard Sorting

*Ingrid Schmid, Mario Roederer, Richard A. Koup, David Ambrozak,
Stephen P. Perfetto, and Kevin L. Holmes*

I. Recent Developments	183
II. Introduction	186
III. Critical Aspects of the Procedure	186
IV. Applications and Future Directions	202
References	203

9. Guidelines for the Presentation of Flow Cytometric Data

Mario Roederer, Zbigniew Darzynkiewicz, and David R. Parks

I. Introduction	205
II. General Principles of Graphical Presentation	206
III. Statistics	214
IV. Subset Analysis	218
V. Conclusion	219
References	219

PART II Cellular DNA Content Analysis

10. Detergent and Proteolytic Enzyme-Based Techniques for Nuclear Isolation and DNA Content Analysis

Lars L. Vindeløv and Ib Jarle Christensen

I. Introduction	224
II. Basic Principles of the Methods	225
III. Applications	226
IV. Materials	227
V. Methods	228
VI. Results	233
References	233

11. DNA Content and Cell Cycle Analysis by the Propidium Iodide-Hypotonic Citrate Method	
<i>Autar Krishan and Ronald Hamelik</i>	
I. Introduction	235
II. Application	236
III. Materials	236
IV. Staining Procedure	237
V. Caution	238
VI. Instrument Setup	238
VII. Comments	238
VIII. Results	238
References	239
 12. DNA Analysis from Paraffin-Embedded Blocks	
<i>David W. Hedley</i>	
I. Introduction	242
II. Application	242
III. Methods	242
IV. Critical Aspects of Technique	245
V. Alternative Methods for Sample Preparation	248
References	250
 13. Flow Cytometry and Sorting of Plant Protoplasts and Cells	
<i>David W. Galbraith</i>	
I. Update	252
II. Introduction	254
III. Application	256
IV. Materials	256
V. Procedures	256
VI. Critical Aspects of the Procedures	263
VII. Controls and Standards	266
VIII. Instruments	266
IX. Results	267
References	273
 14. DNA Content Histogram and Cell-Cycle Analysis	
<i>Peter S. Rabinovitch</i>	
I. Introduction	276
II. DNA Content Histogram Basic Principles	276

III. Cell-Cycle Analysis of DNA Content Histograms	278
IV. Critical Aspects of DNA Content and Cell-Cycle Analysis	280
V. Interpretation of DNA Content and Cell-Cycle Histograms	296
VI. Conclusion	304
References	304
 15. Simultaneous Analysis of Cellular RNA and DNA Content	
<i>Zbigniew Darzynkiewicz</i>	
I. Update	308
II. Introduction	309
III. Applications	313
IV. Materials	314
V. Staining Procedures Employing AO	316
VI. Staining RNA and DNA with PY and Hoechst 33342	317
VII. Critical Aspects of the Procedures	317
VIII. Controls and Standards	320
IX. Instruments	321
X. Results	322
XI. Comparison of the Methods	323
References	325

PART III Cell Proliferation and the Death Assays

16. Immunochemical Quantitation of Bromodeoxyuridine: Application to Cell-Cycle Kinetics	
<i>Frank Dolbeare and Jules R. Selden</i>	
I. Update	332
II. Introduction	333
III. Applications	333
IV. Materials	334
V. Procedures	338
VI. Critical Aspects of the Procedure	343
VII. Controls and Standards	344
VIII. Instruments	345
IX. Results	345
X. Summary	349
References	349
 17. Cell-Cycle Kinetics Estimated by Analysis of Bromodeoxyuridine Incorporation	
<i>Nicholas H. A. Terry and R. Allen White</i>	
I. Introduction	354
II. Applications	356

III. Materials	356
IV. Methods	358
V. Critical Aspects of the Procedure	368
References	370
 18. Flow Cytometric Analysis of Cell Division History Using Dilution of Carboxyfluorescein Diacetate Succinimidyl Ester, a Stably Integrated Fluorescent Probe	
<i>A. Bruce Lyons, Jhagvaral Hasbold, and Philip D. Hodgkin</i>	
I. Introduction and Background	374
II. Reagents and Solutions	376
III. Preparation and Labeling of Cells	376
IV. Gathering of Information Concurrent with Division	379
V. Analysis of Data	384
VI. Application of Carboxyfluorescein Diacetate Succinimidyl Ester to <i>In Vitro</i> Culture of Lymphocytes	388
VII. Monitoring Lymphocyte Responses <i>In Vivo</i>	390
VIII. Antigen Receptor Transgenic Models	394
References	394
 19. Antibodies Against the Ki-67 Protein: Assessment of the Growth Fraction and Tools for Cell Cycle Analysis	
<i>Elmar Endl, Christiane Hollmann, and Johannes Gerdes</i>	
I. Introduction	397
II. Application	399
III. Materials and Methods	400
IV. Critical Aspects	407
V. Controls and Standards	407
VI. Examples of Results	408
References	412
 20. Detection of DNA Damage in Individual Cells by Analysis of Histone H2AX Phosphorylation	
<i>Peggy L. Olive</i>	
I. Update	418
II. Introduction	419
III. Considerations in the Use of γ H2AX as a Measure of Double-Stranded Breaks	420
IV. Methods of Analysis	422
V. Typical Results	425

