Chapter 1 Complexes of Nucleic Acids with Group I and II Cations

Chiaolong Hsiao, Emmanuel Tannenbaum,

Halena VanDeusen, Eli HersHKovitz, Ginger Perng,

Allen R. Tannenbaum and Loren Dean Williams

1.1	Introduction	1
1.1.1	Modern Treasure Troves of Structural Information: Large RNAs	2
1.2	Nucleic Acid Folding	2
1.2.1	Cations	2
1.2.2	The RNA Folding Hierarchy	3
1.2.3	Alternative RNA Folding Hierarchies	4
1.3	Coordination Chemistry	4
1.3.1	Group I	4
1.3.2	Group II	7
1.4	Experimental Methods for Determination of Cation Positions in X-ray Structures	24
1.4.1	Group I	24
1.4.2	Group II	25
1.5	The Two Binding-mode Formalism	25
1.5.1	Thermodynamic/Kinetic Definition	25
1.5.2	Structural Definition	26
1.5.3	Computational Definition	26
1.5.4	Breaking the Two Binding-mode Formalism	27
1.6	Reaction Coordinates for RNA Folding	27
1.6.1	The Utility of 3D Databases for Determining Mechanism	27

RSC Biomolecular Sciences

Nucleic Acid–Metal Ion Interactions

Edited by Nicholas V. Hud

Chapter 2 Coordinative Bond Formation Between Metal Ions and Nucleic Acid Bases

Bernhard Lippert

2.1	Introduction	39
2.1.1	Nucleic Acids and Metal Ions	39
2.1.2	Types of Interactions	40
2.1.3	Brief History	41
2.1.4	Scope	42
2.2	Nucleobases as Ligands	42
2.2.1	Location of Donor Sites in DNA and RNAs	42
2.2.2	Acid-Base Equilibria of Nucleobases	43
2.2.3	'Conventional' Metal Binding Sites in Neutral Nucleobases	44
2.2.4	Exocyclic Amino Groups: Not Used Unless Deprotonated	45
2.2.5	Metal Coordination to Rare Nucleobase Tautomers	46
2.2.6	Deprotonated Nucleobases	48
2.2.7	Organometallic Nucleobase Complexes	50
2.2.8	Chelates, Macrochelates and 'Indirect' Chelates	52
2.2.9	Coordination Behavior of Di- and Multinuclear Metal Complexes	52
2.2.10	Protonated Purine Bases as Ligands	54
2.2.11	Other Modes	54
2.2.12	Metal Migration	54
2.2.13	Metals as Chameleons in Nucleic Acid Coordination	54
2.2.14	Complex Stabilities	55
2.3	Consequences of Metal Coordination	57
2.3.1	Cross-link Formation in dsDNA	57
2.3.2	Multistranded Nucleic Acids	59
2.3.3	Subtle Effects of Metal Coordination	62
2.3.4	Irreversible Alterations	66
2.4	Summary and Outlook	68
References		69

Chapter 3 Sequence-specific DNA–Metal Ion Interactions*Nicholas V. Hud and Aaron E. Engelhart*

3.1	Introduction	75
3.2	A Brief Overview of Cation Binding Modes to DNA	77
3.3	Defining A-tracts, G-tracts and Generic DNA	79
3.4	Divalent Cation Localization	79
3.4.1	Divalent Cations and the Major Groove	79
3.4.2	Divalent Cations and the Minor Groove	86
3.5	Monovalent Cation Localization	92
3.5.1	Monovalent Cations and the Major Groove	92
3.5.2	Monovalent Cations and the Minor Groove	96
3.6	Testing Cation Size Selection of the A-tract Minor Groove Using a Large Monovalent Cation	103
3.7	Additional Experimental Evidence of Sequence-specific Binding of Cations to DNA	104
3.7.1	Capillary Electrophoresis	104
3.7.2	Hydration Measurements	104
3.8	Sequence-specific Cation Localization and DNA Fine Structure	106
3.9	Investigations of the Role of Cations in DNA Fine Structure Using Non-natural Bases	110
3.10	Conclusions and Perspectives	112
	Acknowledgements	112
	References	112

Chapter 4 Metal Ion Interactions with G-Quadruplex Structures*Aaron E. Engelhart, Janez Plavec, Özgül Persil and Nicholas V. Hud*

