Preface	vii
About the Editors	ix
Contributors	xi
PART I Overview	1
Chapter 1 Introduction	3
<i>Frank T. Robb, Garabed Antranikian, Dennis W. Grogan, and Arnold J.M. Driessen</i>	
PART II Molecular Basis of Thermostability	7
Chapter 2 Compatible Solutes of (Hyper)thermophiles and Their Role in Protein Stabilization	9
<i>Helena Santos, Pedro Lamosa, Tiago Q. Faria, Tiago M. Pais, Manuela López de la Paz, and Luis Serrano</i>	
Chapter 3 Relationships among Catalytic Activity, Structural Flexibility, and Conformational Stability as Deduced from the Analysis of Mesophilic–Thermophilic Enzyme Pairs and Protein Engineering Studies	25
<i>Reinhard Sterner and Eike Brunner</i>	
Chapter 4 Membranes and Transport Proteins of Thermophilic Microorganisms	39
<i>Sonja Verena Albers and Arnold J.M. Driessen</i>	
Chapter 5 Thermophilic Protein-Folding Systems	55
<i>Frank T. Robb and Pongpan Laksanalamai</i>	
Chapter 6 Physical Properties of Membranes Composed of Tetraether Archaeal Lipids	73
<i>Parkson Lee-Gau Chong</i>	
PART III Heat-Stable Enzymes and Metabolism	97
Chapter 7 Glycolysis in Hyperthermophiles	99
<i>Peter Schönheit</i>	
Chapter 8 Industrial Relevance of Thermophiles and Their Enzymes	113
<i>Garabed Antranikian</i>	

Chapter 9	Denitrification Pathway Enzymes of Thermophiles	161
	<i>Simon de Vries and Imke Schröder</i>	
PART IV	Genetics of Thermophiles	177
Chapter 10	DNA Stability and Repair	179
	<i>Malcolm F. White and Dennis W. Grogan</i>	
Chapter 11	Plasmids and Cloning Vectors for Thermophilic Archaea	189
	<i>Kenneth M. Stedman</i>	
Chapter 12	Genetic Analysis in Extremely Thermophilic Bacteria: An Overview	205
	<i>Dennis W. Grogan</i>	
Chapter 13	Targeted Gene Disruption as a Tool for Establishing Gene Function in Hyperthermophilic Archaea	213
	<i>Haruyuki Atomi and Tadayuki Imanaka</i>	
Chapter 14	Nanobiotechnological Potential of Viruses of Hyperthermophilic Archaea	225
	<i>Tamara Basta and David Prangishvili</i>	
PART V	Minimal Complexity Model Systems	237
Chapter 15	Master Keys to DNA Replication, Repair, and Recombination from the Structural Biology of Enzymes from Thermophiles	239
	<i>Li Fan, R. Scott Williams, David S. Shin, Brian Chapados, and John A. Tainer</i>	
Chapter 16	DNA Replication in Thermophiles	265
	<i>Jae-Ho Shin, Lori M. Kelman, and Zvi Kelman</i>	
Chapter 17	DNA-Binding Proteins and DNA Topology	279
	<i>Kathleen Sandman</i>	
Chapter 18	Structure and Evolution of the <i>Thermus thermophilus</i> Ribosome	291
	<i>Steven T. Gregory and Albert E. Dahlberg</i>	
Chapter 19	Protein Phosphorylation at 80°C and Above	309
	<i>Peter J. Kennelly</i>	
Chapter 20	Archaeal 20S Proteasome: A Simple and Thermostable Model System for the Core Particle	333
	<i>Joshua K. Michel and Robert M. Kelly</i>	
Index		347