VI. Possible Applications	432
VII. Conclusion	434
References	435
 21. Assays of Cell Viability: Discrimination of Cells Dying by Apoptosis	
<i>Zbigniew Darzynkiewicz, Xun Li, and Jianping Gong</i>	
I. Update	438
II. Introduction	440
III. Changes in Light Scatter During Cell Death	443
IV. Cell Sensitivity to Trypsin and DNase	444
V. Fluorescein Diacetate (FDA) Hydrolysis and PI Exclusion	445
VI. Rh123 Uptake and PI Exclusion	446
VII. PI Exclusion Followed by Counterstaining with Hoechst 33342	446
VIII. Hoechst 33342 Active Uptake and PI Exclusion	448
IX. Controlled Extraction of Low MW DNA from Apoptotic Cells	449
X. Sensitivity of DNA <i>In Situ</i> to Denaturation	452
XI. Detection of DNA Strand Breaks in Apoptotic Cells	452
XII. A Selective Procedure for DNA Extraction from Apoptotic Cells Applicable to Gel Electrophoresis and Flow Cytometry	456
XIII. Comparison of the Methods: Confirmation of the Apoptotic Mode of Cell Death	459
References	460
 22. Difficulties and Pitfalls in Analysis of Apoptosis	
<i>Zbigniew Darzynkiewicz, Elżbieta Bedner, and Frank Traganos</i>	
I. Update	463
II. Introduction	464
III. AI may not be Correlated with Incidence of Cell Death	466
IV. Difficulties in Estimating Frequency of Apoptosis by Analysis of DNA Fragmentation	468
V. The Lack of Evidence is not Evidence for the Lack of Apoptosis	468
VI. Misclassification of Apoptotic Bodies or Nuclear Fragments as Single Apoptotic Cells	469
VII. Apoptosis Versus Necrosis Versus "Necrotic Stage" of Apoptosis	471
VIII. Selective Loss of Apoptotic Cells During Sample Preparation	473
IX. Live Cells Engulfing Apoptotic Bodies Masquerade as Apoptotic Cells	474
X. The Problems with Commercial Kits and Reagents	474
XI. Cell Morphology is still the Gold Standard for Identification of Apoptotic Cells	476
XII. Laser Scanning Cytometry: Have your Cake and Eat it too	476
References	480

PART IV Cell Surface Immunophenotyping

23. Cell Preparation for the Identification of Leukocytes

Carleton C. Stewart and Sigrid J. Stewart

I. Introduction	488
II. Antibodies	489
III. Tandem Fluorochromes	503
IV. Cell Preparation and Staining Procedures	505
V. Titering Antibodies	513
VI. Solutions and Reagents	518
References	519

24. Multicolor Immunophenotyping: Human Immune System Hematopoiesis

Brent Wood

I. Update	521
II. Introduction	522
III. Methodology	523
IV. Normal Immunophenotypic Patterns of Maturation	524
V. Abnormal Immunophenotypic Patterns of Maturation	536
References	538

25. Differential Diagnosis of T-Cell Lymphoproliferative Disorders by Flow Cytometry Immunophenotyping. Correlation with Morphology

Wojciech Gorczyca and Sorina Tugulea

I. Introduction	542
II. Materials	543
III. Methods	543
IV. Identification of Abnormal T-Cell Population by Flow Cytometry	544
V. Precursor T-Lymphoblastic Lymphoma/Leukemia (T-ALL)	552
VI. Peripheral (Mature/Postthymic) Lymphoma Versus T-ALL	552
VII. Thymocytes from Thymic Hyperplasia/Thymoma Versus T-ALL	553
VIII. Mature T-Cell Lymphoproliferative Disorders	554
IX. Conclusions	566
References	566

26. B Cell Immunophenotyping

Nicole Baumgarth

I. Update	577
II. Introduction	579

III. Immunophenotyping of B Cell Developmental Stages in the Bone Marrow	581
IV. Peripheral B Cell Populations	586
V. Summary	590
VI. Antigen-Induced B Cell Subsets	592
VII. Antigen-Specific B Cells	595
References	596

