

CONTENTS

<i>Preface</i>	<i>page</i>	vii
1 GENERAL ANATOMY OF THE WINGS AND OF A WING-BEARING SEGMENT		I
2 THE FORM AND MECHANISM OF THE WING BEAT Kinematics. Action of the indirect muscles: Diptera; Hymenoptera. Relative motion of the fore and hind wings: Odonata. Hemiptera. Coleoptera. Other orders.		7
3 THE HISTOLOGY, PHYSIOLOGY AND BIOCHEMISTRY OF FLIGHT MUSCLE Histology: distribution of muscle types; striation. Bio- chemistry. Physiology: leg muscles; non-fibrillar flight muscle; fibrillar muscle; the evolution of fibrillar muscle.		33
4 AERODYNAMICS Principles; history; locust flight; flight of very small insects; power; conclusion.		67
5 NERVOUS AND SENSORY MECHANISMS Anatomy; motor nerve fibres; sense organs in the wings; other sense organs; reflexes and central nervous mechanisms; initiation and maintenance; co-ordination; lift; frequency; stroke amplitude and position; the halteres of Diptera; the head as an organ of balance; innate patterns of co-ordination; summary of regulatory systems in insect flight.		86
