|-----------------------------------------------------------------------------|------------|
| <b>Preface</b> .....                                                        | <b>vii</b> |
| <b>Contributors</b> .....                                                   | <b>xxi</b> |
| <b>1. The Nature of Light and Its Interaction with Matter</b> .....         | <b>1</b>   |
| <i>Lars Olof Björn</i>                                                      |            |
| 1.1. Introduction .....                                                     | 1          |
| 1.2. Particle and Wave Properties of Light .....                            | 1          |
| 1.3. Light as Particles and Light as Waves, and Some Definitions....        | 6          |
| 1.4. Diffraction .....                                                      | 7          |
| 1.5. Polarization.....                                                      | 8          |
| 1.6. Statistics of Photon Emission and Absorption .....                     | 9          |
| 1.7. Heat Radiation.....                                                    | 11         |
| 1.8. Refraction of Light.....                                               | 14         |
| 1.9. Reflection of Light.....                                               | 15         |
| 1.10. Scattering of Light .....                                             | 18         |
| 1.11. Propagation of Light in Absorbing and Scattering Media.....           | 19         |
| 1.12. Spectra of Isolated Atoms.....                                        | 22         |
| 1.13. Energy Levels in Diatomic and Polyatomic Molecules.....               | 23         |
| 1.14. Quantum Yield of Fluorescence .....                                   | 29         |
| 1.15. Relationship Between Absorption and Emission Spectra.....             | 30         |
| 1.16. Molecular Geometry of the Absorption Process .....                    | 31         |
| 1.17. Transfer of Electronic Excitation Energy Between Molecules....        | 33         |
| 1.18. The Förster Mechanism for Energy Transfer.....                        | 34         |
| 1.19. Triplet States .....                                                  | 35         |
| 1.20. The Dioxygen Molecule.....                                            | 36         |
| 1.21. Singlet Oxygen .....                                                  | 37         |
| <b>2. Principles and Nomenclature for the Quantification of Light</b> ..... | <b>41</b>  |
| <i>Lars Olof Björn</i>                                                      |            |
| 2.1. Introduction: Why This Chapter Is Necessary .....                      | 41         |
| 2.2. The Wavelength Problem.....                                            | 42         |
| 2.3. The Problem of Direction and Shape .....                               | 43         |
| 2.4. Biological Weighting Functions and Units .....                         | 46         |

|                                                                                      |           |
|--------------------------------------------------------------------------------------|-----------|
| <b>3. Generation and Control of Light .....</b>                                      | <b>51</b> |
| <i>Lars Olof Björn</i>                                                               |           |
| 3.1. Introduction .....                                                              | 51        |
| 3.2. Light Sources.....                                                              | 51        |
| 3.2.1. The Sun .....                                                                 | 51        |
| 3.2.2. Incandescent Lamps.....                                                       | 52        |
| 3.2.3. Electric Discharges in Gases of Low Pressure .....                            | 53        |
| 3.2.4. Medium- and High-Pressure Gas Discharge Lamps.....                            | 54        |
| 3.2.5. Flashlamps .....                                                              | 55        |
| 3.2.6. Light-Emitting Diodes .....                                                   | 55        |
| 3.2.7. Lasers .....                                                                  | 56        |
| 3.3. Selection of Light.....                                                         | 57        |
| 3.3.1. Filters with Light-Absorbing Substances .....                                 | 58        |
| 3.3.2. Interference Filters .....                                                    | 61        |
| 3.3.3. Monochromators .....                                                          | 62        |
| <b>4. The Measurement of Light .....</b>                                             | <b>69</b> |
| <i>Lars Olof Björn</i>                                                               |           |
| 4.1. Introduction .....                                                              | 69        |
| 4.2. Photothermal Devices .....                                                      | 69        |
| 4.2.1. The Bolometer .....                                                           | 69        |
| 4.2.2. The Thermopile.....                                                           | 71        |
| 4.2.3. Thermopneumatic Devices .....                                                 | 72        |
| 4.3. Photoelectric Devices.....                                                      | 73        |
| 4.3.1. A Device Based on the Outer Photoelectric Effect:<br>The Photomultiplier..... | 73        |
| 4.3.2. Devices Based on Semiconductors (Inner<br>Photoelectric Effect).....          | 75        |
| 4.4. Photochemical Devices: Actinometers and Dosimeters .....                        | 76        |
| 4.5. Fluorescent Wavelength Converters ("Quantum Counters") .....                    | 79        |
| 4.6. Spectroradiometry .....                                                         | 80        |
| 4.6.1. General .....                                                                 | 80        |
| 4.6.2. Input Optics.....                                                             | 80        |
| 4.6.3. Example of a Spectroradiometer .....                                          | 82        |
| 4.6.4. Calibration of Spectroradiometers.....                                        | 84        |
| 4.7. Special Methods for Measurement of Very Weak Light.....                         | 87        |
| 4.7.1. Introduction .....                                                            | 87        |
| 4.7.2. Direct Current Mode.....                                                      | 87        |
| 4.7.3. Chopping of Light and Use of Lock-In Amplifier .....                          | 88        |
| 4.7.4. Measurement of Shot Noise .....                                               | 88        |
| 4.7.5. Pulse Counting .....                                                          | 88        |
| 4.8. A Sensor for Catching Images: The Charge-Coupled Device.....                    | 89        |
| <b>5. Light as a Tool for Biologists: Recent Developments .....</b>                  | <b>93</b> |
| <i>Lars Olof Björn</i>                                                               |           |
| 5.1. Introduction .....                                                              | 93        |

|           |                                                                                                                         |            |
