

Brief Contents

PART 1 FOUNDATIONS OF MICROBIOLOGY 2

- 1** Microbiology: Then and Now 5
- 2** The Chemical Building Blocks of Life . 40
- 3** Concepts and Tools for Studying Microorganisms 69

PART 2 THE BACTERIA AND ARCHAEA 102

- 4** Prokaryotic Cell Structure and Function. 105
- 5** Prokaryotic Growth and Nutrition . . 137
- 6** Metabolism of Prokaryotic Cells . . 161
- 7** Prokaryotic Genetics 190
- 8** Gene Transfer, Genetic Engineering, and Genomics. 220

PART 3 BACTERIAL DISEASES OF HUMANS 252

- 9** Airborne Bacterial Diseases 255
- 10** Foodborne and Waterborne Bacterial Diseases. 280
- 11** Soilborne and Arthropodborne Bacterial Diseases. 308
- 12** Sexually Transmitted, Contact, and Miscellaneous Bacterial Diseases. . 333

PART 4 VIRUSES AND EUKARYOTIC MICROORGANISMS 366

- 13** The Viruses and Virus-like Agents. . 369
- 14** Viral Infections of the Respiratory Tract and Skin. 408
- 15** Viral Infections of the Blood, Lymphatic, Gastrointestinal, and Nervous Systems 440
- 16** Eukaryotic Microorganisms: The Fungi 476

- 17** Eukaryotic Microorganisms: The Parasites 506

PART 5 DISEASE AND RESISTANCE 544

- 18** Infection and Disease 547
- 19** Resistance and the Immune System: Innate Immunity. 580
- 20** Resistance and the Immune System: Acquired Immunity. 601
- 21** Immunity and Serology 628
- 22** Immune Disorders. 661

PART 6 CONTROL OF MICROORGANISMS 692

- 23** Physical and Chemical Control of Microorganisms 695
- 24** Antimicrobial Drugs 726

PART 7 MICROBIOLOGY AND PUBLIC HEALTH . . . 758

- 25** Microbiology of Foods. 761
- 26** Environmental Microbiology 789
- 27** Industrial Microbiology and Biotechnology 814

To the Student—Study Smart.	xxii

PART 1 FOUNDATIONS OF MICROBIOLOGY 2

1 Microbiology: Then and Now 5

- 1.1 The Beginnings of Microbiology 8
 - Microscopy—Discovery of the Very Small 8
 - Experimentation—Can Life Generate Itself Spontaneously? 10
- 1.2 Microorganisms and Disease Transmission 14
 - Epidemiology—Understanding Disease Transmission 15
 - Variolation and Vaccination—Prevention of Infectious Disease 16
 - The Stage Is Set 18
- 1.3 The Classical Golden Age of Microbiology (1854–1914) 19
 - Louis Pasteur Proposes That Germs Cause Infectious Disease 19
 - Pasteur's Work Stimulates Disease Control and Reinforces Disease Causation 20
 - Robert Koch Formalizes Standards to Identify Germs with Infectious Disease 22
 - Competition Fuels the Study of Infectious Disease 23

- Other Global Pioneers Contribute to New Disciplines in Microbiology 25
- 1.4 Studying Microorganisms 27
 - Why Study Microorganisms and Viruses Today? 27
 - The Spectrum of Microorganisms Is Diverse 28
- 1.5 The Second Golden Age of Microbiology (1943–1970) 30
 - Molecular Biology Relies on Microorganisms 30
 - Two Types of Cellular Organization Are Realized 30
 - Antibiotics Are Used to Cure Infectious Disease 31
- 1.6 The Third Golden Age of Microbiology—Now 33
 - Microbiology Continues to Face Many Challenges 33
 - Microbial Ecology and Evolution Are Helping to Drive the New Golden Age 35
 - Chapter Review 37

2 The Chemical Building Blocks of Life 40

- 2.1 The Elements of Life 42
 - Matter Is Composed of Atoms 42
 - Atoms Can Vary in the Number of Neutrons or Electrons 43
 - Electron Placement Determines Chemical Reactivity 44
- 2.2 Chemical Bonding 45
 - Ionic Bonds Form between Oppositely Charged Ions 45
 - Covalent Bonds Share Electrons 45
 - Hydrogen Bonds Form between Polar Groups or Molecules 48
 - Chemical Reactions Change Bonding Partners 48
- 2.3 Water, pH, and Buffers 49
 - Water Has Several Unique Properties 49
 - Acids and Bases Must Be Balanced in Cells 50
 - Buffers Are a Combination of a Weak Acid and Base 52

Courtesy of the CDC.

