

CONTENTS

Preface		vii
Chapter 1	Designing Non-Classical Inclusion Bodies <i>Špela Peternel</i>	1
Chapter 2	Extraribosomal Functions of Ribosomal Protein S19" in Monograph Ribosomal Proteins <i>Tetsuro Yamamoto and Hiroshi Nishiura</i>	21
Chapter 3	Order-Disorder Transitions in Ribosome Assembly <i>Youri Timsit, Frédéric Allemand, Claude Chiaruttini and Mathias Springer</i>	41
Chapter 4	Disruption of Ribosomal Protein Gene Expression in Eukaryotes: A Class of Mutations Causing Similar Global Growth Defects with Cellular Variations <i>Catherine Kirn-Safran</i>	55
Chapter 5	Ancestral Protein Reconstruction as a New Field in Protein Engineering <i>Ayumu Konno, Tomohisa Ogawa, and Tsuyoshi Shirai</i>	65
Chapter 6	Ribosomal Proteins in Important Tropical Diseases <i>Viroj Wiwanitkit</i>	91
Chapter 7	Three Challenges in Post-Proteomics Time <i>Shaomin Yan and Guang Wu</i>	99
Chapter 8	Self-similar Property of Ribosomal Proteins <i>Chang-Yong Lee</i>	103
Chapter 9	Synthesizing Mammalian Cell Adhesive Surfaces using Self- Assembling Fibronectin Domains <i>Patricia Pereira and Christopher F. van der Walle</i>	121
Chapter 10	Halophilic Adaptations of Proteins <i>Albert Bolhuis, Daniel Kwan and Judith R. Thomas</i>	143

Chapter 11	Alkaline Adaptation of Proteins	175
	<i>Tsuyoshi Shirai, Tohru Kobayashi, Susumu Ito and Koki Horikoshi</i>	
Index		211
