

# Brief Contents

|                                                                              |                                                                     |
|------------------------------------------------------------------------------|---------------------------------------------------------------------|
| <b>CHAPTER 1</b>                                                             | <b>CHAPTER 15</b>                                                   |
| The Main Themes of Microbiology 1                                            | Adaptive, Specific Immunity and Immunization 452                    |
| <b>CHAPTER 2</b>                                                             | <b>CHAPTER 16</b>                                                   |
| The Chemistry of Biology 27                                                  | Disorders in Immunity 486                                           |
| <b>CHAPTER 3</b>                                                             | <b>CHAPTER 17</b>                                                   |
| Tools of the Laboratory: Methods of Studying Microorganisms 58               | Procedures for Identifying Pathogens and Diagnosing Infections 517  |
| <b>CHAPTER 4</b>                                                             | <b>CHAPTER 18</b>                                                   |
| A Survey of Prokaryotic Cells and Microorganisms 89                          | The Gram-Positive and Gram-Negative Cocci of Medical Importance 539 |
| <b>CHAPTER 5</b>                                                             | <b>CHAPTER 19</b>                                                   |
| A Survey of Eukaryotic Cells and Microorganisms 123                          | The Gram-Positive Bacilli of Medical Importance 569                 |
| <b>CHAPTER 6</b>                                                             | <b>CHAPTER 20</b>                                                   |
| An Introduction to Viruses 158                                               | The Gram-Negative Bacilli of Medical Importance 599                 |
| <b>CHAPTER 7</b>                                                             | <b>CHAPTER 21</b>                                                   |
| Microbial Nutrition, Ecology, and Growth 185                                 | Miscellaneous Bacterial Agents of Disease 627                       |
| <b>CHAPTER 8</b>                                                             | <b>CHAPTER 22</b>                                                   |
| An Introduction to Microbial Metabolism: The Chemical Crossroads of Life 217 | The Fungi of Medical Importance 659                                 |
| <b>CHAPTER 9</b>                                                             | <b>CHAPTER 23</b>                                                   |
| Microbial Genetics 254                                                       | The Parasites of Medical Importance 686                             |
| <b>CHAPTER 10</b>                                                            | <b>CHAPTER 24</b>                                                   |
| Genetic Engineering: A Revolution in Molecular Biology 291                   | Introduction to Viruses That Infect Humans: The DNA Viruses 723     |
| <b>CHAPTER 11</b>                                                            | <b>CHAPTER 25</b>                                                   |
| Physical and Chemical Agents for Microbial Control 319                       | The RNA Viruses That Infect Humans 747                              |
| <b>CHAPTER 12</b>                                                            | <b>CHAPTER 26</b>                                                   |
| Drugs, Microbes, Host—The Elements of Chemotherapy 351                       | Environmental Microbiology 784                                      |
| <b>CHAPTER 13</b>                                                            | <b>CHAPTER 27</b>                                                   |
| Microbe-Human Interactions: Infection and Disease 386                        | Applied and Industrial Microbiology 807                             |
| <b>CHAPTER 14</b>                                                            |                                                                     |
| An Introduction to Host Defenses and Innate Immunities 424                   |                                                                     |
