

CONTENTS

<i>Preface</i>	<i>v</i>
<i>Introduction and Historical Account</i>	<i>xi</i>
1. History, Scope and Importance of Biosystematics	1
2. Biosystematics in the Framework of Evolution	11
3. Relationships of Orthodox Taxonomy and Biosystematics	21
4. Biosystematics-Biosystematic Categories	27
5. Population Size and Density Variation in Individuals	47
6. Variation in Individuals and Populations	57
7. Geographic Variability	63
8. Transplant Experiments	71
9. Speciation	83
10. Polyploids, Abrupt Speciation and Catastrophic Selection	103
11. Leaky Isolation Barrier, Gene Flow and Selection	113
12. Isolation Mechanisms	119
13. Breeding Systems	125
14. Recent Trends in Plant Systematics, Anatomy, Palynology, Cytology, Phytochemistry, Numerical Taxonomy, Molecular Taxonomy	137
15. Self Incompatibility	203
16. The Role of Hybridization and Evolution in Taxonomy	221
17. Modern Theory of Evolution	239
<i>Glossary</i>	253
<i>Bibliography</i>	269
<i>Index</i>	297