- 2.4 Major Organic Compounds of Living Organisms** 52
 Functional Groups Define Molecular Behavior 52
 Carbohydrates Consist of Sugars and Sugar Polymers 53
 Lipids Are Water-Insoluble Compounds 55
 Nucleic Acids Are Large, Information-Containing Polymers 56
 Proteins Are the Workhorse Polymers in Cells 59
 Chapter Review 65

3 Concepts and Tools for Studying Microorganisms 69

- 3.1 The Prokaryotic/Eukaryotic Paradigm** 71
 Prokaryotic/Eukaryotic Similarities 71
 Prokaryotes and Eukaryotes: The Similarities in Organizational Patterns 74
 Prokaryotes and Eukaryotes: The Structural Distinctions 76

3.2 Cataloging Microorganisms 77

- Classification Attempts to Catalog Organisms 77
 Nomenclature Gives Scientific Names to Organisms 80
 Classification Uses a Hierarchical System 81
 Kingdoms and Domains: Trying to Make Sense of Taxonomic Relationships 81
 The Three-Domain System Places the Prokaryotes in Separate Lineages 82
 Distinguishing between Prokaryotes 83

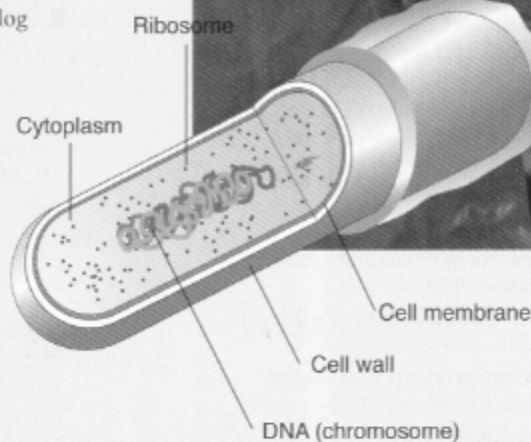

3.3 Microscopy 86

- Most Microorganisms Are in the Micrometer Size Range 86
 Light Microscopy Is Used to Observe Most Microorganisms 86
 Staining Techniques Provide Contrast 88
 Light Microscopy Has Other Optical Configurations 93
 Electron Microscopy Provides Detailed Images of Cells, Cell Parts, and Viruses 94
 Chapter Review 97

PART 2 THE BACTERIA AND ARCHAEA 102

4 Prokaryotic Cell Structure and Function 105

4.1 Prokaryotic Diversity 106

- The Domain *Bacteria* Contains Some of the Best Studied Prokaryotes 106
 The Domain *Archaea* Contains Many Extremophiles 108

4.2 The Shapes and Arrangements of Prokaryotic Cells 110 Prokaryotes Vary in Cell Shape and Cell Arrangement 110

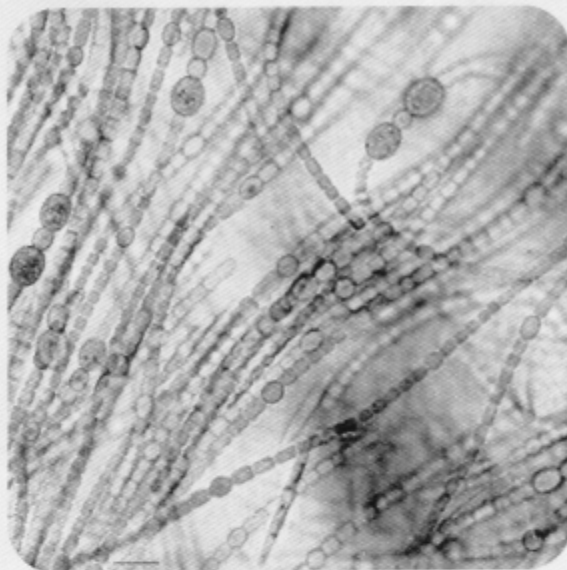

4.3 An Overview to Prokaryotic Cell Structure 112

4.4 External Prokaryotic Cell Structures 114

- Pili Are Protein Fibers Extending from the Surface of Many Prokaryotes 114
 Prokaryotic Flagella Are Long Appendages Extending from the Cell Surface 116
 The Glycocalyx Is an Outer Layer External to the Cell Wall 118

© Photodisc

Courtesy of Roger Burks (University of California at Riverside), Mark Schneegurt (Wichita State University), and Cyanosite (www.cyanosite.bio.purdue.edu).

