

CONTENTS

PART I : STRUCTURE AND FUNCTION OF BIOMACROMOLECULE /1

Chapter 1 Structure and Function of Protein /1

SECTION 1 THE COMPOSITION OF PROTEIN /2

- 1.1 Amino acid /2
- 1.2 Peptide /5
- 1.3 Some small polypeptides have biological activity /6

SECTION 2 MOLECULAR STRUCTURE OF PROTEINS /7

- 2.1 Primary structure /7
- 2.2 Secondary structure /7
- 2.3 Tertiary structure /11
- 2.4 Major noncovalent bond /12
- 2.5 Quaternary structure /13

SECTION 3 RELATION BETWEEN STRUCTURE AND FUNCTION OF PROTEINS /14

- 3.1 Primary structure and potential function of protein /14
- 3.2 Spatial structure shows the function of protein /15

SECTION 4 CHEMICAL AND PHYSICAL PROPERTIES OF PROTEINS /19

- 4.1 Ultraviolet absorption spectrum of protein /19
- 4.2 Isoelectric point (pI) /19
- 4.3 Denaturation of protein /20

SECTION 5 ISOLATION, PURIFICATION AND SEQUENCING OF PROTEINS /21

- 5.1 Dialysis and ultrafiltration /21
- 5.2 Precipitation with acetone, salting precipitation and immunoprecipitation /21
- 5.3 Chromatographic separations /23
- 5.4 Electrophoresis /24
- 5.5 Ultracentrifugation /26

SUMMARY /27

Chapter 2 Chemistry of Nucleic Acids /29

SECTION 1 MOLECULAR COMPOSITION OF NUCLEIC ACIDS /30

1.1 Basic components /30

1.2 Nucleosides /32

1.3 Mononucleotides /32

SECTION 2 MOLECULAR STRUCTURES OF DNA /33

2.1 Primary structure of nucleic acid /33

2.2 Chargaff's rules /34

2.3 Secondary structure of DNA /35

SECTION 3 PHYSICO-CHEMICAL PROPERTIES OF NUCLEIC ACIDS /37

3.1 Viscosity /37

3.2 Ultraviolet absorption /37

3.3 Denaturation and renaturation of DNA /37

3.4 Hydrolysis of acid or alkali /40

SECTION 4 STRUCTURES OF RNA /40

4.1 Messenger RNA /40

4.2 Transfer RNA /41

4.3 Ribosomal RNA /42

SUMMARY /44

Chapter 3 Enzymes /45

SECTION 1 THE MOLECULAR COMPOSITION AND FUNCTION OF
ENZYMES /46

1.1 The molecular composition of enzymes /46

1.2 The active center of enzymes /47

1.3 Many enzymes require cofactors /48

SECTION 2 PROPERTIES AND MECHANISM OF ENZYME CATALYSIS /50

2.1 Remarkable properties of enzymes /50

2.2 Mechanism of enzyme catalysis /52

SECTION 3 THE KINETICS OF ENZYME CATALYSIS /54

3.1 Catalysis occurs at the active site /54

3.2 Multiple factors affect the rates of enzyme-catalyzed reactions /57

3.3 Initial rate is proportionate to enzyme concentration /59

3.4 Substrate concentration affects reaction rate /59

3.5 The Michaelis-Menten equations model the effects of substrate concentration /60

3.6 Kinetic analysis distinguishes competitive from noncompetitive inhibition /62

SECTION 4 ZYMOGENS AND ISOZYMES /65

4.1 Zymogens and zymogen activation /65

4.2 Isozymes are physically distinct forms of the same catalytic activity /66

SECTION 5 THE NAME AND CLASSIFICATION OF ENZYMES /68
 SECTION 6 THE QUANTITATIVE ANALYSIS OF CERTAIN PLASMA ENZYMES IS
 OF DIAGNOSTIC SIGNIFICANCE /69

