

Table of Contents

Preface	vii
Legend to the Frontispiece	ix

Part 1 Origin of Bacteria

1. The Origin of Life Based on Physical Principles	3
2. Preamble to Life	9
3. The First Cell	15
4. Development of Cell Physiology and Diversity	21

Part 2 Wall Structure

5. Covalent Bonds and Tensile Strength of Materials	39
6. Structure of the Fabric that Covers a Bacterium	49
7. The Covalently Linked Sacculus: the Nona-Muropeptide Model	61
8. The Structure of the Tessera; the Unit Structure of Murein Wall	71
9. Extrusion and Incorporation into Wall	77
10. The Role of Poles in the Growth Strategy of Bacteria	81

Part 3 Bacterial Morphologies

11. Sidewalls of Gram-Negative Rod-Shaped Bacteria	91
--	----

12. Growth Strategies for Gram-Positive Cells.....	99
13. Wall Growth Strategies for Gram-Negative Cells	109
14. Commas, Vibrios, Spirilla, and Helicobacters; Tapered and Branched Bacteria.....	119
15. Spirochetes and Spiroplasma and the Special Strategies for CWD (Cell Wall Deficient) Cells	137
16. Coccal Versus Rod-Shaped Cells, and the First Bacterium	147
17. Diseases: Old and New	161

Part 4 Antibiosis

18. Lysozymes as Alternatives to β -lactams Antibiotics Acting on the Bacterial Wall	181
19. Development of Wall Antibiotics and Bacterial Counter-Measures	185
20. Antibiotics and Resistance, with an Emphasis on Aminoglycosides.....	201
21. Future Chemotherapy Aimed at the Bacterial Murein	209
References.....	217
