Preface XV

List of Contributors XVII

- 1 Comparative Genomics of *Pseudomonas* 1**
Kristoffer Kiil, Tim T. Binnewies, Hanni Willenbrock, Susse Kirkelund Hansen, Lei Yang, Lars Jelsbak, David W. Ussery, and Carsten Friis
 - 1.1 Introduction 1
 - 1.1.1 Other Species of *Pseudomonas* 2
 - 1.1.2 Obtaining Sequence Data on *Pseudomonas* 4
 - 1.2 Pan/Core Genome of *Pseudomonas* 4
 - 1.3 Phylogeny of *Pseudomonas* 6
 - 1.4 Blast Atlas of *Pseudomonas* Genomes 8
 - 1.4.1 Region 5 243 000–5 361 000 12
 - 1.4.2 Region 713 000–785 000 14
 - 1.5 Functional Categories 14
 - 1.6 Codon Usage and Expression 17
 - 1.7 Future Outlook 20
 - References 21
- 2 Clinical Relevance of *Pseudomonas aeruginosa*: A Master of Adaptation and Survival Strategies 25**
Niels Hoiby, Helle Krogh Johansen, Claus Moser, and Oana Ciofu
 - 2.1 Introduction 25
 - 2.2 CF 26
 - 2.3 Survival of *P. aeruginosa* by Adaptation to the Inflammatory Defense System 27
 - 2.4 Conductive and the Respiratory Zones of the Lungs 31
 - 2.5 Survival of *P. aeruginosa* by Adaptation to the Respiratory Zone of the Lungs 32

2.6	Survival of <i>P. aeruginosa</i> by Adaptation to the Conductive Zone of the Lungs	33
2.7	Survival of <i>P. aeruginosa</i> by Adaptation to the Antibiotic Therapy	35
2.8	Evolutionary Implications of the Adaptability of <i>P. aeruginosa</i>	37
	References	37
3	Adherence of <i>Pseudomonas aeruginosa</i>	45
	<i>Randall T. Irvin</i>	
3.1	Introduction	45
3.2	What is Adherence?	46
3.3	Role of Adherence in Infection	46
3.4	How is Bacterial Adherence Associated with Virulence?	47
3.5	<i>P. aeruginosa</i> Adhesins	50
3.6	Surface Receptor Requirements of the Pilus Adhesin	51
3.7	How Does PilA Mediate Attachment to Human Mucosal Surfaces?	53
3.8	X-ray Crystallographic Structural Studies of the Pilin Structural Protein	56
3.9	Structure of the Pilus Fiber	60
3.10	Structure of the Receptor-Binding Domain and Location on the Pilus	63
3.11	Structural Nature of the Receptor-Binding Domain	66
3.12	Twitching Motility	68
3.13	How Does the Pilus Attach to a Solid Surface?	69
3.14	The Monkey-Bar Swing Paradox	72
3.15	Molecular Basis for Receptor-binding Domain Interaction with Steel Surfaces	73
3.16	Pili as Nanowires for Redox Reactions	76
3.17	What is the Most Important Role of Adherence to <i>P. aeruginosa</i>	76
	References	77
4	Flagella and Pili of <i>Pseudomonas aeruginosa</i>	85
	<i>Jeevan Jyot and Reuben Ramphal</i>	
4.1	Introduction	85
4.2	Flagellum of <i>P. aeruginosa</i>	85
4.2.1	Structure of the <i>P. aeruginosa</i> Flagellum	86
4.2.2	Chromosomal Organization of the Flagellar Genes of <i>P. aeruginosa</i>	86
4.2.3	Transcriptional Hierarchy of the Flagellar Genes	90
4.2.4	Model Proposed for Flagellar Assembly in <i>P. aeruginosa</i>	91
4.2.5	Environmental/Nonflagellar Regulators of Flagellar Expression	92
4.2.6	Posttranslational Modification of Flagellin	93
4.2.6.1	Flagellar Glycosylation Islands (GIs) in <i>P. aeruginosa</i>	93
4.2.6.2	Polymorphism of the <i>P. aeruginosa</i> a-type GI	94
4.2.7	Role of Flagella in Inflammation	95
4.2.8	Role of Flagellum in Pathogenesis	95
4.3	Pili of <i>P. aeruginosa</i>	96