- 4.5 The Cell Envelope 120**
 - The Prokaryotic Cell Wall Is a Tough and Protective External Shell 120
 - The Archaeal Cell Wall Also Provides Mechanical Strength 122
 - The Cell Membrane Represents the Interface between the Cell Environment and the Cell Cytoplasm 124
 - The Archaeal Cell Membrane Differs from Bacterial and Eukaryal Membranes 125
- 4.6 The Cell Cytoplasm and Internal Structures 126**
 - The Nucleoid Represents a Subcompartment Containing the Chromosome 126
 - Plasmids Are Found in Many Prokaryotic Cells 126
 - Other Subcompartments Exist in the Prokaryotic Cytoplasm 127
 - Prokaryotic Cells Have a "Cytoskeleton" 127
- 4.7 The Prokaryotic/Eukaryotic Cell—Revisited 128**
 - Chapter Review 132

5 Prokaryotic Growth and Nutrition . . 137

- 5.1 Prokaryotic Reproduction 139**
 - Most Prokaryotes Reproduce by Binary Fission 139
 - Prokaryotes Reproduce Asexually 140
- 5.2 Prokaryotic Growth 142**
 - A Bacterial Growth Curve Illustrates the Dynamics of Growth 142
 - Endospores Are a Response to Nutrient Limitation 143
 - Optimal Prokaryotic Growth Is Dependent on Several Physical Factors 147

- 5.3 Culture Media and Growth Measurements 151**
 - Culture Media Are of Two Types 151
 - Culture Media Can Be Devised to Select for or Differentiate between Prokaryotic Species 153
 - Population Measurements Are Made Using Pure Cultures 156
 - Population Growth Can Be Measured in Several Ways 156
 - Chapter Review 158

6 Metabolism of Prokaryotic Cells . . 161

- 6.1 Enzymes and Energy in Metabolism 163**
 - Enzymes Catalyze All Cellular Reactions 163
 - Enzymes Act through Enzyme-Substrate Complexes 154
 - Enzymes Often Team Up in Metabolic Pathways 166
 - Enzyme Activity Is Regulated and Can Be Inhibited 166
 - Energy in the Form of ATP Is Required for Metabolism 167
- 6.2 The Catabolism of Glucose 169**
 - Glucose Contains Stored Energy That Can Be Extracted 169
 - Cellular Respiration Is a Series of Catabolic Pathways for the Production of ATP 170
 - Glycolysis Is the First Stage of Energy Extraction 170
 - The Krebs Cycle Extracts More Energy from Pyruvate 170
 - Oxidative Phosphorylation Is the Process by Which Most ATP Molecules Form 174
- 6.3 Other Aspects of Catabolism 178**
 - Other Nutrients Represent Potential Energy Sources 178
 - Anaerobic Respiration Produces ATP Using Other Final Electron Acceptors 179
 - Fermentation Produces ATP Using an Organic Final Electron Acceptor 180
- 6.4 The Anabolism of Carbohydrates 182**
 - Photosynthesis Is a Process to Acquire Chemical Energy 182
- 6.5 Patterns of Metabolism 185**
 - Autotrophs and Heterotrophs Get Their Energy and Carbon in Different Ways 185
 - Chapter Review 187

7 Prokaryotic Genetics 190

- 7.1 Prokaryotic DNA 192**
 - Prokaryotic DNA Is Organized within the Nucleoid 193
 - DNA within a Chromosome Is Highly Compacted 193

Many Prokaryotic Cells also Contain Plasmids 193

7.2 DNA Replication 194

DNA Replication Is a Highly Regulated Process 195

7.3 Protein Synthesis 195

The Central Dogma Identifies the Flow of Genetic Information 197

Transcription Copies Genetic Information into RNA 197

The Genetic Code Is Degenerate 199

Translation Is the Process of Making the Polypeptide 200

Antibiotics Interfere with Protein Synthesis 203

Protein Synthesis Can Be Controlled in Several Ways 203

Transcription and Translation Are Compartmentalized 204

7.4 Mutations 207

Mutations Are the Result of Natural Processes or Induced 207

Point Mutations Are a Result of Spontaneous or Induced Mutations 207

Repair Mechanisms Attempt to Correct Mistakes or Damage in the DNA 209

Transposable Genetic Elements Can Cause Mutations 211

7.5 Identifying Mutants 213

Plating Techniques Select for Specific Mutants of Characteristics 213

The Ames Test Can Identify Potential Mutagens 215

Chapter Review 217

8 Gene Transfer, Genetic Engineering, and Genomics 220

8.1 Genetic Recombination in Prokaryotes 222

Genetic Information in Prokaryotes Can Be Transferred Vertically and Horizontally 222

Transformation Is the Uptake and Expression of DNA in a Recipient Cell 223

Conjugation Involves Cell-to-Cell Contact for Horizontal Gene Transfer 226

Conjugation Can also Transfer Chromosomal DNA 227

Transduction Involves Viruses as Agents for Horizontal Transfer of DNA 229

8.2 Genetic Engineering and Biotechnology 233

Genetic Engineering Was Born from Genetic Recombination 233

Genetic Engineering Has Many Commercial and Practical Applications 235

8.3 Microbial Genomics 243

Many Microbial Genomes Have Been Sequenced 243

Segments of the Human Genome May Have "Microbial Ancestors" 243

Microbial Genomics Will Advance Our Understanding of the Microbial World 245

Comparative Genomics Brings a New Perspective to Defining Infectious Diseases and Studying Evolution 247