Part V Cytogenetics/Chromatin Structure

27. Telomere Length Measurements Using Fluorescence *In Situ* Hybridization and Flow Cytometry

Gabriela M. Baerlocher and Peter M. Lansdorp

I. Introduction	604
II. Background	609
III. Methods	611
IV. Results	622
V. Critical Aspects of Methodology	625
VI. Pitfalls and Misinterpretation of Data	627
VII. Comparison with Other Methods	628
VIII. Applications	629
IX. Future Directions	631
References	632

28. Sperm Chromatin Structure Assay: DNA Denaturability

Donald Evenson and Lorna Jost

I. Update	636
II. Introduction	636
III. Applications of the SCSA	638
IV. Materials	639
V. Cell Preparation	640
VI. Cell Staining and Measurement	643
VII. Instruments	644
VIII. Results and Discussion	646
IX. Critical Points	650
References	652

PART VI Cell Physiology Assays

29. Cell Membrane Potential Analysis

Howard M. Shapiro

I. Introduction	657
II. Materials and Methods	661

III. Improving Cytometry of Membrane Potentials	669
References	670
30. Measurement of Intracellular pH	
<i>Michael J. Boyer and David W. Hedley</i>	
I. Introduction	674
II. Application	678
III. Materials	678
IV. Cell Preparation and Staining: BCECF or SNARF	680
V. Instruments	680
VI. Critical Aspects	683
VII. Results and Discussion	685
References	686
31. Intracellular Ionized Calcium	
<i>Carl H. June and Peter S. Rabinovitch</i>	
I. Introduction	688
II. Flow Cytometric Assay with Indo-1	690
III. Use of Flow Cytometry and Fluo-3 to Measure $[Ca^{2+}]_i$	699
IV. Use of Flow Cytometry and Fluo-3/Fura-Red for Ratiometric Analysis of $[Ca^{2+}]_i$	699
V. Cell Conjugate Assays Combined with Calcium Analysis and Flow Cytometry	703
VI. Pitfalls and Critical Aspects	704
VII. Limitations	707
VIII. Results	708
References	710
32. Oxidative Product Formation Analysis by Flow Cytometry	
<i>J. Paul Robinson, Wayne O. Carter, and Padma Kumar Narayanan</i>	
I. Introduction	714
II. Oxidative Burst	714
III. Phagocytosis	718
IV. Controls and Standards	723
References	723
33. Phagocyte Function	
<i>Gregor Rothe and Mariam Klouche</i>	
I. Update	726
II. Introduction	727

III. Background	737
IV. Methods	741
V. Results	744
VI. Pitfalls and Misinterpretation of the Data	745
VII. Comparison with Other Methods	747
VIII. Applications and Biomedical Information	747
IX. Future Directions	749
References	750
34. Analysis of RNA Synthesis by Cytometry	
<i>Peter Østrup Jensen, Jacob Larsen, and Jørgen K. Larsen</i>	
I. Update	757
II. Introduction	758
III. Background	758
IV. Methods for Analysis of 5'-Bromouridine Incorporation and DNA Content	759
V. Results of Labeling RNA with 5'-Bromouridine	762
VI. Applications	764
References	766
35. Analysis of Mitochondria by Flow Cytometry	
<i>Martin Poot and Robert H. Pierce</i>	
I. Introduction	770
II. Materials and Methods	773
III. Critical Aspects	777
References	778
36. Analysis of Platelets by Flow Cytometry	
<i>Kenneth A. Ault and Jane Mitchell</i>	
I. Introduction	781
II. Applications	783
III. Materials	785
IV. Cell Preparation	786
V. Staining	788
VI. Critical Aspects	790
VII. Standards	791
VIII. Instrument	792
IX. Results and Discussion	792
References	798

PART VII Detection of Microorganisms and Pathogens

37. Detection of Specific Microorganisms in Environmental Samples Using Flow Cytometry

Graham Vesey, Joe Narai, Nicholas Ashbolt, Keith Williams, and Duncan Veal

I. Introduction	804
II. Preparation of Water Samples for Flow Cytometric Analysis	812
III. Staining of Organisms from Water Samples for Flow Cytometric Analysis	815
IV. Flow Cytometric Analysis of Water Samples	822
V. Instrumentation Developments for Environmental Applications	829
VI. The Future of Flow Cytometry within Environmental Microbiology	831
References	832

38. Flow Cytometric Analysis of Microorganisms

J. Paul Robinson

I. Introduction	837
II. Experimental Approaches	840
III. Applications in Medical and Food Microbiology	852
IV. Conclusion	857
References	858

39. Flow Cytometry in Malaria Detection

Chris J. Janse and Philip H. Van Vianen

I. Introduction	866
II. Applications	867
III. Materials	870
IV. Cell Preparation and Staining	870
V. Critical Aspects of the Preparation and Staining Procedures	874
VI. Standards	874
VII. Instruments	875
VIII. Results and Discussion	876
IX. Comparison of Methods	885
References	887
