

TABLE OF CONTENTS

••

Preface ix

A Visual Guide to *Genetics: Analysis and Principles* xviii

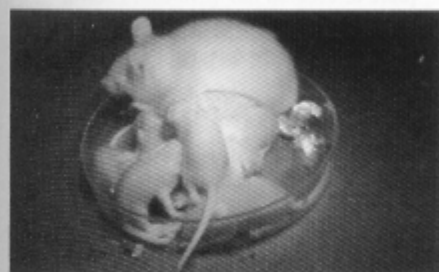

PART I

INTRODUCTION 1

1

OVERVIEW OF GENETICS 1

- 1.1 The Relationship Between Genes and Traits 3
- 1.2 Fields of Genetics 10
- Problem Sets & Insights 13

PART II

PATTERNS OF INHERITANCE 17

2

MENDELIAN INHERITANCE 17

- 2.1 Mendel's Laws of Inheritance 18

Experiment 2A 21

Mendel followed the outcome of a single trait for two generations

Experiment 2B 25

Mendel also analyzed crosses involving two different traits

2.2 Probability and Statistics 31

Conceptual Summary 36

Experimental Summary 37

Problem Sets & Insights 37

3

REPRODUCTION AND CHROMOSOME TRANSMISSION 45

- 3.1 General Features of Chromosomes 46
- 3.2 Cellular Division 49
- 3.3 Sexual Reproduction 55
- 3.4 The Chromosome Theory of Inheritance and Sex Chromosomes 61

Experiment 3A 65

Morgan's experiments showed a connection between a genetic trait and the inheritance of a sex chromosome in *Drosophila*

Conceptual Summary 68

Experimental Summary 69

Problem Sets & Insights 69

4

EXTENSIONS OF MENDELIAN INHERITANCE 75

- 4.1 Inheritance Patterns of Single Genes 76

Experiment 4A 82

Certain genes exhibit a gene dosage effect

- 4.2 Gene Interactions 89

Experiment 4B 91

Bridges observed an 8:4:3:1 ratio because the cream-eye allele can modify the eosin-eye allele but not the red or white alleles

Conceptual Summary 92

Experimental Summary 93

Problem Sets & Insights 93

5

LINKAGE AND GENETIC MAPPING IN EUKARYOTES 101

- 5.1 Linkage and Crossing Over 102

Experiment 5A 107

Creighton and McClintock correlated crossing over that produced new combinations of alleles with the exchange of homologous chromosomes

- 5.2 Genetic Mapping in Plants and Animals 112

Experiment 5B 115

Alfred Sturtevant used the frequency of crossing over in dihybrid crosses to produce the first genetic map

- 5.3 Genetic Mapping in Haploid Eukaryotes 120

Conceptual Summary 126

Experimental Summary 126

Problem Sets & Insights 127

6

GENETIC TRANSFER AND MAPPING IN BACTERIA AND BACTERIOPHAGES 137

- 6.1 Genetic Transfer and Mapping in Bacteria 138

Experiment 6A 143

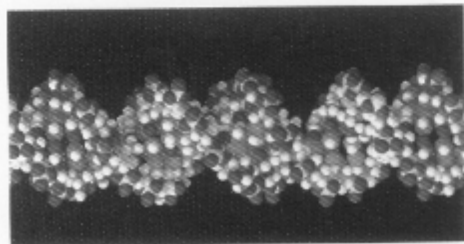

Conjugation experiments can be used to map genes along the *E. coli* chromosome

6.2 Intragenic Mapping in Bacteriophages 151**Conceptual Summary 158****Experimental Summary 159****Problem Sets & Insights 159****7****NON-MENDELIAN INHERITANCE 165****7.1 Maternal Effect 166****7.2 Epigenetic Inheritance 168****Experiment 7A 170**

In adult female mammals, one X chromosome has been permanently inactivated

7.3 Extranuclear Inheritance 178**Conceptual Summary 185****Experimental Summary 186****Problem Sets & Insights 186****8****VARIATION IN CHROMOSOME STRUCTURE AND NUMBER 193****8.1 Variation in Chromosome Structure 194****Experiment 8A 198**

