

CONTENTS

Foreword	xiii
Contributors	xv
1 Overview of Mass Spectrometry Technologies for Examining Protein Structure: Current and Future Directions	1
<i>Shannon M. Swiatkowski and Mark R. Chance</i>	
1.1 Introduction	1
1.2 Hydrogen/Deuterium Exchange Mass Spectrometry	3
1.3 Hydroxyl-Radical-Mediated Protein Footprinting	5
1.4 Chemical Cross-linking	8
References	8
2 Hydrogen Exchange Mass Spectrometry: Principles and Capabilities	11
<i>Sébastien Brier and John R. Engen</i>	
2.1 The Chemistry of Hydrogen Exchange	11
2.1.1 Principles of Proton Transfer	11
2.1.2 Mechanisms of Backbone Amide Hydrogen Exchange	14
2.1.3 Factors Affecting Hydrogen Exchange	15
2.2 HX Mechanisms in Proteins	19
2.3 Deuterium Incorporation into Proteins	23
2.3.1 Continuous Labeling	23
2.3.2 Pulse Labeling	25
2.3.3 Other Labeling Strategies	26
2.4 Measuring HX with Mass Spectrometry	26
2.4.1 Global Versus Local Exchange	27
2.4.2 Back Exchange	27
2.4.3 Proteolysis Before MS	28
2.4.4 Mass Measurements and Data Processing	29
2.5 Capabilities of HX MS in Structural Biology	31
2.5.1 Protein Folding Studies	32
2.5.2 Quality Control	32
2.5.3 Aid in Structure Elucidation	34
2.5.4 Interactions and Dynamics	35

Acknowledgment	36
References	36
3 Covalent Labeling Methods for Examining Protein Structure and Protein Interactions	45
<i>Keiji Takamoto and Janna Kiselar</i>	
3.1 Introduction	45
3.2 Chemistry of Hydroxyl Radical Footprinting	46
3.2.1 Generation of Hydroxyl Radicals	47
3.2.2 Reactions of Hydroxyl Radical Products: Nature of Amino Acid Modifications	48
3.2.3 Relative Reactivity of Amino Acid Side Chains	49
3.2.4 Principles of Hydroxyl Footprinting and Protein Integrity During Radiolysis	50
3.3 Mass Spectrometry Approaches for Quantitative Protein Footprinting	52
3.3.1 Quantification of Peptide Oxidation Using LC-MS	52
3.3.2 Confirmation of Peptide Identity and Determination of Modification Sites by MS/MS	54
3.4 Examples of Various Methods that Generate Hydroxyl Radicals in Solution to Examine Protein Structure	55
3.4.1 Radiolytic Footprinting of Cytochrome <i>c</i>	55
3.4.2 Fenton Hydroxyl Radical Footprinting	56
3.4.3 Laser Photolysis of H ₂ O ₂	57
3.4.4 Radiolysis by High-Voltage Electric Discharge Within ESI Ion Source	57
3.4.5 Synchrotron X-Ray Footprinting for Protein Complexes and Assembly Studies: Probing Arp2/3 Complex Activation by ATP and WASp Binding Proteins	58
3.5 The Future: Hybrid Approaches that Combine Experimental and Computational Data	62
References	63
4 Complementary Methods for Structure Determination: Hydroxyl-Radical-Mediated Footprinting and Deuterium Exchange Mass Spectrometry as Applied to Serpin Structure	69
<i>Xiaojing Zheng and Patrick L. Wintrobe</i>	
4.1 Introduction	69
4.2 Technical Comparison of Hydroxyl-Radical-Mediated Footprinting and H/D Exchange Methodologies	73
4.3 Structural Mass Spectrometry Data	76
4.3.1 H/D Exchange Data	76
4.3.2 Synchrotron Footprinting Data	76

4.4 Solvent Accessibility	79
4.5 Dynamics	84
4.6 Significance for Serpin Structure and Function	87
4.7 Summary	87
Acknowledgment	88
References	88
5 Deuterium Exchange Approaches for Examining Protein Interactions: Case Studies of Complex Formation	91
<i>Elizabeth A. Komives</i>	
5.1 Interactions of Regulatory and Catalytic Subunits of Protein Kinase A	91
5.1.1 Interaction of the Catalytic Subunit with a Pseudosubstrate	92
5.1.2 Interaction of the Catalytic Domain with the RI α Regulatory Domain	92
5.1.3 Combination Of H/D Exchange Data and Computational Docking	93
5.2 Allostery in Protein-Protein Interactions Revealed by H/D Exchange	95
5.2.1 Allostery within the Regulatory Subunit Revealed by H/D Exchange	95
5.2.2 Allostery in the Thrombin-Thrombomodulin Interaction	97
5.3 Interactions of the Inhibitor I κ B α with the Transcription Factor NF- κ B	97
5.3.1 H/D Exchange of I κ B α Reveals Partially Unfolded Regions	98
5.3.2 H/D Exchange Reveals I κ B α Folds upon Binding to NF- κ B	98
References	101
6 Hydrogen/Deuterium Exchange Studies of Viruses	105
<i>Sebyung Kang and Peter E. Prevelige Jr.</i>	
6.1 Overview of Virus Lifecycles	105
6.2 Structural Investigations of Viral Capsids	105
6.3 Dynamics of Viral Capsids	106
6.4 Hydrogen/Deuterium Exchange Studies of Virus Capsid Structure	107
6.4.1 Bacteriophage P22	107
6.4.2 HIV	109
6.4.3 Brome Mosaic Virus	113
6.5 Hydrogen/Deuterium Exchange Studies of Viral Protein Dynamics	114
6.5.1 Bacteriophage Phi-29 Scaffolding Protein	114
6.5.2 Packaging Motor P4 from dsRNA Bacteriophages Phi-8 and Phi-12	117