4.3.1	Structure of <i>P. aeruginosa</i> Pilus	97
4.3.2	Pilus/Fimbrial Genes of <i>P. aeruginosa</i>	97
4.3.3	Regulation of Pilus Assembly and Twitching Motility	99
4.3.4	Assembly of Type IV Pili	100
4.3.5	Pilin Classification	100
4.3.5.1	Type IV a and b Pilins	100
4.3.5.2	Group I–V Pilins	101
4.3.6	Pseudopilins	101
4.3.7	Chaperone–Usher Pathways	101
4.3.8	<i>flp–tad–rcp</i> Gene Cluster	102
4.3.9	Posttranslational Modifications of Pilin	103
4.3.10	Role of Pili in Pathogenesis	103
4.4	Conclusions	104
	References	104
5	<i>Pseudomonas</i> Motility and Chemotaxis	109
	<i>Junichi Kato</i>	
5.1	Introduction	109
5.2	Chemotaxis Assay Methods	109
5.3	Ecological Aspects of Chemotaxis	112
5.3.1	Host–Microbe Interactions	112
5.3.2	Nitrogen Cycle	113
5.3.3	Bioremediation and Chemotaxis Toward Environmental Pollutants	113
5.4	Molecular Biology of Chemotaxis in <i>Pseudomonas</i>	114
5.4.1	Molecular Mechanism of Bacterial Chemotaxis	114
5.4.2	MCPs in <i>Pseudomonas</i>	115
5.4.3	Che Proteins in <i>Pseudomonas</i>	123
5.4.4	Polar Localization of MCPs and Che Proteins	124
5.5	<i>Pseudomonas</i> as Model Microorganisms for Chemotaxis Research	125
	References	126
6	Iron Transport and Signaling in <i>Pseudomonads</i>	129
	<i>Francesco Imperi, Karla A. Mettrick, Matt Shirley, Federica Tiburzi, Richard C. Draper, Paolo Visca and Iain L. Lamont</i>	
6.1	Introduction	129
6.2	Siderophores Used by <i>Pseudomonads</i>	131
6.2.1	Chemical Diversity of Siderophores	131
6.2.2	Endogenous Siderophores of <i>Pseudomonads</i>	133
6.2.2.1	Pyoverdines	133
6.2.2.2	Pyochelin	134
6.2.2.3	Other Endogenous Siderophores	134
6.2.3	Exogenous Siderophores Utilized by <i>Pseudomonads</i>	135
6.2.3.1	Enterobactin	135
6.2.3.2	Desferrioxamines	136
6.2.3.3	Ferrichromes	136

