

CONTENTS

Preface	xiii
1. The Homeobox as a Key for Understanding the Principles of the Genetic Control of Development	1
<i>Walter J. Gehring</i>	
Introduction	1
Molecular Cloning of the Homeotic Bithorax-Complex in <i>Drosophila</i>	3
Molecular Cloning of Antennapedia Complex and the Discovery of the Homeobox	4
Specification and Redesigning of the Body Plan	5
The Structure and Function of the Homeodomain	8
Evolution of Homeobox Genes	10
2. Expression of <i>Hox</i> Genes in the Nervous System of Vertebrates	14
<i>Christof Nolte and Robb Krumlauf</i>	
Introduction	14
The <i>Hox</i> Gene Family	14
The Embryonic Vertebrate Nervous System	16
<i>Hox</i> Gene Expression in the CNS	19
Regulation of Neural Expression	23
Expression and Neuronal Phenotypes	29
The Roles of Auto- and Cross-Regulatory Interactions between <i>Hox</i> Genes	30
3. The <i>Hox</i> Gene Network in Vertebrate Limb Development	42
<i>Cheryll Tickle</i>	
Introduction to Vertebrate Limb Development	42
<i>Hox</i> Gene Expression in Vertebrate Limbs	43
Signals That Control <i>Hox</i> Gene Expression in the Limb	44
Tests of <i>Hox</i> Gene Function	46
Regulatory Regions That Drive <i>Hox</i> Gene Expression in the Limb	48
Wider Implications of the <i>Hox</i> Gene Network	49
4. Evolution of <i>Hox</i> Gene Clusters	53
<i>David E.K. Ferrier</i>	
Introduction	53
Origin of the Cluster: Unraveling Patterns of Gene Duplication and Duplicate Evolution	53
Evolution of Cluster Composition and the Impact of <i>Hox</i> on Animal Phylogeny	59
Molecular Mechanisms and Evolution of <i>Hox</i> Cluster Organization ...	62
Conclusion	65
5. Evolutionary Genomics of <i>Hox</i> Gene Clusters	68
<i>Sonja J. Prohaska, Peter F. Stadler and Günter P. Wagner</i>	
Introduction	68
Genomic Features	70

Chordate Hox Cluster History: How Little Do We Know?	76
The Effects of Duplication	81
Hypotheses and Inferences	86
6. Chromatin and the Control of Hox Gene Expression	91
<i>Laila Kobrossy and Mark Featherstone</i>	
Introduction	91
Anticipation	92
Initiation	93
Maintenance	95
Conclusions	97
7. Homeobox-Containing Genes in Limb Regeneration	102
<i>David M. Gardiner and Susan V. Bryant</i>	
Early Studies	103
Future Directions	106
8. Hox Genes and Stem Cells	111
<i>Mina Gouti and Anthony Gavalas</i>	
Introduction	111
Hox Genes and Drosophila Neuroblasts	111
Hox Gene Function in Stem Cells	
during Mammalian Development	112
Hox Genes and Hematopoietic Stem Cells	114
Hox Genes and Cancer Stem Cells	116
Conclusions	118
9. Dereglulation of the Hox Gene Network and Cancer	121
<i>Clemente Cillo</i>	
Introduction	121
Breast Cancer	123
Bladder Cancer	125
Prostate Cancer	125
Kidney Cancer	127
Conclusions	129
Appendix: Hypothesis: Pulling Forces Acting on Hox Gene	
Clusters Cause Expression Collinearity	134
<i>Spyros Papageorgiou</i>	
Introduction	134
A Physical Model for Hox Gene Collinearity	137
Attractive Electric Forces	138
Correlation of Morphogen Thresholds and Gene Translocations	140
Conclusions and Predictions	142
Index	147

The choice of italics or case for Hox is determined by the authors, preference and may differ between chapters.