6.1 Low levels of nonfunctional plasma enzymes result from normal destruction of cells /69

6.2 Nonfunctional plasma enzymes aid diagnosis and prognosis /69

SUMMARY /70

PART II : METABOLISM /73

Chapter 4 Metabolism of Carbohydrate /73

SECTION 1 DIGESTION OF DIETARY CARBOHYDRATES /74

SECTION 2 GLYCOLYSIS /75

2.1 Concept of glycolysis /75

2.2 Glycolytic pathway /75

2.3 Regulation of glycolysis /79

2.4 Lactate metabolism /82

SECTION 3 THE PYRUVATE DEHYDROGENASE COMPLEX AND THE CITRIC
 ACID CYCLE /83

3.1 The pyruvate dehydrogenase complex /83

3.2 Regulation of the PDH complex /84

3.3 Reactions of the tricarboxylic acid cycle /85

SECTION 4 PENTOSE PHOSPHATE PATHWAY /90

4.1 Reactions of the pentose phosphate pathway /90

4.2 The functions of this pathway /93

4.3 Erythrocytes and the pentose phosphate pathway /94

4.4 Pentose phosphate pathway with disease /94

SECTION 5 GLYCOGEN METABOLISM /95

5.1 Glycogen synthesis /95

5.2 Glycogenolysis /97

5.3 The functions of glycogenesis and glycogenolysis /99

SECTION 6 GLUCONEOGENESIS /99

6.1 Gluconeogenesis /100

6.2 Regulation of gluconeogenesis /103

SECTION 7 REGULATION OF BLOOD SUGAR LEVELS /104

SUMMARY /105

Chapter 5 Biological Oxidation /107

SECTION 1 THE WAY OF OXIDATION /107

1.1 Addition of oxygen /107

1.2 Removal of electrons /107

1.3	Dehydrogenation	/108
SECTION 2 RESPIRATORY CHAIN /108		
2.1	The composition of respiratory chains	/110
2.2	Two capital kinds of respiratory chains	/113
2.3	Oxidative phosphorylation	/121
2.4	Factors of influence on oxidative phosphorylation	/129
2.5	Shuttle systems are required for mitochondrial oxidation of cytosolic NADH	/132
SUMMARY /134		
Chapter 6 Lipid Metabolism /136		
SECTION 1 DIGESTION AND ABSORPTION OF LIPIDS /137		
SECTION 2 BLOOD LIPIDS AND LIPOPROTEINS /138		
2.1	The composition and content of blood lipoprotein	/138
2.2	The classification of lipoproteins	/140
SECTION 3 INTERMEDIATE METABOLISM OF TRIACYLGLYCEROLS /141		
3.1	Hydrolysis of triacylglycerols in adipose tissue	/142
3.2	Oxidation of fatty acids	/143
3.3	Fatty acid synthesis	/148
3.4	Biosynthesis of triacylglycerol	/150
SECTION 4 METABOLISM OF PHOSPHOLIPIDS /152		
SECTION 5 CHOLESTEROL METABOLISM /154		
5.1	Biosynthesis of cholesterol	/155
5.2	Transformation and excretion of cholesterol	/156
SUMMARY /157		
Chapter 7 Amino Acid Metabolism /159		
SECTION 1 NUTRITION OF PROTEINS /159		
1.1	Nutrition of the proteins	/159
1.2	Nitrogen balance and protein requirements	/160
1.3	The biosynthetic pathways of amino acids	/161
SECTION 2 DIGESTION AND ABSORPTION OF PROTEINS /162		
2.1	Protein turnover occurs in all forms of life	/162
2.2	Proteases and peptidases degrade proteins to amino acids	/163
SECTION 3 AMINO ACID CATABOLISM /165		
3.1	Overall view	/165
3.2	Deamination of amino acids	/165
3.3	Metabolism of the carbon skeletons of amino acids	/168
SECTION 4 METABOLISM OF AMMONIA /170		
4.1	Sources and disposals of blood ammonia	/170
4.2	Transport of ammonia	/170
4.3	Inter-organ exchange maintains circulating levels of amino acids	/172