6.2.3.4	Aerobactin	136
6.2.3.5	Citrate	136
6.3	Siderophore Synthesis	136
6.3.1	Nonribosomal Peptide Synthesis	136
6.3.2	Pyoverdine Biosynthetic Pathways	137
6.3.3	Synthesis of other <i>Pseudomonas</i> Siderophores	141
6.4	Ferri-Siderophore Transport	142
6.4.1	Overview	142
6.4.2	Outer Membrane Ferri-Siderophore Receptors	142
6.4.3	TonB Complex	144
6.4.4	Transport of Ferri-Siderophores into the Periplasm	145
6.4.5	Iron Transport Across the Cytoplasmic Membrane	146
6.5	Regulation of Siderophore Synthesis and Transport	146
6.5.1	Fur Protein as Master Repressor	146
6.5.2	ECF σ Factors	148
6.5.3	QS and Expression of Iron Transport Genes	149
6.6	Introduction to Signaling	150
6.6.1	Pyoverdine-Mediated Signaling	150
6.6.1.1	FpvA and Pyoverdine	150
6.6.1.2	Transfer of Signal: Role of FpvR	151
6.6.2	Pyochelin: An Alternative Signaling Mechanism	152
6.6.3	Enterobactin	153
6.6.4	Multiplicity of Heterologous Siderophore Signaling Systems in <i>Pseudomonads</i>	154
6.7	Concluding Remarks and Future Perspectives	154
	References	156
7	Quorum Sensing in <i>Pseudomonads</i>	167
	<i>S.P. Diggle, S. Heeb, J.F. Dubern, M.P. Fletcher, S.A. Crusz, P. Williams, and M. Cámara</i>	
7.1	Introduction to Quorum Sensing	167
7.2	AHL QS in <i>Pseudomonas aeruginosa</i>	168
7.3	AHL-Dependent QS in Other <i>Pseudomonads</i>	172
7.4	AHQ-Dependent QS in <i>Pseudomonads</i>	174
7.4.1	Regulation and Biosynthesis of AHQs	175
7.4.2	Function of AHQs in <i>P. aeruginosa</i>	176
7.4.3	AHQs in Other <i>Pseudomonads</i>	178
7.5	Gac/Rsm System in <i>Pseudomonads</i>	178
7.5.1	Gac/Rsm as the Principal QS System	179
7.5.2	Gac/Rsm as a QS Fine-tuning System	180
7.6	QS and Infection	182
7.6.1	Role of QS in the Pathogenesis of <i>P. aeruginosa</i> Infections	182
7.6.2	Evidence for QS <i>In vivo</i>	182
7.6.3	QS and Biofilms in <i>P. aeruginosa</i>	183
7.6.4	QS Molecules and the Host	185

7.6.5	Disruption of QS Represents a Novel Approach for Managing <i>P. aeruginosa</i> Infections	186
7.7	Conclusions	187
	References	188
8	Regulatory Networks in <i>Pseudomonas aeruginosa</i>: Role of Cyclic-di(3',5')-Guanylic Acid	195
	<i>Ute Römling and Susanne Häussler</i>	
8.1	Introduction – The History of Cyclic-di(3',5')-Guanylic Acid Detection	195
8.2	Principles of c-di-GMP Signaling	196
8.2.1	Transition between Motility and Sessility	196
8.2.2	Di-guanylate Cyclases	198
8.2.3	Phosphodiesterases	198
8.2.4	Principle Concepts of c-di-GMP Signaling	199
8.3	GGDEF and EAL Domain Proteins in <i>P. aeruginosa</i>	199
8.4	c-di-GMP Signaling in Biofilm Formation	199
8.5	c-di-GMP Signaling in Fimbrial Biogenesis	202
8.6	c-di-GMP Signaling in Exopolysaccharide Production	203
8.7	c-di-GMP Signaling and Motility	203
8.8	c-di-GMP Signaling in the Formation of Small Colony Variants	204
8.9	c-di-GMP Signaling in Virulence	205
8.10	c-di-GMP-Binding Proteins in <i>P. aeruginosa</i>	206
8.11	Perspectives	207
	References	208
9	<i>Pseudomonas aeruginosa</i>: A Model for Biofilm Formation	215
	<i>Diane McDougald, Janosch Klebensberger, Tim Tolker-Nielsen, Jeremy S. Webb, Tim Conibear, Scott A. Rice, Sylvia M. Kirov, Carsten Matz, and Staffan Kjelleberg</i>	
9.1	Introduction	215
9.2	Biofilm Development	216
9.2.1	Early Attachment and Colonization Events	217
9.2.1.1	Translocation and Attachment to Surfaces	217
9.2.1.2	Role of Flagella and Fimbriae in Reversible and Irreversible Attachment	218
9.2.2	Extracellular Matrix	219
9.2.2.1	Polysaccharide	219
9.2.2.2	Protein	220
9.2.2.3	DNA	221
9.2.3	Phenotypic and Genotypic Diversification in <i>Pseudomonas</i> Biofilms	223
9.2.3.1	Ecological and Genetic Causes of Diversity in <i>Pseudomonas</i> Biofilms	223
9.2.3.2	Colony Morphology Variation in <i>P. Aeruginosa</i> Biofilms	224