4.1	Introduction	118
4.2	A Brief Overview of G-quadruplex Structures and Folding Topologies	121
4.3	X-ray Crystallographic Studies of Cation Coordination by G-quadruplexes	123
4.3.1	X-ray Studies of Monovalent Cation Coordination	123
4.3.2	X-ray Studies of Divalent Cation Coordination	128
4.4	NMR Studies of Cation Coordination by G-quadruplexes	130
4.4.1	Solution-state NMR Studies of Monovalent Cation Coordination	130

4.4.2 Solid-state NMR Studies of Cation Coordination	133
4.5 Direct Observation of Movement and Exchange of Cations Within G-quadruplexes	134
4.6 G-quadruplex Cation-dependent Stability	139
4.7 Cations and G-quadruplex Polymorphism	141
4.8 Non-biological Applications of G-quartet-Cation Interactions	145
4.9 Conclusion	147
Acknowledgements	147
References	147

Chapter 5 Characterization of Nucleic Acid-Metal Ion Binding by Spectroscopic Techniques

Victoria J. DeRose

5.1 Introduction	154
5.2 NMR Spectroscopy	159
5.2.1 (Indirect) Detection of Metal Interactions Using NMR Spectroscopy	159
5.2.2 Spectroscopy of NMR-active Cation Probes	160
5.3 EPR Spectroscopy	163
5.3.1 EPR Spectroscopy of Oligonucleotide-bound Paramagnetic Ions	164
5.3.2 Mn^{2+} and VO^{2+} Environments Probed by ENDOR and ESEEM Spectroscopies	164
5.4 X-ray Absorption Spectroscopy and Small-angle X-ray Scattering	166
5.4.1 X-ray Absorption Spectroscopy (XAS)	168
5.4.2 Small-angle X-ray Scattering (SAXS) and ASAX	169
5.5 Optical Methods: Lanthanide Luminescence	170
5.6 Vibrational Spectroscopy: IR, Raman and Resonance Raman	173
5.7 Conclusion	174
Acknowledgements	175
References	175

Chapter 6 Metal Ions and the Thermodynamics of RNA Folding

David P. Giedroc and Nicholas E. Grosseohme

6.1 Introduction	180
6.2 Physical Properties of RNA and Metal Ions Relevant to RNA Folding	181

6.2.1	Implications of RNA as a Folded Polyanion in Ion-RNA Interactions	181
6.2.2	Physical Properties of Ions: Monovalent <i>versus</i> Di(multi)valent Ions	182
6.2.3	RNA Folding is Generally Hierarchical	185
6.2.4	Intrinsic Competition of Monovalent and Divalent Ions for 'Sites' on RNA	186
6.3	Mg ²⁺ Ions, Hydrodynamic Collapse and Dynamical Restriction	187
6.3.1	Mg ²⁺ Drives Hydrodynamic Collapse of Complex RNAs	188
6.3.2	Dynamical Restriction of RNA Conformational Fluctuations by Mg ²⁺ Ions	190
6.4	Metal Ion Binding Models	192
6.4.1	Operational Classes of Ions that Associate with RNA	192
6.4.2	General Considerations and Complications	194
6.4.3	Direct Binding Methods	197
6.4.4	The Hill Model	200
6.4.5	Diffuse Ion Association Models	204
6.4.6	Linkage of Protonation to Mg ²⁺ Binding and RNA Folding	205
6.5	How Mg ²⁺ Stabilizes RNA from Single-molecule Unfolding Studies Using Mechanical Force	207
6.6	Conclusion and Perspective	212
	Acknowledgements	213
	References	213

Chapter 7 Metal Ions and RNA Folding Kinetics

Somdeb Mitra and Michael Brenowitz

7.1	Introduction	221
7.1.1	A Brief Overview	221
7.1.2	RNA Folding is Hierarchical	222
7.1.3	Why are Counterions Necessary for RNA Folding?	223
7.2	Cation-induced RNA Folding Kinetics	226
7.2.1	Effects of Ionic Strength on Net Energetic Stability of Initial, Intermediate and Final States	226
7.2.2	Position and Plasticity of the Transition State	235
7.2.3	Effects on the Initial Conformational Ensemble and Pathway Partitioning	246

