

Contents

	Preface	1
Part one	Science, technology and values	
One	Introduction M. H. F. Wilkins	5
Two	On the logical relationship between knowledge and values Jacques Monod	11
Three	Fragmentation in science and in society David Bohm	22
Part Two	Molecular genetics	
Four	Molecular genetics: an introductory background W. Hayes	39
Five	Molecular genetics: short-term applications and long-term possibilities M. R. Pollock	60
Part three	Human genetics and reproduction	
Six	Social effects of research in human genetics Geoffrey Beale	84

vi Contents

Seven	Ethics and eugenics L. S. Penrose	94
Eight	The obstetrician and genetic investigation D. V. I. Fairweather	102
Nine	Aspects of human reproduction R. G. Edwards	108
Part four	Immunology and cancer	
Ten	Some implications of modern immunology J. H. Humphrey	122
Eleven	Molecular biological approach to the cancer problem J. D. Watson	140
Part five	Agricultural botany and the environment	
Twelve	Molecular biology and agricultural botany Arthur W. Galston	154
Thirteen	Environmental problems and the reunification of the scientific community Joseph G. Hancock	167
Part six	Science in society	
Fourteen	The role of industry in applied science A. J. Hale	175
Fifteen	Science and social values Martin M. Kaplan	192
Sixteen	Evolutionary biology and ideology: Then and now Robert M. Young	199

Seventeen	The myth of the neutrality of science	215
	Steven Rose and Hilary Rose	
Eighteen	The scientist in opposition in the United States	225
	Jon Beckwith	
Nineteen	The disestablishment of science	233
	J. Bronowski	
Twenty	Possible ways to rebuild science	247
	M. H. F. Wilkins	
	Contributors to the discussion	255
