CHAPTER 1: Introduction and General Considerations 1

Introduction	1
Integration of Biochemistry with Clinical Medicine	2
General Considerations	2
The Human Body and Organ Systems	2
The Cell	5
Cell Membrane	6
Nucleus	9
Cytoplasm	18
Receptors and Their Cellular Locations	26
Biological Roles of Water	27
Ion Channels	28
pH	30
Further Reading	32

CHAPTER 2: Proteins 33

Prion Disease: A Fatal Protein Conformation	33
Propagation of PrP ^{Sc} from PrP ^C in the Cell	35
Amino Acids	39
Chirality	44
Amino Acids Have Two or More Potential Charges	46
Synthesis and Degradation of Amino Acids	50
Proteins	54
Amino Acid Sequence	56
Secondary Structure	57
Further Reading	92

CHAPTER 3: Enzymes 93

Clinical Enzymology in Diagnosis of Disease 93

Enzymes Are Catalytic Proteins 96

Kinetics 97

The Michaelis-Menten Equation 99

Enzyme Inhibition 101

Allosterism 105

Classification 107

Coenzymes 112

Prosthetic Groups 119

Drugs and Enzymes 125

Further Reading 129

CHAPTER 4: Carbohydrates 131

Diabetes: A Prevalent Disease That Disrupts Glucose

Utilization 131

Insulin 138

The Pancreatic Beta Cell 142

Effects of Diabetes 145

Simple Sugars 146

Starch 153

Glycogen 154

Breakdown of Glycogen for Energy Use (Glycogenolysis) 156

Glycogen Synthesis 162

Effects of Hormones on Glycogen Breakdown and Synthesis 163

Glycogen Storage Diseases 169

Is Type 2 Diabetes a Disease of Protein Aggregation? 170

Use of Glucose for Energy 173

Glycerol Can Be Converted to Glucose 182

Glycoproteins 182

Blood Group Proteins 185

Lactose Intolerance 188

Glycobiology 188

Further Reading 188

CHAPTER 5: Lipids 189

Hypercholesterolemia: A Disease in Which Serum Cholesterol
Is Not Properly Imported at the Cellular Level 189

Biosynthesis of Cholesterol 193

Synthesis of Bile Acids 193

Prognosis 198

Fatty Acids and Fat 198

Fatty Acid Oxidation 202

Activation and Transport of Fatty Acids into Mitochondria	206
Lipid Metabolism and Hormonal Control	207
Phospholipids	220
Glycosphingolipids	226
Lipoproteins	233
Lipid Anchoring of Proteins to Membranes	236
Further Reading	238

CHAPTER 6: Nucleic Acids and Molecular Genetics 239

Huntington's Disease: A Trinucleotide Repeat Mutation	239
Purines and Pyrimidines	244
Base-Pairing	249
Biosynthesis of Purines and Pyrimidines and Their Catabolism	252
Purine Interconversions	268
Purine and Pyrimidine Nucleotide Catabolism	271
Disorders of Purine and Pyrimidine Metabolism	283
Biosynthesis of Deoxyribonucleic Acids	288
Mutations and Damage to DNA	298
Specific Nucleases: Restriction Enzymes	300
Natural Genomic DNA	305
Sequencing DNA	308
Inhibition of DNA Synthesis	311
Functional Genomics	312
Gene Therapy	314
Ribonucleic Acids	316
Further Reading	322

CHAPTER 7: Transcription 323

Asbestosis: A Disease of Aberrant Transcription	323
Transcription Factors and Transcription Complex	329
Coactivators and Corepressors	337
The Glucocorticoid Receptor as a Model Transcription Factor	349
Chromatin	357
Further Reading	363

CHAPTER 8: Polypeptide Hormones 365

Panhypopituitarism: A Malfunction of the Hypothalamus-Pituitary-End Organ Axis	365
Humoral Mechanism	367

Posterior Pituitary	380
Actions of Releasing Hormones and Anterior Pituitary Hormones	387
CRH—ACTH—Cortisol Pathway	387
Growth Hormone—Releasing Hormone—Growth Hormone—Bodily Growth Path	392
Gonadotropins	406
Thyrotropin	417
Prolactin	430
Gastrointestinal Hormones	435
Further Reading	444

CHAPTER 9: Steroid Hormones 445

Stress: A State That Can Have Serious Pathological Consequences	445
Adrenal Medulla	448
Adrenal Cortex	452
Aldosterone	452
Cortisol	467
Dehydroepiandrosterone	474
Steroid Hormone Structures	476
Unliganded Forms of Receptors and Mechanism of Activation	478
Ligands and Receptor Conformation: The Sex Hormones	483
Peroxisome Proliferators and Orphan Receptors	488
Programmed Cell Death [Apoptosis] Induced by Glucocorticoids	491
Further Reading	496