7.3 Conclusion	253
Acknowledgement	253
References	254
Chapter 8 Metal Ions in RNA Catalysis	
<i>John K. Frederiksen, Robert Fong and Joseph A. Piccirilli</i>	
8.1 Introduction	260
8.2 Metal Ions and Their Ability to Facilitate RNA Catalysis in Biological Systems	262
8.3 Mechanistic Roles for Metal Ions in Ribozyme Reactions	266
8.3.1 Lewis Acid Stabilization of the Leaving Group	267
8.3.2 Nucleophile Activation	267
8.3.3 Coordination of Non-bridging Phosphoryl Oxygens	268
8.3.4 Induced Intramolecularity	269
8.3.5 Indirect Catalytic Contributions	269
8.4 Experimental Techniques for Detecting Catalytic Metal Ion–Ligand Interactions in Ribozymes	270
8.4.1 X-ray Crystallography	270
8.4.2 Spectroscopic Methods – Electron Paramagnetic Resonance (EPR) and Nuclear Magnetic Resonance (NMR)	271
8.4.3 Computational and Database Methods	272
8.4.4 Nucleotide Analogue Interference Mapping (NAIM)	273
8.4.5 Lanthanide Ion-induced Cleavage and Luminescence	274
8.4.6 Heavy Atom Isotope Effects	275
8.4.7 Metal Ion Rescue Experiments	276
8.4.8 Metal Rescue in Practice: The <i>Tetrahymena</i> Group I Ribozyme Active Site	277
8.5 The Large Ribozymes: A ‘Two-Metal Ion’ Mechanistic Paradigm	283
8.5.1 RNase P	284
8.5.2 Group II Intron	288
8.5.3 Spliceosome	293
8.6 The Small Ribozymes: Endonucleolytic Cleavage and General Acid–Base Catalysis	295
8.7 Conclusions	298
References	299

Chapter 9 Polyanion Models of Nucleic Acid–Metal Ion Interactions*J. Michael Schurr*

9.1	Introduction	307
9.1.1	Background and Objectives	307
9.1.2	Polyanions and Their Compensating Charges	309
9.1.3	The Ion Atmosphere	309
9.1.4	Equilibrium Polyion Properties and Phenomena	310
9.2	Statistical Mechanics, Configuration Integral and Potential of Mean Force	313
9.3	Ion Atmosphere Theory	315
9.3.1	The Standard Primitive Model for a Polyanion and Its Small Ion Atmosphere	315
9.3.2	The Non-linear Poisson–Boltzmann Equation	317
9.3.3	Solutions of the NLPB Equation	318
9.4	Connection of NLPB Theory to Thermodynamic Properties	319
9.4.1	Electrostatic Free Energy	319
9.4.2	Polyanion Activity Coefficient and Polyanion–Salt Preferential Interaction Coefficient	320
9.4.3	Osmotic Pressure and Osmotic Coefficient	323
9.5	Polyion Equilibria and Repulsive Interactions	323
9.5.1	Effect of Salt Concentration on the Association of a Polycation with a Polyanion	323
9.5.2	Effect of Salt Concentration on the Equilibrium Constant for a Conformational Transition	325
9.5.3	Temperature Dependence of a Conformational Transition	326
9.5.4	Proton Binding to an Acidic Ligand Adjacent to a Polyion	327
9.5.5	Binding a Ligand to Different Conformations of the Same Polyion	328
9.5.6	Absolute Equilibrium Constants	329
9.5.7	Repulsive Forces Between Rod-like Polyanions	332
9.6	Counterion Condensation Theory	333
9.6.1	Relation to NLPB Theory	333
9.6.2	Thermodynamic and Other Properties	335
9.6.3	Electrostatic Contribution to the Bending Rigidity and Persistence Length	336
9.6.4	Effect of Oligocations to Bend DNA	336

9.7	Attractions Between Like-charged Filaments and Condensed Phase Formation	337
9.7.1	Simulations and Analyses	337
9.7.2	The Tightly Bound Ion (TBI) Model	340
9.7.3	Effects of Helical Symmetry, DNA Shape and Fixed-counterion Models	342
	References	344
Chapter 10 Metal Ion–Nucleic Acid Interactions in Disease and Medicine		
<i>Ana M. Pizarro and Peter J. Sadler</i>		
10.1	Introduction	350
10.2	Mutagenesis and Carcinogenesis	351
10.2.1	Chromium	351
10.2.2	Arsenic	352
10.2.3	Other Metals	353
10.3	Antiviral Drugs	353
10.4	Metal-containing Anticancer Agents	358
10.4.1	Platinum Drugs	358
10.4.2	Titanium Agents	379
10.4.3	Ruthenium Drugs	381
10.4.4	Rhodium Complexes	389
10.4.5	Gold Complexes	393
10.4.6	Iron Helicates	395
10.5	Conclusions and Perspectives	396