A gene duplication produced the bar-eye phenotype in *Drosophila*

8.2 Variation in Chromosome Number 207**8.3 Natural and Experimental Ways to Produce Variations in Chromosome Number 213****Conceptual Summary 221****Experimental Summary 221****Problem Sets & Insights 221****PART III****MOLECULAR STRUCTURE AND REPLICATION OF THE GENETIC MATERIAL 227****9****MOLECULAR STRUCTURE OF DNA AND RNA 227****9.1 Identification of DNA as the Genetic Material 228****Experiment 9A 230**

Hershey and Chase provided evidence that the genetic material injected into the bacterial cytoplasm is T2 phage DNA

9.2 Nucleic Acid Structure 234**Experiment 9B 238**

Chargaff found that DNA has a biochemical composition in which the amount of A equals T and the amount of G equals C

Conceptual Summary 248**Experimental Summary 248****Problem Sets & Insights 249****10****CHROMOSOME ORGANIZATION AND MOLECULAR STRUCTURE 253****10.1 Viral Genomes 254****10.2 Bacterial Chromosomes 255****10.3 Eukaryotic Chromosomes 259****Experiment 10A 261**

Highly repetitive DNA can be separated from the rest of the chromosomal DNA by equilibrium density centrifugation

Experiment 10B 266

The repeating nucleosome structure is revealed by digestion of the linker region

Conceptual Summary 274**Experimental Summary 275****Problem Sets & Insights 275****11****DNA REPLICATION 279****11.1 Structural Overview of DNA Replication 280****Experiment 11A 281**

Three different models were proposed that described the net result of DNA replication

11.2 Bacterial DNA Replication 284**Experiment 11B 293**

DNA replication can be studied in vitro

11.3 Eukaryotic DNA Replication 297**Conceptual Summary 301****Experimental Summary 301****Problem Sets & Insights 302****PART IV****MOLECULAR PROPERTIES OF GENES 307****12****GENE TRANSCRIPTION AND RNA MODIFICATION 307****12.1 Overview of Transcription 308****12.2 Transcription in Bacteria 310****12.3 Transcription in Eukaryotes 314****12.4 RNA Modification 318****Experiment 12A 321**

Introns were experimentally identified via microscopy

Conceptual Summary 327**Experimental Summary 327****Problem Sets & Insights 328****13****TRANSLATION OF mRNA 333****13.1 The Genetic Basis for Protein Synthesis 334****Experiment 13A 338**

Synthetic RNA helped to decipher the genetic code

13.2 Structure and Function of tRNA 344**Experiment 13B 346**

Translation depends on the recognition between the codon in mRNA and the anticodon in tRNA

13.3 Ribosome Structure and Assembly 351**13.4 Stages of Translation 354**

Conceptual Summary	362
Experimental Summary	363
Problem Sets & Insights	363

14 GENE REGULATION IN BACTERIA AND BACTERIOPHAGES 369

14.1 Transcriptional Regulation	370
---------------------------------	-----

Experiment 14A 375

The *lacI* gene encodes a diffusible repressor protein

14.2 Translational and Posttranslational Regulation	385
14.3 Gene Regulation in the Bacteriophage Life Cycle	386
Conceptual Summary	392
Experimental Summary	392
Problem Sets & Insights	393

15 GENE REGULATION IN EUKARYOTES 399

15.1 Regulatory Transcription Factors	400
15.2 Changes in Chromatin Structure	407

Experiment 15A 408

DNase-I sensitivity can be used to study changes in chromatin structure

15.3 Regulation of RNA Processing and Translation	417
Conceptual Summary	426
Experimental Summary	427
Problem Sets & Insights	427

16 GENE MUTATION AND DNA REPAIR 433

16.1 Consequences of Mutation	434
16.2 Occurrence and Causes of Mutation	440

Experiment 16A 445

X-rays were the first environmental agent shown to cause induced mutations

16.3 DNA Repair	450
Conceptual Summary	456
Experimental Summary	456
Problem Sets & Insights	456

17 RECOMBINATION AND TRANSDUCTION AT THE MOLECULAR LEVEL 461

17.1 Sister Chromatid Exchange and Homologous Recombination	462
---	-----

Experiment 17A 462

The staining of harlequin chromosomes can reveal recombination between sister chromatids