- 4.4 Biosynthesis of urea /172
- 4.5 Metabolic disorders are associated with each reaction of the urea cycle /176

SECTION 5 CONVERSION OF AMINO ACIDS TO SPECIALIZED PRODUCTS /178

- 5.1 Glycine participates in biosynthesis of glycine conjugates, creatine, heme, and purines /178
- 5.2 α -Alanine is a major plasma amino acid /179
- 5.3 Mammals catabolize β -alanine via malonate semialdehyde /179
- 5.4 S-adenosylmethionine provides methyl groups for biosynthesis /179
- 5.5 Urinary sulfate derives from cysteine /180
- 5.6 Decarboxylation of histidine forms histamine /180
- 5.7 Ornithine and hence arginine form polyamines /180
- 5.8 Tryptophan forms serotonin /182
- 5.9 Melanins are polymers of tyrosine catabolites /184
- 5.10 Creatinine excretion is a function of muscle mass /186
- 5.11 Formation and catabolism of γ -aminobutyrate /186

SUMMARY /187

Chapter 8 Nucleotide Metabolism /189

SECTION 1 METABOLISM OF PURINE NUCLEOTIDES /190

- 1.1 Biosynthesis of purine nucleotides /190
- 1.2 Degradation of purines leads to uric acid /194
- 1.3 Clinical significances of purine metabolism /195

SECTION 2 METABOLISM OF PYRIMIDINE NUCLEOTIDES /196

- 2.1 Pyrimidine nucleotide biosynthesis /196
- 2.2 Salvage pathways of pyrimidine /199
- 2.3 Clinical significances of pyrimidine metabolism /200

SUMMARY /201

PART III: GENE EXPRESSING /203

Chapter 9 DNA Replication /203

SECTION 1 PROKARYOTIC DNA SYNTHESIS /204

- 1.1 Separation of the two complementary DNA strands /205
- 1.2 Formation of the replication fork /205
- 1.3 Direction of DNA replication /207
- 1.4 RNA primer /208
- 1.5 Chain elongation /209
- 1.6 Excision of RNA primers and their replacement by DNA polymerase I /211
- 1.7 DNA ligase /213

SECTION 2 EUKARYOTIC DNA REPLICATION /213

- 2.1 The eukaryotic cell cycle /213

2.2	Eukaryotic DNA polymerases	/214
2.3	Telomerase	/214
2.4	Reverse transcriptase	/215
2.5	Inhibition of DNA synthesis by nucleoside analogs	/216
2.6	Organization of eukaryotic DNA	/216
SECTION 3 DNA REPAIR /218		
3.1	Strand-directed mismatch repair system	/218
3.2	Repair of damage caused by ultraviolet light	/219
3.3	Correction of base alterations	/219
3.4	Repair of double-strand breaks	/220
SUMMARY /221		
Chapter 10 RNA Synthesis /223		
SECTION 1 TEMPLATES AND ENZYMES /225		
1.1	Asymmetric transcription	/225
1.2	DNA-dependent RNA polymerase	/225
SECTION 2 THE PROCESS OF TRANSCRIPTION /227		
2.1	Initiation	/228
2.2	Elongation	/232
2.3	Termination	/233
2.4	Action of antibiotics	/234
SECTION 3 POST TRANSCRIPTIONAL MODIFICATION OF RNA /235		
3.1	mRNA processing	/236
3.2	Ribosomal RNAs and tRNAs also undergo processing	/241
3.3	tRNA processing	/242
SUMMARY /243		
Chapter 11 Protein Synthesis /245		
SECTION 1 GENETIC CODE /246		
1.1	Codon	/247
1.2	Characteristics of the genetic code	/248
1.3	Consequences of altering the nucleotide sequence	/249
SECTION 2 COMPONENTS REQUIRED FOR TRANSLATION /249		
2.1	Amino acids	/250
2.2	Transfer RNA	/250
2.3	Aminoacyl-tRNA synthases	/251
2.4	Messenger RNA	/251
2.5	Functionally competent ribosomes	/251
2.6	Protein factors	/252
2.7	ATP and GTP are required as sources of energy	/252
SECTION 3 THE PROCESS OF PROTEIN SYNTHESIS /253		