CHAPTER 10: Metabolism 497

Hyperammonemia and Disruptions of the Urea Cycle	497
Excess Ammonium Ion and Urea in the Blood Can Be Lethal	497
The Urea Cycle	499
Nitrogen Flow, Amino, and Amide Group Transfers in Amino Acid Metabolism	503
Transamination	508
Transamidation	512
Deamination	513
Amino Acid Oxidation	514
Amino Acid Decarboxylation	516
Metabolism of Specific Amino Acids to Key Substances	517
Methionine	517

Phenylalanine and Tyrosine	521
Formation of Catecholamines	524
Formation of Melanin	527
Tryptophan	532
Arginine	536
Histidine	541
Glutamate	544
Serine	545
Catabolism of Amino Acids	546
Metabolism of Lipids	554
Glucagon	559
Fatty Acid Degradation	560
Fat as Storage Energy	561
Lipid and Carbohydrate Metabolism Are Jointly Regulated	565
Steroid Hormone Metabolism	566
Nucleic Acid Metabolism	570
DNA Damage and Repair	573
Cell Death	575
Carbohydrate Metabolism	577
Regulation of Blood Glucose Level	581
Overview	585
Further Reading	586

CHAPTER 11: Growth Factors and Cytokines 587

New Approaches to Ovarian Cancer, Such as the Action of TRAIL (TNF-Related Apoptosis-Inducing Ligand) Might Form the Basis of a Treatment	587
TNF Superfamily	594
Growth Factors	600
Epidermal Growth Factor	604
Transforming Growth Factor	612
Fibroblast Growth Factor	616
Nerve Growth Factor	623
Colony-Stimulating Factor	627
Erythropoietin	633
Interferon- γ	638
Insulin-like Growth Factors	643
Interleukins	654
Further Reading	683

CHAPTER 12: Membrane Transport 685

Cystic Fibrosis: A Genetic Disease Involving Aberrant Ion Transport 685

Types of Membrane Transport 695

Absorption of Large Molecules 695

Exocytosis 695

Passive Diffusion or Osmosis 697

Energy-Requiring Transport: Active Transport 702

Simple and Coupled Transporters 704

Ions and Gradients 706

How Do Magnesium and Other Divalent Ions Enter Cells? 713

Proton (H^+) Transport 714

Amino Acid Transporters 720

Fatty Acid Uptake 723

Sodium Conductance and Voltage-Gated Sodium Channels 729

Multidrug Resistance Channel (MDR) of the ABC Transporter Superfamily 732

Blood-Brain Barrier 734

Further Reading 737

CHAPTER 13: Dietary Metals, Iron, Micronutrients, and Nutrition 739

Iron-Deficiency Anemia 739

Ingestion and Uptake of Iron 743

Heme Synthesis 753

Formation of Hemoglobin 760

Dietary Metals 764

Copper 764

Selenium 773

Zinc 776

Magnesium 780

Calcium: A Micronutrient 783

Molybdenum 788

Iodine: A Micronutrient 795

Vitamins 801

Water-Soluble Vitamins 801

Fat-Soluble Vitamins 835

The Diet 849

Protein Nutrition 849

Herbs and Nutraceuticals 852

Further Reading 852

CHAPTER 14: Blood and Lymphatic System 853

Deep Vein Thrombosis: A Major Health Problem 853

The Blood-Clotting Mechanism 864

Blood 871

Transport of Oxygen 871

Carbon Dioxide 878

Blood Cells 879

Blood Proteins 884

Blood Type and Rh 888

Lymphatic System 894

Further Reading 898

CHAPTER 15: Immunobiochemistry 899

The Surveillance System and Cancer 899

Types of Antibodies 910

Polyclonal and Monoclonal Antibodies 915

Opsonization 917

Antibody Formation 917

Autoimmunity 920

Graves' Disease 920

MHC Involvement 922

Theory on the Development of Type I Diabetes (Insulin-Dependent Diabetes Mellitus) 930

Complement System 933

Regulators of Complement Pathways 942

Properdin 949

C-Reactive Protein 951

Further Reading 953

CHAPTER 16: Neurobiochemistry 955

Pain: A Constant Health Problem 955

Substance P 962

Opioids and Morphine 968

Anandamide 974

Excitatory Amino Acids 988

The Classical Neurotransmitters 1004

Catecholamines and Monoamines 1027

Characteristics of the Brain 1044

Further Reading 1046

CHAPTER 17: Microbial Biochemistry 1047

AIDS: A Deadly Viral Disease	1047
Other Viruses of Current Interest	1068
Human Rhinoviruses	1072
Influenza Viruses	1072
West Nile Virus	1076
Severe Acute Respiratory Syndrome	1078
Bacteriophage	1089
A Bacterial Cell, <i>E. coli</i>	1107
Diseases Caused by <i>E. coli</i>	1147
Further Reading	1151

Appendices

Appendix 1: Abbreviations of the Common Amino Acids	1153
Appendix 2: The Genetic Code	1155
Base Pairing	1155
Appendix 3: Weights and Measures	1157

Glossary	1159
Index	1177