17.2 Site-Specific Recombination	470
17.3 Transposition	472

Experiment 17B 473

McClintock found that chromosomes of corn plants contain loci that can move

Conceptual Summary	483
Experimental Summary	483
Problem Sets & Insights	484

PART V

GENETIC TECHNOLOGIES 489

18 RECOMBINANT DNA TECHNOLOGY 489

18.1 Gene Cloning	490
-------------------	-----

Experiment 18A 495

In the first gene cloning experiment, Cohen, Chang, Boyer, and Helling inserted a *kanamycin^r* gene into a plasmid vector

18.2 Detection of Genes and Gene Products	505
18.3 Analysis and Alteration of DNA Sequences	511

Conceptual and Experimental Summary	515
-------------------------------------	-----

Problem Sets & Insights	516
-------------------------	-----

19 BIOTECHNOLOGY 521

19.1 Uses of Microorganisms in Biotechnology	522
--	-----

Experiment 19A 522

Somatostatin was the first human peptide hormone produced by recombinant bacteria

19.2 New Methods for Genetically Manipulating Plants and Animals	528
19.3 Applications of Transgenic Plants and Animals	537
19.4 DNA Fingerprinting	540
19.5 Human Gene Therapy	543
Conceptual and Experimental Summary	546
Problem Sets & Insights	546

20 STRUCTURAL GENOMICS 551

20.1 Cytogenetic and Linkage Mapping	552
--------------------------------------	-----

Experiment 20A 560

RFLP analysis can be used to follow the inheritance of disease-causing alleles

20.2 Physical Mapping	564
Conceptual and Experimental Summary	571
Problem Sets & Insights	572

21 FUNCTIONAL GENOMICS, PROTEOMICS, AND BIOINFORMATICS 577

21.1 Functional Genomics	578
--------------------------	-----

Experiment 21A 581

The coordinate regulation of many genes is revealed by a DNA microarray analysis

21.2 Proteomics	585
21.3 Bioinformatics	588
Conceptual and Experimental Summary	599
Problem Sets & Insights	600

PART VI

GENETIC ANALYSIS OF INDIVIDUALS AND POPULATIONS 605

22

MEDICAL GENETICS AND CANCER 605

- 22.1 Genetic Analysis of Human Diseases 606
22.2 Genetic Basis of Cancer 614

Experiment 22A 616

DNA isolated from malignant mouse cells can transform normal mouse cells into malignant cells

- Conceptual Summary 626
Experimental Summary 627
Problem Sets & Insights 627

23

DEVELOPMENTAL GENETICS 633

- 23.1 Invertebrate Development 634

Experiment 23A 644

Heterochronic mutations disrupt the timing of developmental changes in *C. elegans*

- 23.2 Vertebrate Development 647
23.3 Plant Development 650
23.4 Sex Determination in Animals and Plants 654
Conceptual Summary 658
Experimental Summary 658
Problem Sets & Insights 659

24

QUANTITATIVE GENETICS 665

- 24.1 Quantitative Traits 666
24.2 Polygenic Inheritance 670

Experiment 24A 673

Polygenic inheritance explains DDT resistance in *Drosophila*

- 24.3 Heritability 676

Experiment 24B 679

Heritability of dermal ridge count in human fingerprints is very high

- Conceptual Summary 686
Experimental Summary 687
Problem Sets & Insights 687

25

POPULATION GENETICS 695

- 25.1 Genes in Populations 696
25.2 The Hardy-Weinberg Equilibrium 698
25.3 Factors That Change Allele Frequencies in Populations 701

Experiment 25A 711

Industrial melanism in the moth *Biston betularia* is a modern example of natural selection

- Conceptual Summary 715
Experimental Summary 715
Problem Sets & Insights 716

26

EVOLUTIONARY GENETICS 723

- 26.1 Origin of Species 724

Experiment 26A 729

Müntzing was able to re-create an allotetraploid species

- 26.2 Evolution at the Molecular Level 733

Experiment 26B 739

Scientists can examine the relationships between living and extinct flightless birds by analyzing ancient DNA and then comparing DNA sequences

- Conceptual Summary 745
Experimental Summary 745
Problem Sets & Insights 746

Appendix

- Experimental Techniques 751

Solutions to Even-Numbered Problems 759