3.1 Activation of amino acids: Formation of aminoacyl-tRNA /253

3.2 The process of translation /254

3.3 Polysomes /260

SECTION 4 POSTTRANSLATIONAL MODIFICATION OF POLYPEPTIDE CHAIN /261

4.1 Trimming /261

4.2 Covalent alterations /262

4.3 Clinical relatives in protein synthesis /263

SECTION 5 REGULATION AND CONTROL OF GENE EXPRESSION /265

5.1 Gene control in prokaryotes /266

5.2 Gene control in eukaryotes /269

SUMMARY /270

PART IV: SPECIAL TOPICS /273

Chapter 12 Biochemistry of Liver /273

SECTION 1 THE STRUCTURAL FEATURE OF LIVER /273

SECTION 2 THE IMPORTANT ROLE OF LIVER IN MATERIAL METABOLISM /274

2.1 Carbohydrate metabolism /275

2.2 Protein metabolism /275

2.3 Lipid metabolism /276

2.4 Storage and filtering of blood /276

2.5 Removal of used hormones and cholesterol from the blood /276

2.6 Making bile salts /276

2.7 Destruction of any bacteria, bowel toxins and so on /277

SECTION 3 FUNCTIONS OF BIOTRANSFORMATION OF LIVER /277

3.1 Hydroxylation /278

3.2 Reduction reaction /280

3.3 Lytic response /280

3.4 Conjugation reactions /280

SECTION 4 METABOLISMS OF BILE ACID /282

4.1 Primary bile acids and biosynthesis of bile acids /283

4.2 Secondary bile acids and enterohepatic circulation of the bile salts /284

4.3 Regulation of bile acid synthesis /285

4.4 Clinical significance of bile acid synthesis /285

SECTION 5 METABOLISMS OF BILE PIGMENTS /286

5.1 Catabolism of heme /287

5.2 The liver takes up bilirubin /289

5.3 Hyperbilirubinemia causes jaundice /290

SUMMARY /292

Chapter 13	Biochemistry of Blood	/293
SECTION 1	PLASMA PROTEINS	/293
1.1	The composition of blood	/293
1.2	The blood has many functions	/294
1.3	Plasma contains a complex mixture of proteins	/294
SECTION 2	RED BLOOD CELLS	/300
2.1	Metabolic characteristics of mature erythrocytes	/300
2.2	Biosynthesis of heme	/303
SUMMARY		/307
Chapter 14	Recombinant DNA Technology	/309
SECTION 1	DNA CLONING	/309
1.1	Cutting and joining DNA	/310
1.2	Vectors	/313
1.3	Transformation	/315
1.4	Screening	/315
SECTION 2	CLONING A GENE	/317
2.1	Genomic library	/317
2.2	cDNA library	/318
2.3	PCR	/320
2.4	Chemical synthesis	/325
SECTION 3	IDENTIFYING DNA SEQUENCE	/325
3.1	Probes	/325
3.2	Gel electrophoresis	/326
3.3	Nucleic acid hybridization	/327
3.4	DNA sequencing	/329
SECTION 4	MANIPULATING GENE EXPRESSION	/330
4.1	Expression of cloned genes in bacteria	/330
4.2	Expression of cloned genes in eukaryotic host cells	/332
4.3	Protein purification	/334
4.4	Alterations in cloned genes produce	/335
SECTION 5	MEDICAL APPLICATIONS OF RECOMBINANT DNA TECHNOLOGY	/336
5.1	The analysis of gene variations	/336
5.2	Gene therapy	/337
5.3	Transgenic animals	/338
SUMMARY		/338
The Confer of Special Term with Frequently Used		/340
