Preface	xi
Foreword	xii
1 Chemical messengers and the cell membrane	1
1.1 Endocrine signalling by hormones	1
1.2 The nervous system and synaptic signalling by neurotransmitters	8
Small molecule neurotransmitters	11
Neuropeptides	13
1.3 Paracrine signalling by local chemical messengers	15
1.4 Hydrophobicity: effect on release and transport of messengers	16
1.5 Membrane proteins and membrane receptors	23
1.6 Ligand–receptor interactions	25
2 Radioligand binding studies	29
2.1 Technical aspects of radioligand binding	29
2.2 Saturation binding	33
2.3 Competition binding	38
2.4 Kinetic experiments	46
2.5 Regional distribution of receptors	50
3 Functional studies	53
3.1 Dose–response curves and associated problems	53
3.2 From receptor occupation to stimulus and response	56
From receptor occupation to stimulus	56
From stimulus to response: linear relationship	59
From stimulus to response: non-linear relationship	61
3.3 Receptor classification and antagonist affinity	65
3.4 Pharmacological models	69
4 G protein-coupled receptors	77
4.1 From receptor to response: introduction to GPCRs	77
4.2 GPCR structure	86
4.3 Ligand interactions with family A, B and C receptors	97
Ligand interaction with family A receptors	98

Ligand interaction with family B receptors	102
Ligand interaction with family C receptors	104
4.4 Receptor activation	106
4.5 Activated GPCRs: interaction with G proteins	113
Techniques to study G protein-coupling preference	119
Divergence of intracellular signalling	123
4.6 Activated GPCRs: phosphorylation and internalization	125
Receptor phosphorylation	125
β -Arrestin binding mediated GPCR endocytosis	129
Mechanisms to terminate signalling	134
4.7 β -Arrestin-binding and MAP kinase activation	137
4.8 GPCR dimerization and association with other proteins	142
Introductory comments	142
GPCR dimerization	143
GPCR interaction with other membrane receptors	151
GPCR interaction with other membrane proteins	152
GPCR interactions with cytoplasmic proteins	156
4.9 Early models for GPCR activation	159
4.10 Restricted GPCR mobility and G protein coupling	163
Membrane compartmentalization	163
Restricted GPCR-G protein coupling: effector activity	173
4.11 Spontaneous receptor-G protein coupling	175
Models	175
Inverse agonism	179
4.12 Interaction of two G proteins with one activated receptor state	183
Fusion proteins between GPCRs and G proteins	185
4.13 Multiple receptor conformations	191
'Agonist trafficking': what do models predict?	196
Experimental 'evidence' for agonist trafficking: potential pitfalls	198
Multistate receptors: ligand-mediated sequential changes in receptor conformation	201
Multiple receptor states related to truncation, covalent modification and mutation	204
4.14 Multistate receptors and multiple ligand binding sites	207
The general allosteric ternary complex model	210
Exogenous and endogenous allosteric modulators	212
allosteric phenomena at GPCR: detection by radioligand binding	214
Detection of allosteric phenomena at GPCRs by functional assays	219
Usefulness of allosteric modulators	222
4.15 'Competitive', 'non-competitive' and 'insurmountable' antagonism	222
Co-incubation, no receptor reserve	222
Antagonist pre-incubation, no receptor reserve	224
4.16 Naturally occurring mutations of GPCRs	226
5 Concluding remarks	231
References	235
Index	244
