

TABLE OF CONTENTS

ACKNOWLEDGEMENTS-----	iii
TABLE OF CONTENTS-----	iv
LIST OF FIGURES-----	viii
LIST OF TABLES-----	x
ABSTRACT-----	xi
Introduction-----	1
Chapter (I) Literature Review-----	4
1. Anthocyanins -----	5
1.1. General aspects -----	5
1.2. Biosynthetic pathway of anthocyanins -----	7
1.3. Health benefits associated with anthocyanin consumption -----	9
2. Anthocyanin Chemistry -----	10
2.1. Structure of anthocyanins -----	10
2.2. Colour -----	11
2.2.1. Effect of structure -----	11
2.2.2. Effect of pH -----	12
2.2.3. Effect of Sulphur Dioxide -----	14
2.2.4. Self Association -----	15

2.2.5. Copigmentation-----	16
3. Antioxidant activity -----	18
3.1. Free radicals -----	18
3.2. Production of free radicals in biological systems -----	19
3.3. Oxidation -----	20
3.3.1. Lipid autooxidation -----	20
3.3.2. Photosensitised oxidation -----	21
3.4. Antioxidants -----	23
3.4.1. The role of antioxidants -----	23
3.4.2. Classification of antioxidants -----	24
3.4.3. Mechanisms of action -----	24
3.4.3.1. Scavenging of free radicals -----	24
3.4.3.2. Quenching of singlet excited states -----	25
3.4.3.3. Chelating of transition metals -----	25
3.4.3.4. Inactivation/ Activation of enzymes -----	25
3.4.3.5. Synergism -----	25
3.5. Assays involved in the determination of antioxidant activity -----	25
3.5.1. Screening of antioxidant activity using the DPPH method -----	26
3.6. Anthocyanins as antioxidants -----	27

Chapter (III) Results and Discussion-----	41
1. General aspects -----	41
2. Anthocyanin content -----	41
3. Evaluation of the antioxidant activity of red grape extracts -----	74
3.1. Free radical scavenging method (DPPH [•])-----	48
4. Antioxidant properties: contribution of total anthocyanin content -----	51
5. Antioxidant properties: contribution of individual anthocyanins -----	52
5.1. Effect of principal anthocyanins -----	52
6. General discussion -----	53
Chapter (V) Conclusions -----	57
Chapter (IV) References -----	59