Chapter Review 249

PART 3 BACTERIAL DISEASES OF HUMANS 252

9 Airborne Bacterial Diseases 255

9.1 Diseases of the Upper Respiratory Tract 256

Streptococcal Diseases Can Be Mild to Severe 256

Diphtheria Is a Life-Threatening Illness 259

Pertussis (Whooping Cough) Is Highly Contagious 260

Bacterial Meningitis Can Be Life Threatening 261

9.2 Diseases of the Lower Respiratory Tract 264

Tuberculosis Is a Major Cause of Death Worldwide 264

"Typical" Pneumonia Can Be Caused by Several Bacteria 268

"Atypical" Pneumonia Can Be Caused by a Diverse Group of Bacterial Species 269

Some Rickettsiae and Chlamydiae Also Cause Pneumonia 272

Chapter Review 277

Courtesy of Don Howard/CDC.

10 Foodborne and Waterborne Bacterial Diseases 280

10.1 Introduction to Foodborne and Waterborne Bacterial Diseases 282

Many Foodborne and Waterborne Diseases Have a Bacterial Cause 282

There Are Several Ways Foods or Water Become Contaminated 282

10.2 Foodborne Intoxications 283

Bacterial Food Poisoning Can Result from an Intoxication 283

10.3 Foodborne and Waterborne Infections 286

Typhoid Fever Involves a Blood Infection 286

Salmonellosis Can Be Contracted from a Variety of Foods 288

Shigellosis (Bacterial Dysentery) Occurs Where Sanitary Conditions Are Lacking 289

Cholera Can Involve Enormous Fluid Loss 290

E. coli Diarrheas Cause Various Forms of Gastroenteritis 293

Gastric Ulcer Disease Can Be Spread Person to Person 295

Campylobacteriosis Results from Consumption of Contaminated Poultry or Dairy Products 297

Listeriosis Usually Manifests Itself as Meningoencephalitis or Septicemia 298

Several Other Bacterial Species Can Be Transmitted through Food or Water 299

Chapter Review 305

11 Soilborne and Arthropodborne Bacterial Diseases 308

11.1 Soilborne Bacterial Diseases 310

Anthrax Is an Enzootic Disease 310

Tetanus Causes Hyperactive Muscle Contractions 312

Gas Gangrene Causes Massive Tissue Damage 312

Leptospirosis Is a Zoonotic Disease Found Worldwide 314

11.2 Arthropodborne Bacterial Diseases 316

Plague Can Be a Highly Fatal Disease 316

Tularemia Has More Than One Disease Presentation 318

Lyme Disease Can Be Divided into Three Stages 319

Relapsing Fever Is Carried by Ticks and Lice 321

11.3 Rickettsial and Ehrlichial Arthropodborne Diseases 322

Rickettsial Infections Are Transmitted by Arthropods 322

Ehrlichial Infections Are Emerging Diseases in the United States 326

Chapter Review 329

12 Sexually Transmitted, Contact, and Miscellaneous Bacterial Diseases . . 333

12.1 Sexually Transmitted Diseases 335

Syphilis Is a Chronic, Infectious Disease 335

Gonorrhea Can Be an Infection in Any Sexually Active Person 337

Chlamydial Urethritis Can Be Asymptomatic 338

Chancroid Causes Painful Genital Ulcers 342

Ureaplasma Urethritis Produces Mild Symptoms 343

Other Sexually Transmitted Diseases Also Exist 343

12.2 Contact Bacterial Diseases 344

Leprosy (Hansen Disease) Is a Chronic, Systemic Infection 344

Staphylococcal Contact Diseases Have Several Manifestations 347

Trachoma Is Transmitted by Personal Contact 349

Bacterial Conjunctivitis (Pinkeye) Is Very Common 351

Yaws Starts as Skin Sores 351

12.3 Miscellaneous Bacterial Diseases 352

There Are Several Endogenous Bacterial Diseases 352

Animal Bite Diseases Occasionally Occur 353

Oral Diseases Cause Pain and Disability for Affected Individuals 354

Urinary Tract Infections Can Become Serious Health Problems 357

Courtesy of Greg Knobloch/CDC.

