

CONTENTS

Preface		vii
Chapter 1	Systems Biology of the Cell Cycle <i>Marco Vanoni and Lilia Alberghina</i>	1
Chapter 2	Miniemulsions for Biomedical Applications <i>Katharina Landfester</i>	7
Chapter 3	Site Directed Dichroism Spectroscopy <i>Josh Manor and Isaiah T Arkin</i>	13
Chapter 4	Protocells: Membranes and RNA <i>I. Chen</i>	19
Chapter 5	Lipid Vesicles as Biomimetic Systems <i>Peter Walde</i>	23
Chapter 6	SPM Techniques: Peculiarities and Applications <i>M. Girasole, G. Longo, G. Pompeo and A. Cricenti</i>	29
Chapter 7	Membrane Reconstitution Systems for the Investigation of Peptide-Lipid Interaction: Impact for Drug Design <i>Thomas Gutschmann</i>	37
Chapter 8	Towards Bioinspired Sensors: Preliminary Actions <i>Antonella Macagnano, Simone Pantalei, Emiliano Zampetti and Andrea Bearzotti</i>	41
Chapter 9	Give Me a Photon to Stand on, and I Will Synthesize Life! <i>Francesco Milano and Massimo Trotta</i>	49
Chapter 10	Stochastic Simulations of Proto-Cells: Lipid Vesicles Dynamics <i>F. Mavelli, F. Ciriaco, L. Cassidei and U.T. Lamanna</i>	53
Chapter 11	Contributions of Synthetic Biology to the Field of the Origin of Life <i>Pier Luigi Luisi</i>	59

Chapter 12	Preparation of Lipid Vesicles	75
	<i>M. Cataldo, K. Cosentino and A. Ramundo-Orlando</i>	
Chapter 13	Discrete Methods for the Analysis of Biological Networks and Pathways	83
	<i>Ron Y. Pinter</i>	
Chapter 14	Implicit Knowledge Discovery	87
	<i>Francis A. Farrelly and Alberto Petri</i>	
Chapter 15	Questions and Answers	93
Index		103
