Preface iv
Guided Tour vi
Acknowledgments xiii
Supplements xvi

1 Biology, the Study of Life 2

Fire Ants Have a Good Defense 2

Organisms Are Characterized by Diversity and Unity 4

- 1.1 Life is diverse 4
- 1.2 Life has many levels of organization 4
- 1.3 Organisms share the same characteristics of life 6

Classification Helps Us Understand Diversity 8

- 1.4 Taxonomists group organisms according to evolutionary relationships 8

The Biosphere Is Organized 10

- 1.5 The biosphere is divided into ecosystems 10
- 1.6 Most of the biosphere's ecosystems are now threatened 10

Scientists Observe, Hypothesize, and Test 11

- 1.7 The natural world is studied by using scientific methods 11
- 1.8 Control groups allow for comparison of results 12
- 1.9 *How Biology Impacts Our Lives* DNA barcoding of life may become a reality 14

PART I Organisms Are Composed of Cells 18

2 Basic Chemistry and Cells 18

Life Depends on Water 18

All Matter Is Composed of Chemical Elements 20

- 2.1 Six elements are basic to life 20
- 2.2 Atoms contain subatomic particles 21
- 2.3 *How Biology Impacts Our Lives* Radioactive isotopes have many medical uses 22

Atoms React with One Another to Form Molecules 23

- 2.4 After atoms react, they have a completed outer shell 23
- 2.5 An ionic bond occurs when electrons are transferred 24
- 2.6 A covalent bond occurs when electrons are shared 25
- 2.7 A covalent bond can be nonpolar or polar 26

- 2.8 A hydrogen bond can occur between polar molecules 26

The Properties of Water Benefit Life 27

- 2.9 Water molecules stick together: Cohesion 27
- 2.10 Water warms up and cools down slowly 28
- 2.11 Water dissolves other polar substances 28
- 2.12 Frozen water is less dense than liquid water 29

Living Things Require a Narrow pH Range 30

- 2.13 Acids and bases affect living things 30
- 2.14 The pH scale measures acidity and basicity 31
- 2.15 Buffers help keep the pH of body fluids relatively constant 31
- 2.16 *How Biology Impacts Our Lives* Acid deposition has many harmful effects 32

3 Organic Molecules and Cells 36

Plants and Animals Are the Same but Different 36

The Diversity of Organic Molecules Makes Life Diverse 38

- 3.1 The chemistry of carbon makes diverse molecules possible 38
- 3.2 Functional groups add to the diversity of organic molecules 39
- 3.3 Molecular subunits can be linked to form macromolecules 40

Carbohydrates Are Energy Sources and Structural Components 41

- 3.4 Simple carbohydrates provide quick energy 41
- 3.5 Complex carbohydrates store energy and provide structural support 42

Lipids Provide Storage, Insulation, and Other Functions 43

- 3.6 Fats and oils are rich energy-storage molecules 43
- 3.7 Other lipids have structural, hormonal, or protective functions 44

Proteins Have a Wide Variety of Vital Functions 45

- 3.8 Proteins are the most versatile of life's molecules 45
- 3.9 Each protein is a sequence of particular amino acids 45
- 3.10 The shape of a protein is necessary to its function 47

Nucleic Acids Are Information Molecules 48

- 3.11 The nucleic acids DNA and RNA carry coded information 48

- 3.12 *How Biology Impacts Our Lives* The Human Genome Project may lead to new disease treatments 49
- 3.13 The nucleotide ATP is the cell's energy carrier 50

4 Structure and Function of Cells 54

Cells: What Are They? 54

Cells Are the Basic Units of Life 56

- 4.1 All organisms are composed of cells 56
- 4.2 Metabolically active cells are small in size 57
- 4.3 *How Science Progresses* Microscopes allow us to see cells 58
- 4.4 Prokaryotic cells evolved first 59
- 4.5 Eukaryotic cells contain specialized organelles: An overview 60

Protein Synthesis Is a Major Function of Cells 62

- 4.6 The nucleus contains the cell's genetic information 62
- 4.7 The ribosomes carry out protein synthesis 63
- 4.8 The endoplasmic reticulum synthesizes and transports proteins and lipids 64
- 4.9 The Golgi apparatus modifies and repackages proteins for distribution 65
- 4.10 *How Science Progresses* Pulse-labeling allows observation of the secretory pathway 65

Vesicles and Vacuoles Have Varied Functions 66

- 4.11 Lysosomes digest macromolecules and cell parts 66
- 4.12 Peroxisomes break down long-chain fatty acids 66
- 4.13 Vacuoles have varied functions in protists and plants 66
- 4.14 The organelles of the endomembrane system work together 67

A Cell Carries Out Energy Transformations 68

- 4.15 Chloroplasts capture solar energy and produce carbohydrates 68
- 4.16 Mitochondria break down carbohydrates and produce ATP 68
- 4.17 *How Biology Impacts Our Lives* Malfunctioning mitochondria can cause human diseases 69

