

1	Genes, Genomes, and Genetic Analysis.	1
2	DNA Structure and Genetic Variation.	38
3	Transmission Genetics: The Principle of Segregation	77
4	Chromosomes and Sex-Chromosome Inheritance	114
5	Genetic Linkage and Chromosome Mapping	150
6	Molecular Biology of DNA Replication and Recombination	190
7	Molecular Organization of Chromosomes.	221
8	Human Karyotypes and Chromosome Behavior.	251
9	Genetics of Bacteria and Their Viruses	295
10	Molecular Biology of Gene Expression	341
11	Molecular Mechanisms of Gene Regulation	380
12	Genomics, Proteomics, and Transgenics	431
13	Genetic Control of Development.	471
14	Molecular Mechanisms of Mutation and DNA Repair	509
15	Molecular Genetics of the Cell Cycle and Cancer	551
16	Mitochondrial DNA and Extranuclear Inheritance	587
17	Molecular Evolution and Population Genetics	611
18	The Genetic Basis of Complex Traits	651