Nosocomial Infections Can Be Acquired in a
Healthcare Setting 359
Chapter Review 362

PART 4 VIRUSES AND EUKARYOTIC MICROORGANISMS 366

13 The Viruses and Virus-Like Agents . 369

- 13.1 Foundations of Virology 370**
Many Scientists Contributed to the Early
Understanding of Viruses 370
- 13.2 What are Viruses? 373**
Viruses Are Tiny Infectious Agents 373
Viruses Are Grouped by Their Shape 374
Viruses Have a Host Range and Tissue
Specificity 376
- 13.3 The Classification of Viruses 376**
Nomenclature and Classification Do Not
Use Conventional Taxonomic
Groups 376
- 13.4 Virus Replication and Its Control 378**
The Replication of Bacteriophages Is a Five-
Step Process 378
Animal Virus Replication Has Similarities to
Phage Replication 380
Some Animal Viruses Can Exist as
Provirus 384
Antiviral Drugs Can Be Used to Treat a
Limited Number of Human
Viral Diseases 385
Interferon Puts Cells in an Antiviral
State 385
- 13.5 The Cultivation and Detection of
Viruses 388**
Detection of Viruses Often Is Critical to
Disease Identification 388
Cultivation and Detection of Viruses Most
Often Uses Cells in Culture 390
- 13.6 Tumors and Viruses 393**
Cancer Is an Uncontrolled Growth and
Spread of Cells 393
Viruses are Responsible for Up to 20 Percent
of Human Tumors 393
Oncogenic Viruses Transform Infected
Cells 394
- 13.7 Emerging Viruses and Virus
Evolution 398**
Emerging Viruses Usually Arise Through
Natural Phenomena 398
There Are Three Hypotheses for the Origin
of Viruses 399
- 13.8 Virus-Like Agents 400**
Viroids Are Infectious RNA Particles 400
Prions Are Infectious Proteins 400
Chapter Review 404

Courtesy of Chris Zahniser/CDC.

14 Viral Infections of the Respiratory Tract and Skin. 408

- 14.1 Viral Infections of the Upper
Respiratory Tract 409**
Influenza Is a Highly Communicable Acute
Respiratory Infection 409
Rhinovirus Infections Produce
Inflammation in the Upper Respiratory
Tract 414
Adenovirus Infections Also Produce
Symptoms Typical of a Common Cold
415
- 14.2 Viral Infections of the Lower
Respiratory Tract 416**
Paramyxovirus Infections Affect the Lower
Respiratory Tract 416
Severe Acute Respiratory Syndrome (SARS)
Spreads through Close Person-to-Person
Contact 418
- 14.3 Diseases of the Skin Caused by
Herpesviruses 420**
Human Herpes Simplex Infections Are
Widespread and Often Recurrent 420
Chickenpox Is No Longer a Prevalent
Disease in the United States 423
Human Herpesvirus 6 Infections Primarily
Occur in Infancy 424
A Few Herpesvirus Infections Are
Oncogenic 426
- 14.4 Other Viral Diseases of the Skin 427**
Paramyxovirus Infections Can Cause
Typical Childhood Diseases 427
Rubella (German Measles) Is an Acute,
Mildly Infectious Disease 429

Fifth Disease (Erythema Infectiosum)
Produces a Mild Rash 430
Some Human Papillomavirus Infections
Cause Warts 430
Poxvirus Infections Have Had Great Medical
Impacts on Populations 431
Chapter Review 436

15 Viral Infections of the Blood, Lymphatic, Gastrointestinal, and Nervous Systems 440

15.1 Viral Diseases of the Blood and
Lymphatic Systems 442
The Human Immunodeficiency Virus (HIV)
Is Responsible for HIV Disease and
AIDS 442
Two Herpesviruses Cause Blood
Diseases 448
Several Hepatitis Viruses Are
Bloodborne 451

15.2 Viral Diseases Causing Hemorrhagic
Fever 454
Flaviviruses Can Cause a Terrifying and
Severe Illness 454
Bunyaviruses Are Spread by Infected
Animals 455
Members of the *Filoviridae* Produce Severe
Hemorrhagic Lesions of the Tissues 456
Members of the *Arenaviridae* Are Associated
with Chronic Infections in Rodents 458

15.3 Viral Infections of the Gastrointestinal
Tract 459

Hepatitis Viruses A and E Are Transmitted by
the Gastrointestinal Tract 459
Viral Gastroenteritis Is Caused by Several
Unrelated Viruses 462

15.4 Viral Diseases of the Nervous System 464

The Rabies Virus Is of Great Medical
Importance Worldwide 464
The Polio Virus May Be the Next Infectious
Disease Eradicated 466
Different Flaviviruses Can Be Carried by
Blood-Sucking Arthropods 468
Chapter Review 472

16 Eukaryotic Microorganisms: The Fungi 476

16.1 Characteristics of Fungi 477

Fungi Share a Combination of
Characteristics 478
Fungal Growth Is Influenced by Several
Factors 479
Reproduction in Fungi Involves Spore
Formation 483

16.2 The Classification of Fungi 485

Fungi Can Be Classified into Five Different
Phyla 485
Yeasts Represent a Term for Any Single-
Celled Stage of a Fungus 491