9.2.3.3	GacS Sensor Kinase	224
9.2.3.4	Bacteriophage and SCVs	225
9.2.4	Biofilm Dispersal	226
9.2.4.1	Role of c-di-GMP in Dispersal	226
9.2.4.2	Denitrification, Nitric Oxide and Dispersal in <i>P. aeruginosa</i>	226
9.2.4.3	Microcolony-based Biofilm Dispersal	228
9.3	Regulatory Mechanisms of <i>P. aeruginosa</i> Biofilms	229
9.3.1	c-di-GMP	229
9.3.1.1	c-di-GMP Regulation of SCVs	230
9.3.1.2	Autoaggregation and c-di-GMP	231
9.3.1.3	Motility	231
9.3.1.4	Environmental Stimuli and Targets of c-di-GMP Signaling	232
9.3.2	QS and <i>P. aeruginosa</i> Biofilms	233
9.3.2.1	Effect of Nutrient on QS Regulation of Biofilm Formation	233
9.3.2.2	QS, Central Metabolism and Biofilm Gradients	235
9.3.2.3	QS and Chronic Infection	236
9.4	Biofilm/Eukaryote Interactions	237
9.4.1	Clinical <i>P. aeruginosa</i> Biofilm Infections	237
9.4.1.1	Chronic Lung Infections in CF	237
9.4.1.2	Conversion to Mucoidy and Anaerobic Growth	238
9.4.1.3	Phenotypic and Genotypic Analyses of <i>P. aeruginosa</i> in CF Infection	239
9.4.2	Similarities Across <i>P. aeruginosa</i> Biofilm-Host Interactions	241
9.4.2.1	Interactions with Host Immune Cells	241
9.4.2.2	Interactions with Free-living Protozoa	242
9.4.2.3	Interactions with Fungi	243
9.5	Future Perspectives	244
	References	246
10	Bacteriophages of <i>Pseudomonas</i>	255
	<i>Kirsten Hertveldt and Rob Lavigne</i>	
10.1	Introduction	255
10.1.1	Bacteriophage Propagation Cycle	255
10.1.1.1	Temperate versus Lytic Phages	255
10.1.1.2	Lytic Infection Cycle	256
10.1.2	Phage Classification	259
10.1.3	Phages of <i>Pseudomonas</i> Spp.	259
10.1.4	Applications of <i>Pseudomonas</i> Bacteriophages	263
10.2	<i>Pseudomonas</i> Phage Representatives	263
10.2.1	Introduction	263
10.2.1.1	Tailed Phages	264
10.2.1.2	Tailless Phages	264
10.2.2	<i>Pseudomonas</i> -Infecting Myoviridae	264
10.2.2.1	Phage ϕ CTX	264
10.2.2.2	Giant Virulent <i>Pseudomonas</i> Phages	265