6.6	Technical Aspects of Performing Hydrogen/Deuterium Exchange Experiments on Viruses	118
6.6.1	Dissociation of Structures	118
6.6.2	Presence of Nucleic Acid	118
6.6.3	Potential for Strain Variation	119
6.6.4	Presence of BSA	119
6.6.5	Complexity and Size	119
	References	119
7	Use of Enhanced Peptide Amide Hydrogen/Deuterium Exchange-Mass Spectrometry (DXMS) in the Examination of Protein-Protein Interactions	123
	<i>Yoshitomo Hamuro, Stephen J. Coales, Lora L. Hamuro, and Virgil L. Woods Jr.</i>	
7.1	Introduction	123
7.2	Theory of H/D Exchange	124
7.2.1	Amide H/D Exchange	124
7.2.2	Protection Factor	125
7.2.3	Backbone Amide Hydrogens as Thermodynamic Sensors	125
7.2.4	H/D Exchange for Protein-Protein Interactions	126
7.3	Overview of DXMS Technology for Protein-Protein Interactions	126
7.3.1	On-Exchange Reaction	126
7.3.2	Quench of Exchange Reaction	127
7.3.3	Protein Fragmentation by Proteolysis	127
7.3.4	HPLC Separation	128
7.3.5	Mass Analysis	128
7.3.6	DXMS of a Protein with or without Protein Binding Partner	128
7.4	DXMS of Human Growth Hormone and Its Binding Protein	129
7.4.1	Human Growth Hormone High Affinity Variant	129
7.4.2	DXMS Experiments of Human Growth Hormone and Its Binding Protein	130
7.4.3	DXMS of hGHwt and hGHv without hGHbp	131
7.4.4	DXMS of hGHwt and hGHv with hGHbp	131
7.4.5	DXMS of hGHbp with or without hGH	132
7.4.6	Enhanced Affinity by Increasing the Free Energy of the Unbound State	133
7.5	DXMS of PKA Regulatory Subunits	133
7.5.1	Protein Kinase A (PKA) Regulatory Subunits	133
7.5.2	DXMS Experiments of PKA Regulatory Subunits	134
7.5.3	DXMS of cAMP-Bound PKA R-Subunits	134
7.5.4	Interaction between R-Subunits and C-Subunit	136
7.5.5	Interaction between R-Subunits and cAMP	138
7.5.6	Lack of Significant Effects on the D/D Domain upon Binding to cAMP or C-Subunit	139

7.6	DXMS of PKA R-Subunit D/D Domains and D-AKAP2 AKB Domain	139
7.6.1	PKA R-Subunit D/D Domains and D-AKAP2 AKB Domain	139
7.6.2	DXMS Experiments of PKA R-Subunit D/D Domains and D-AKAP2 AKB Domain	140
7.6.3	DXMS of D-AKAP2 AKB Domain with or without PKA R-Subunit D/D Domains	141
7.6.4	DXMS of PKA R-Subunit D/D Domains with or without D-AKAP2 AKB Domain	143
7.7	Epitope Mapping by DXMS	146
7.7.1	Epitope Mapping	146
7.7.2	DXMS Experiments of Cytochrome <i>c</i> in the Presence and Absence of Antibody	147
7.7.3	Antibody Binding Site on Cytochrome <i>c</i> by DXMS	147
7.7.4	Comparison with X-ray Crystallographic Structure	147
7.8	Conclusions	148
	Abbreviations	149
	Acknowledgments	150

9.1	Introduction	169
9.2	Mapping Cross-linking with Methods Other than Mass Spectrometry	171

12.3.4 Applications in Biologically Relevant Media	250
12.3.5 The Interaction of Holo-CaM and Peptides	251
12.4 Self-Association of Insulin: A Protein/Protein Interaction	253
12.5 Features of PLIMSTEX	254
12.6 Fast Photochemical Oxidation of Proteins: An Example of Fast Protein Footprinting	256
12.6.1 Hydroxyl Radicals as a Probe	256
12.6.2 Fast Hydroxyl-Radical Footprinting	258
12.6.3 Locating the Sites of Radical Reaction	258
12.6.4 Application of FPOP to Apomyoglobin	259
12.7 Features of FPOP	263
12.8 Future	264