16.3 Fungal Diseases of the Skin 494

Dermatophytosis Is an Infection of the Body
Surface 494
Candidiasis Often Is a Mild, Superficial
Infection 495
Sporotrichosis Is an Occupational
Hazard 496

16.4 Fungal Diseases of the Lower Respiratory Tract 497

Cryptococcosis Usually Occurs in
Immunocompromised Individuals 497
Histoplasmosis Can Produce a Systemic
Disease 498
Blastomycosis Usually Is Acquired Via the
Respiratory Route 498
Coccidioidomycosis Can Become a
Potentially Lethal Infection 499
Pneumocystis Pneumonia Can Cause a
Lethal Pneumonia 499
Other Fungi Also Cause Mycoses 500
Chapter Review 502

17 Eukaryotic Microorganisms: The Parasites 506

17.1 Classification and Characteristics of Protists 508

The Protista Are a Perplexing Group of
Microorganisms 508
The Protozoa Encompass a Variety of
Lifestyles 508

Parasite Life Cycles Have Some Unique Features 513

17.2 Protozoal Diseases of the Skin, and the Digestive and Urinary Tracts 514

Leishmania Can Cause a Cutaneous or Visceral Infection 514

Several Protozoal Parasites Cause Diseases of the Digestive System 515

A Protozoan Parasite Also Infects the Urinary Tract 519

17.3 Protozoal Diseases of the Blood and Nervous System 520

The *Plasmodium* Parasite Infects the Blood 520

The *Trypanosoma* Parasites Can Cause Life-Threatening Systemic Diseases 523

Babesia Is an Apicomplexan Parasite 524

Toxoplasma Causes a Relatively Common Blood Infection 525

Naegleria Can Infect the Central Nervous System 527

17.4 The Multicellular Helminths and Helminthic Infections 528

There Are Two Groups of Parasitic Helminths 528

Several Trematodes Can Cause Human Illness 529

Tapeworms Survive in the Human Intestines 532

Humans Are Hosts to at Least 50 Roundworm Species 534

Roundworms Also Infect the Lymphatic System 537

Chapter Review 539

PART 5 DISEASE AND RESISTANCE 544

18 Infection and Disease 547

18.1 The Host-Microbe Relationship 548

The Human Body Maintains a Symbiosis with Microbes 549

Pathogens Differ in Their Ability to Cause Disease 550

Several Events Must Occur for Disease to Develop in the Host 551

18.2 Establishment of Infection and Disease 554

Diseases Progress through a Series of Stages 554

Pathogen Entry into the Host Depends on Cell Adhesion and the Infectious Dose 555

Breaching the Host Barriers Can Establish Infection and Disease 557

Successful Invasiveness Requires Pathogens to Have Virulence Factors 558

Pathogens Must Be Able to Leave the Host to Spread Disease 561

18.3 Infectious Disease Epidemiology 562

Epidemiologists Have Several Terms that Apply to the Infectious Disease Process 562

Infectious Diseases Can Be Transmitted in Several Ways 562

Epidemiologists Often Have to Identify the Reservoir of an Infectious Disease 566

Diseases also Are Described by How They Occur within a Population 567

Nosocomial Infections Are Serious Health Threats within the Health Care System 569

Infectious Diseases Continue to Challenge Public Health Organizations 569

Chapter Review 576

© Chris Hellyar/Shutterstock, Inc.

19 Resistance and the Immune System: Innate Immunity. 580

19.1 An Overview to Host Immune Defenses 581

Blood Cells Form an Important Defense for Innate and Acquired Immunity 581

The Lymphatic System Is Composed of Cell and Tissues Essential to Immune Function 584

Innate and Acquired Immunity Are Essential Components of a Fully Functional Human Immune System 584

19.2 The Innate Immune Response 586

Mechanical, Chemical, and Microbiological Barriers Are Exposed First Lines of Defense 586

Phagocytosis Is a Nonspecific Defense Mechanism to Clear Microbes from Infected Tissues 587

Inflammation Plays an Important Role in Fighting Infection 589

Moderate Fever Benefits Host Defenses 592

Natural Killer Cells Recognize and Kill Abnormal Cells 593

Complement Marks Pathogens for Destruction 593

Innate Immunity Depends on Receptor Recognition of Common Pathogen-Associated Molecules 594

Chapter Review 598

Courtesy of Dr. Gordon Roberstad/CDC.