10.2.3	<i>Pseudomonas</i> -Infecting <i>Siphoviridae</i>	268
10.2.3.1	D3112/B3-like <i>Pseudomonas</i> Phages	268
10.2.3.2	Bacteriophage D3	272
10.2.4	<i>Pseudomonas</i> -Infecting <i>Podoviridae</i>	275
10.2.4.1	gh-1: A T7-Like Member of the <i>Podoviridae</i>	275
10.2.4.2	ϕ KMV-Like Viruses	277
10.2.4.3	<i>Pseudomonas</i> Phage PaP3	278
10.2.4.4	<i>Pseudomonas</i> Phage F116	279
10.2.5	<i>Pseudomonas</i> -Infecting <i>Leviviridae</i>	279
10.2.6	<i>Pseudomonas</i> -Infecting <i>Cystoviridae</i>	282
10.2.6.1	Bacteriophage ϕ 6	282
10.2.6.2	Bacteriophages ϕ 8, ϕ 12 and ϕ 13	283
10.2.7	<i>Pseudomonas</i> -Infecting <i>Inoviridae</i>	284
10.2.7.1	Introduction	284
10.2.7.2	Phages Pf1 and Pf3	285
10.2.8	Prophage Sequences in <i>Pseudomonas</i> Bacterial Chromosomes	286
	References	286
11	<i>Pseudomonas</i> Plasmids	293
	<i>Christopher M. Thomas, Anthony S. Haines, Irina A. Kosheleva, and Alexander Boronin</i>	
11.1	Introduction	293
11.2	Plasmid Groups in <i>Pseudomonas</i>	294
11.3	Defining Characteristics of <i>Pseudomonas</i> Plasmids	303
11.4	Isolation of Plasmids	304
11.5	Use of PCR Primers and Associated Probes for <i>Pseudomonas</i> Plasmids	306
11.6	Plasmid Replication	306
11.7	Plasmid Maintenance	309
11.8	Determinants of Incompatibility	312
11.9	Determinants of Host Range	313
11.10	Plasmid Transfer	316
11.11	Phenotypic Cargo of <i>Pseudomonas</i> Plasmids	318
11.12	Conclusions	319
	References	320
12	Biosynthesis and Regulation of Phenazine Compounds in <i>Pseudomonas</i> spp.	331
	<i>Dmitri V. Mavrodí, Linda S. Thomashow, and Wulf Blankenfeldt</i>	
12.1	Introduction	331
12.2	Diversity of Phenazine Compounds Produced by <i>Pseudomonas</i> spp	331
12.3	Biosynthesis of Phenazines and Evolution of Pathways	333
12.3.1	Core Biosynthetic Pathway and Assembly of the Phenazine Scaffold	333

- 12.3.2 Phenazine-Modifying Genes 337
- 12.3.3 Evolution of Phenazine Pathways 338
- 12.4 Regulation of Phenazine Production in *Pseudomonas* Spp. 339
- 12.4.1 Phenazine Biosynthesis and N-Acyl-Homoserine Lactone (Acyl-HSL)-Based Quorum Sensing (QS) 339
- 12.4.2 Global Regulation 340
- 12.5 Biological Activity and Role of Phenazine Compounds from *Pseudomonas* Spp. 340
- 12.5.1 Spectrum of Biological Activity of Phenazines 340
- 12.5.2 Mode of Action and Mechanisms of Self-Defense 341
- 12.5.3 Redox Homeostasis and Other Physiological Roles 343
- 12.6 Conclusions 344
- References 344
- 13 *Pseudomonas*–Plant Interactions 353**
S.H. Miller, G.L. Mark, A. Franks, and F. O’Gara
- 13.1 Introduction 353
- 13.2 Beneficial *Pseudomonas*–Plant Interactions 354
- 13.2.1 Biocontrol 358
- 13.2.2 ISR 359
- 13.2.3 Biofertilization 359
- 13.2.4 Phytostimulation 360
- 13.2.5 Rhizoremediation 361
- 13.3 *Pseudomonas*–Plant Signaling 362
- 13.3.1 Plant Root Exudates 362
- 13.3.2 Plant-Derived Signals and Bacterial Gene Expression 364
- 13.3.3 N-Acyl-Homoserine Lactone (AHL) Signaling 364
- 13.3.4 Pathogen-Associated Molecular Patterns (PAMPs) 366
- 13.4 Current and Future Prospects for the Study of *Pseudomonas*–Plant Interactions 367
- 13.4.1 Transcriptomics 367
- 13.4.2 Proteomics 367
- 13.4.3 Metabolomics 368
- 13.4.4 *In Situ* Analysis of *Pseudomonas*–Plant Interactions 368
- 13.4.5 Plant-Beneficial Microbial Consortia 369
- 13.5 Conclusions 370
- References 370
- 14 Biotechnological Relevance of Pseudomonads 377**
