Introduction 1

PATRICK DUNCAN, KJELL DANELL,
ROGER BERGSTRÖM AND JOHN PASTOR

1 Large herbivores across biomes 19

HERVÉ FRITZ AND ANNE LOISON

Introduction	19
Definitions of biogeographical and behavioural categories	21
Taxonomic diversity	22
Palaeontology	25
Body size, diversity and distribution	27
Group sizes and feeding types	33
The diversity of mating systems across continents and biomes	37
The occurrence of sexual dimorphism	38
Variations in demographic strategies	40
Conclusions	42
Acknowledgements	44
References	44

2 Living in a seasonal environment 50

JON MOEN, REIDAR ANDERSEN AND ANDREW ILLIUS

Introduction	50
Effects of seasonality on large herbivore life history tactics	51
Energy use in arctic/alpine large herbivores – capital vs. income breeder strategies	52
Effects of climatic variability on population dynamics	55

Effects of seasonality on impact of grazing	61
Effects of global climate change on large herbivore-plant interactions	63
Conclusions	65
Acknowledgements	65
References	65
3 Linking functional responses and foraging behaviour to population dynamics	71
ANDREW W. ILLIUS	
Introduction	71
Recent models of functional response	71
Implications of new models of functional responses for foraging and diet optimization	77
Describing the numerical response	82
Diet selection, resource heterogeneity and large herbivore population dynamics	84
Stabilizing and destabilizing influences on large herbivore population dynamics	89
Conclusions	92
Acknowledgements	93
References	93
4 Impacts of large herbivores on plant community structure and dynamics	97
ALISON J. HESTER, MARGARETA BERGMAN, GLENN R. IASON AND JON MOEN	
Introduction	97
How do large herbivores directly affect individual plants?	98
How do plants avoid or respond to large herbivore impacts?	104
Implications for plant community structure and diversity	111
Conclusions	127
Acknowledgements	128
References	128
5 Long-term effects of herbivory on plant diversity and functional types in arid ecosystems	142
DAVID WARD	
Introduction	142

Long-term studies of effects of large mammals on arid vegetation	145
Oscillations of vegetation and herbivore populations	149
Effects of herbivory on relationships among plant functional types	150
Conclusions	163
Acknowledgements	164
References	164
6 The influence of large herbivores on tree recruitment and forest dynamics	170
ROBIN GILL	
Introduction	170
Large herbivore diets	171
Plant defences	173
Effects of browsers on tree growth and survival	175
Effects of browsers on tree regeneration	179
Indirect effects of large herbivores	183
Changes in tree species composition	185
Temporal and spatial variations in herbivore densities	188
Conclusions	191
Acknowledgements	193
References	193
7 Large herbivores: missing partners of western European light-demanding tree and shrub species?	203
FRANS W.M. VERA, ELISABETH S. BAKKER AND HAN OLFF	
Introduction	203
The disappearance of light-demanding tree and shrub species	204
Oak and hazel in forest reserves	205
Competition for light in a closed canopy-forest	206
Regeneration of oak and hazel in wood-pastures	208
The jay and the oak	211
The formation of a park-like landscape	212
Processes in the wood-pasture as modern analogues of former relations?	214
Other lines of evidence	215
Preserving biodiversity	217

Summing up the viewpoints	217
The theory in a broader perspective	218
Acknowledgements	222
References	222
8 Frugivory in large mammalian herbivores	232
RICHARD BODMER AND DAVID WARD	
Introduction	232
Frugivores and the evolution of herbivory in mammals	233
Frugivory and large herbivores of the tropics	234
Seed dispersal and seed predation	241
Case studies on frugivory and seed dispersal from extreme habitats	242
Implications for conservation	253
Conclusions	255
Acknowledgements	256
References	256
9 Large herbivores as sources of disturbance in ecosystems	261
N. THOMPSON HOBBS	
Introduction	261
What is disturbance?	262
Physical disturbance: trampling	264
Physical disturbance: wallows	270
Additions of dung, urine and carcasses	270
Interactions of large herbivores with other sources of disturbance	275
Conclusions	279
Acknowledgements	281
References	282
10 The roles of large herbivores in ecosystem nutrient cycles	289
JOHN PASTOR, YOSEF COHEN AND N. THOMPSON HOBBS	
Introduction	289
The Serengeti: increased nutrient cycling in a grazing ecosystem	293
The moose in the boreal forest: decreased nutrient cycling in a browsing system	297

Reindeer in tundra: mixed effects on nutrient cycling	301
When is nutrient cycling and productivity enhanced and when is it decreased?	302
Implications for evolution	310
Implications for conservation of large herbivores	314
Conclusions	317
Acknowledgements	318
References	318
11 Large herbivores in heterogeneous grassland ecosystems	326
DOUGLAS A. FRANK	
Introduction	326
Regional heterogeneity	328
Landscape heterogeneity	333
Heterogeneity within a plant community	335
Effects of herbivores on heterogeneity and associated feedbacks	341
Conclusions	342
Acknowledgements	343
References	343
12 Modelling of large herbivore-vegetation interactions in a landscape context	348
PETER J. WEISBERG, MICHAEL B. COUGHENOUR AND HARALD BUGMANN	
Introduction	348
Modelling approaches	349
Challenges of integrated large herbivore-vegetation models in a landscape context	359
Approaches for modelling across scales	368
Models for management and conservation	374
Conclusions	375
Acknowledgements	377
References	377
13 Effects of large herbivores on other fauna	383
OTSO SUOMINEN AND KJELL DANELL	
Introduction	383
Methodological issues	384

	The potential mechanisms how large herbivores can affect other biota	385
	Impacts on vertebrates	387
	Impacts on invertebrates	392
	Conclusions	403
	Acknowledgements	406
	References	407
14	The future role of large carnivores in terrestrial trophic interactions: the northern temperate view	413
	REIDAR ANDERSEN, JOHN D.C. LINNELL AND ERLING J. SOLBERG	
	Introduction	413
	What runs the world – little things or big things?	414
	Dramatis personae	416
	Predator-prey interactions	418
	The Predation Model: Can large carnivores keep down populations of large herbivores?	420
	Can large carnivores drive large herbivores to local extinction?	424
	The Predation–Food Model (two-stage): Do predator pits exist?	426
	Can we expect stability in predator-prey systems?	429
	Behavioural aspects	431
	Community effects	434
	Humans are the main keystone	437
	Conclusions	439
	Acknowledgements	441
	References	441
15	Restoring the functions of grazed ecosystems	449
	IAIN J. GORDON	
	Introduction	449
	How do we define a healthy ecosystem?	451
	Degradation in grazed ecosystems	451
	The role of herbivores in ecosystem function	452
	Restoring ecosystem function	455
	Involving people in managing for restoration	460
	Conclusions	462
	Acknowledgements	464
	References	465

16 Themes and future directions in herbivore-ecosystem interactions and conservation	468
JOHN PASTOR, KJELL DANELL, ROGER BERGSTRÖM AND PATRICK DUNCAN	
Theme 1: The importance of body size	469
Theme 2: Tissue chemistry	470
Theme 3: Physiological responses of plants to herbivores	472
Theme 4: Changes in plant communities and ecosystem properties	473
Conclusions	476
References	477