20 Resistance and the Immune System: Acquired Immunity 601

20.1 An Overview and Introduction to the Acquired Immune Response 603

The Ability to Eliminate Pathogens Requires
a Multifaceted Approach 603

Acquired Immunity Generates Two
Complementary Responses to Most
Pathogens 605

Clonal Selection Activates the Appropriate B
and T Cells 606

The Immune System Originates from
Groups of Stem Cells 608

20.2 The Humoral Immune Response 610

Humoral Immunity Is a Response Mediated
by Antigen-Specific B Lymphocytes 610

There Are Five Immunoglobulin
Classes 611

Antibody Responses to Pathogens Are of
Two Types 612

Antibody Diversity Is a Result of Gene
Rearrangements 613

Antibody Interactions Mediate the Disposal
of Antigens (Pathogens) 615

20.3 The Cell Mediated Immune Response 617

Cellular Immunity Relies on T-Lymphocyte
Receptors and Recognition 617

Naive T Cells Mature into Effector
T Cells 618

Cytotoxic T Cells Recognize MHC-1
Peptide Complexes 619

T_H2 Cells Initiate the Cellular Response to
Humoral Immunity 621

Chapter Review 625

21 Immunity and Serology 628

21.1 Immunity to Disease 630

Acquired Immunity Can Result by Actively
Producing Antibodies to an Antigen 630

There Are Several Types of Vaccine
Strategies 631

Acquired Immunity Also Can Result by
Passively Receiving Antibodies to an
Antigen 636

Herd Immunity Results from Effective
Vaccination Programs 639

Do Vaccines Have Dangerous
Side Effects? 641

21.2 Serological Reactions 643

Serological Reactions Have Certain
Characteristics 643

Neutralization Involves Antigen-Antibody
Reactions 644

Precipitation Requires the Formation of a
Lattice Between Soluble Antigen and
Antibody 644

Agglutination Involves the Clumping of
Antigens 645

Complement Fixation Can Detect
Antibodies to a Variety of Pathogens 647

Labeling Methods Are Used to Detect
Antigen-Antibody Binding 648

21.3 Additional Laboratory Tests 652

Monoclonal Antibodies Are Becoming a
“Magic Bullet” in Biomedicine 652

Gene Probes Are Single-Stranded DNA
Segments 655

Chapter Review 658

22 Immune Disorders 661

22.1 Type I IgE-Mediated Hypersensitivity 663

Type I Hypersensitivity Is Induced by
Allergens 663

Systemic Anaphylaxis Is the Most
Dangerous Form of a Type I
Hypersensitivity 666

Atopic Disorders Are the Most Common
Form of a Type I Hypersensitivity 667

Allergic Reactions Also Are Responsible for

Triggering Many Cases of Asthma 669

Why Do Only Some People Have IgE-Mediated Hypersensitivities? 670

Therapies Sometimes Can Control Type I Hypersensitivities 671

22.2 Other Types of Hypersensitivity 673

Type II Cytotoxic Hypersensitivity Involves Antibody-Mediated Cell Destruction 673

Type III Immune Complex Hypersensitivity Is Caused by Antigen-Antibody Aggregates 675

Type IV Cellular Hypersensitivity Is Mediated by Antigen-Specific T Cells 678

22.3 Autoimmune Disorders and Transplantation 680

An Autoimmune Disorder Is a Failure to Distinguish Self from Non-self 680

Transplantation of Tissues or Organs Is an Important Medical Therapy 683

22.4 Immunodeficiency Disorders 686

Immunodeficiencies Can Involve Any Aspect of the Immune System 686

Chapter Review 689

PART 6 CONTROL OF MICROORGANISMS 692

23 Physical and Chemical Control of Microorganisms 695

23.1 General Principles of Microbial Control 697

Sterilization and Sanitization Are Key to Good Public Health 697

23.2 Physical Methods of Control 698

Heat Is One of the Most Common Physical Control Methods 698

Dry and Moist Heat Are Applied Differently 699

Filtration Traps Microorganisms 705

Ultraviolet Light Can Be Used to Control Microbial Growth 706

Other Types of Radiation Also Can Sterilize Materials 707

Preservation Methods Retard Spoilage by Microorganisms in Foods 707

23.3 General Principles of Chemical Control 710

Medicinal Chemicals Came into Widespread Use in the 1800s 710

Antiseptics and Disinfectants Have Distinctive Properties 711

Antiseptics and Disinfectants Can Be Evaluated for Effectiveness 712

23.4 Chemical Methods of Control 713

Halogens Oxidize Proteins 713

Phenol and Phenolic Compounds Denature Proteins 715

Heavy Metals Interfere with Microbial Metabolism 716

Alcohols Denature Proteins and Disrupt Membranes 716

Soaps and Detergents Act as Surface-Active Agents 717

Hydrogen Peroxide Damages Cellular Components 718

Some Chemical Agents Can Be Used for Sterilization 718

Chapter Review 722

24 Antimicrobial Drugs 726

24.1 The History and Properties of Antimicrobial Agents 728

The History of Chemotherapy Originated with Paul Ehrlich 728

Alexander Fleming's Serendipitous Discovery of Penicillin Ushered in the Era of Antibiotics 729

