Preface	xii
1 Carpel Evolution	1
<i>Aur�lie C.M. Vialette-Guiraud and Charlie P. Scutt</i>	
1.1 The importance of having carpels	1
1.2 Hypotheses of carpel origin	3
1.3 A phylogenetic framework for studies of carpel evolution	7
1.4 A morphological portrait of the ancestral carpel	10
1.5 The genetic control of carpel development in the first flowering plants	12
1.6 A major role for the E-function in the origin of the carpel?	16
1.7 Carpel specification in monocots	18
1.8 Gene duplication and carpel evolution in the core eudicots	20
1.9 The A-function finds a role in fruit development	22
1.10 The multiple origins and mechanisms of syncarpy in the angiosperms	23
1.11 A fruit by any other name: evolutionary convergence between angiosperms and gymnosperms	26
References	27
2 Gynoecium Patterning in Arabidopsis: A Basic Plan Behind a Complex Structure	35
<i>Eva Sundberg and Cristina Ferr�ndiz</i>	
2.1 Introduction	35
2.2 The basic plan in lateral organs	36
2.3 The Arabidopsis gynoecium	41
2.4 Genetic and hormonal factors controlling gynoecium development	43
2.5 Conclusion	57
Acknowledgements	57
References	57
3 The Ins and Outs of Ovule Development	70
<i>Raffaella Battaglia, Monica Colombo and Martin M. Kater</i>	
3.1 Introduction	70
3.2 Origin of the ovule	71

3.3	Ovule development in <i>Arabidopsis</i>	72
3.4	Sporophytic tissues	73
3.5	Gametophytic tissue	81
3.6	Interaction between the female gametophyte and the maternal sporophyte	91
3.7	Ovule identity determination	93
	References	97
4	Fertilisation and Fruit Initiation	107
	<i>Sara Fuentes and Adam Vivian-Smith</i>	
4.1	Introduction	107
4.2	Pollination	110
4.3	Female receptivity and the cessation of gynoecial growth	113
4.4	Additional restraints on flower development and fruit initiation	115
4.5	Fertilisation	117
4.6	Hormonal cues during fruit initiation	123
4.7	RNA silencing during fruit initiation	141
4.8	Signal transduction from ovule to carpel and vascular canalisation	145
4.9	Current models of fruit initiation	147
4.10	Concluding remarks	150
	Acknowledgements	151
	References	151
5	<i>Arabidopsis</i> Fruit Development	172
	<i>Antonio Martínez-Laborda and Antonio Vera</i>	
5.1	Introduction	172
5.2	Morphology of the <i>Arabidopsis</i> silique	174
5.3	Determining the boundary between valve and replum: valve margin genes	177
5.4	The making of valves and replum requires repression of valve margin genes	179
5.5	Suppressors of the <i>rpl</i> phenotype: setting up territories	182
5.6	A model for patterning the mediolateral axis of the <i>Arabidopsis</i> silique	185
5.7	Auxin: a signaling molecule for the mediolateral axis?	192
5.8	A biotechnological view	195
	Acknowledgements	196
	References	196
6	Long-Distance Seed Dispersal	204
	<i>Frank M. Schurr, Orr Spiegel, Ofer Steinitz, Ana Trakhtenbrot, Asaf Tsoar and Ran Nathan</i>	
6.1	Introduction	205
6.2	Six generalizations on LDD mechanisms	214

6.3	A vector-based perspective on the evolution and predictability of long-distance seed dispersal	223
6.4	Future directions	230
	Acknowledgements	231
	References	231
7	Seed Dispersal and Crop Domestication: Shattering, Germination and Seasonality in Evolution Under Cultivation	238
	<i>Dorian Q. Fuller and Robin Allaby</i>	
7.1	Introduction	239
7.2	Loss of natural seed dispersal in wheat and barley: archaeobotanical evidence	240
7.3	Non-shattering in other cereals: rice, pearl millet and maize	246
7.4	The genetics of non-shattering cereals	249
7.5	Reduction in seed dispersal aids	252
7.6	Non-cereal alternative: appendage hypermorphism in fibre crops	254
7.7	Loss of natural seed dispersal in pulses and other crops	255
7.8	Germination traits in domestication: the importance of loss of dormancy	257
7.9	The genetic basis for dormancy and germination	260
7.10	Germination and seedling competition: changes in seed size	261
7.11	The genetics of seed size	271
7.12	Seasonality controls: photoperiodicity and vernalization	273
7.13	Discussion: evolution and development of domesticated seed traits	278
	References	280
8	Factors Influencing the Ripening and Quality of Fleshy Fruits	296
	<i>Cornelius S. Barry</i>	
8.1	Introduction	296
8.2	Control of fruit ripening	297
8.3	Transcription factors serve as master regulators of fruit ripening	298
8.4	Hormonal control of fruit ripening	302
8.5	The influence of light on fruit quality	306
8.6	The discovery of aroma and flavour genes in fruit	307
8.7	Cell wall changes influence fruit quality	309
8.8	The cuticle influences fruit quality and postharvest longevity	310

8.9	Genomics Resources	311
8.10	Conclusions and future perspectives	314
	Acknowledgements	314
	References	314
9	Parthenocarpy in Crop Plants	326
	<i>Tiziana Pandolfini, Barbara Molesini and Angelo Spena</i>	
9.1	Introduction	326
9.2	Parthenocarpy	328
9.3	Auxin-synthesis parthenocarpy	329
9.4	Parthenocarpy via auxin signal transduction	330
9.5	Parthenocarpy via gibberellin signal transduction	334
9.6	<i>Aucsa</i> -silencing parthenocarpy	334
9.7	Auxin sensitivity and parthenocarpy	335
9.8	Apetalous parthenocarpy and the role of other floral organs	336
9.9	Stenospermocarpy	336
9.10	Parthenocarpy in perennial crop plants	337
9.11	Parthenocarpy and fruit crop breeding	337
9.12	From green plants to fruit crop plants	340
	References	341
	Index	346

Colour plate section can be found between pages 34 and 35.