Antimicrobial Agents Have a Number of Important Properties 730

24.2 The Synthetic Antibacterial Agents 732

Sulfanilamide and Other Sulfonamides

Target Specific Metabolic Reactions 732

Other Synthetic Antimicrobials Have Additional Bacterial Cell Targets 733

24.3 The Beta-Lactam Family of Antibiotics 734

Penicillin Has Remained the Most Widely Used Antibiotic 734

Other Beta-Lactam Antibiotics Also Inhibit Cell Wall Synthesis 735

24.4 Other Bacterially Produced Antibiotics 737

Vancomycin Also Inhibits Cell Wall Synthesis 737

Polypeptide Antibiotics Affect the Cell Membrane 737

Many Antibiotics Affect Protein Synthesis 737

Some Antibiotics Inhibit Nucleic Acid Synthesis 741

24.5 Antifungal and Antiparasitic Agents 743

Several Classes of Antifungal Drugs Cause Membrane Damage 743

The Goal of Antiprotozoal Agents Is to Eradicate the Parasite 743

Anthelmintic Agents Are Targeted at Nondividing Helminths 745

24.6 Antibiotic Assays and Resistance 746

There Are Several Antibiotic Susceptibility Assays 746

There Are Four Mechanisms of Antibiotic Resistance 747

- Antibiotic Resistance Is of Grave Concern in the Medical Community 749
- New Approaches to Antibiotic Therapy Are Needed 750
- Chapter Review 754

PART 7 MICROBIOLOGY AND PUBLIC HEALTH . . . 758

25 Microbiology of Foods. 761

- 25.1 Food Spoilage 762**
 - Food Spoilage Comes from Many Microbial Sources 763
 - Several Conditions Can Determine If Spoilage Will Occur 763
 - The Microorganisms Responsible for Spoilage Produce Specific Products 765
 - Meats and Fish Can Become Contaminated in Several Ways 765
 - Poultry and Eggs Can Spoil Quickly 766
 - Breads and Bakery Products Can Support Bacterial and Fungal Growth 767
 - Some Grains Are Susceptible to Spoilage 767
 - Milk and Dairy Products Sometimes Sour 767
- 25.2 Food Preservation 769**
 - Heat Denatures Proteins 770
 - Low Temperatures Slow Microbial Growth 773
 - Drying and Osmotic Pressure Help Preserve Foods 774
 - Chemical Preservatives Help Keep Foods Fresh 776
 - Radiation Can Sterilize Foods 776
 - Foodborne Diseases Can Result from an Infection or Intoxification 777
 - HACCP Systems Attempt to Identify Potential Contamination Points 779
- 25.3 Foods from Microorganisms 780**
 - Many Foods Are Fermented Products 780
 - Many Milk Products Are the Result of Fermentation 782
 - Chapter Review 785

26 Environmental Microbiology 789

- 26.1 Water Pollution 791**
 - Unpolluted and Polluted Water Contain Different Microbial Populations 791
 - There Are Three Types of Water Pollution 793
 - Diseases Can Be Transmitted by Water 794
- 26.2 The Treatment of Water and Sewage 796**
 - Water Purification Is a Three-Step Process 796
 - Sewage Treatment Can Be a Multistep

- Process 798
- Biofilms Are Prevalent in the Environment 800
- The Bacteriological Analysis of Water Tests for Indicator Organisms 801

- 26.3 The Cycles of Elements in the Environment 802**
 - The Carbon Cycle Is Influenced by Microorganisms 802
 - The Sulfur Cycle Recycles Sulfate Molecules 803
 - The Nitrogen Cycle Is Dependent on Microorganisms 806
 - Chapter Review 810

27 Industrial Microbiology and Biotechnology 814

- 27.1 Microorganisms in Industry 816**
 - Microorganisms Produce Many Useful Organic Compounds 816
 - Microorganisms Also Produce Important Enzymes and Other Products 818
- 27.2 Alcoholic Beverages 820**
 - Beer Is Produced by the Fermentation of Malted Barley 820
 - Wine Is Produced by the Fermentation of Fruit or Plant Extracts 821
 - Distilled Spirits Contain More Alcohol than Beer or Wine 824
- 27.3 Other Microbial Products 825**
 - Many Antibiotics Are the Result of Industrial Production 825
 - Some Microbial Products Can Be Used to Control Insects 826
 - Fungal Organisms Also Are Being Commercially Developed 828
 - Bioremediation Helps Clean Up Pollution Naturally 829
 - Industrial Genetic Engineering Continues to Make Advances 830
 - Chapter Review 834

APPENDICES

- Appendix A. Metric Measurement A-1
- Appendix B. Temperature Conversion Chart A-1
- Appendix C. Answers to Even-Numbered End-of-Chapter Questions A-2
- Appendix D. Answers to MicroInquiry Questions A-13
- Glossary G-1
- Index I-1
- Photo Acknowledgments