The Cytoskeleton Maintains Cell Shape and Assists Movement 70

- 4.18 The cytoskeleton consists of filaments and microtubules 70
- 4.19 Cilia and flagella contain microtubules 71

In Multicellular Organisms, Cells Join Together 72

- 4.20 Modifications of cell surfaces influence their behavior 72

5 Dynamic Activities of Cells 76

Life's Energy Comes from the Sun 76

Living Things Transform Energy 78

- 5.1 Energy makes things happen 78
- 5.2 Two laws apply to energy and its use 79
- 5.3 Cellular work is powered by ATP 80

- 5.4 ATP breakdown is coupled to energy-requiring reactions 81

Enzymes Speed Chemical Reactions 82

- 5.5 Enzymes speed reactions by lowering activation barriers 82
- 5.6 An enzyme's active site is where the reaction takes place 82
- 5.7 Enzyme speed is affected by local conditions 83
- 5.8 Enzymes can be inhibited noncompetitively and competitively 84
- 5.9 *How Biology Impacts Our Lives* Enzyme inhibitors can spell death 84

The Plasma Membrane Has Many and Various Functions 85

- 5.10 The plasma membrane is a phospholipid bilayer with embedded proteins 85
- 5.11 Proteins in the plasma membrane have numerous functions 86
- 5.12 *How Biology Impacts Our Lives* Malfunctioning plasma membrane proteins can cause human diseases 87

The Plasma Membrane Regulates the Passage of Molecules Into and Out of Cells 88

- 5.13 Simple diffusion across a membrane requires no energy 88
- 5.14 Facilitated diffusion requires a carrier protein but no energy 88
- 5.15 Osmosis can affect the size and shape of cells 89
- 5.16 Active transport requires a carrier protein and energy 90
- 5.17 Bulk transport involves the use of vesicles 90

6 Pathways of Photosynthesis 94

Color It Green 94

Photosynthesis Produces Food and Releases Oxygen 96

- 6.1 Photosynthesizers are autotrophs that produce their own food 96
- 6.2 In plants, chloroplasts carry out photosynthesis 97
- 6.3 Photosynthesis is a redox reaction that releases O₂ 98
- 6.4 *How Science Progresses* Experiments showed that the O₂ released by photosynthesis comes from water 98
- 6.5 Photosynthesis involves two sets of reactions: The light reactions and the Calvin cycle reactions 99

First, Solar Energy Is Captured 100

- 6.6 Light reactions begin: Solar energy is absorbed by pigments 100
- 6.7 *How Science Progresses* Fall temperatures cause leaves to change color 100

8 Cell Division and Reproduction 132

Cancer Is a Genetic Disorder 132

**Cell Division Ensures the Passage
of Genetic Information 134**

8.1 Cell division is involved in both asexual
and sexual reproduction 134

8.2 Prokaryotes reproduce asexually 135

**Somatic Cells Have a Cell Cycle and Undergo Mitosis
and Cytokinesis 136**

8.3 The eukaryotic cell cycle is a set series of
events 136

8.4 Eukaryotic chromosomes are visible during
cell division 137

8.5 Mitosis maintains the chromosome number 138

8.6 Cytokinesis divides the cytoplasm 140

Cancer Is Uncontrolled Cell Division 141

8.7 Cell cycle control occurs at checkpoints 141

8.8 Signals affect the cell cycle control system 142

8.9 Cancer cells have abnormal characteristics 143

8.10 *How Biology Impacts Our Lives* Protective
behaviors and diet help prevent cancer 144

**Meiosis Produces Cells That Become the Gametes
in Animals and Spores in Other Organisms 145**

8.11 Homologous chromosomes separate during
meiosis 145

8.12 Synapsis and crossing-over occur during
meiosis I 146

8.13 Sexual reproduction increases genetic
variation 146

8.14 Meiosis requires two division cycles 148

8.15 The life cycle of most multicellular organisms
includes both mitosis and meiosis 150

8.16 Meiosis can be compared to mitosis 151

Chromosomal Abnormalities Can Be Inherited 152

8.17 An abnormal chromosome number is
sometimes traceable to nondisjunction 152

8.18 Abnormal chromosome numbers cause
syndromes 153

8.19 Abnormal chromosome structure also causes
syndromes 154

9 Patterns of Genetic Inheritance 158

Inbreeding Leads to Disorders 158

Gregor Mendel Deduced Laws of Inheritance 160

9.1 A blending model of inheritance existed prior
to Mendel 160

9.2 Mendel designed his experiments well 160

**Single-Trait Crosses Reveal Units of Inheritance
and the Law of Segregation 162**

9.3 Mendel's law of segregation describes how
gametes pass on traits 162

- 6.8 Solar energy boosts electrons to a higher
energy level 101
- 6.9 Electrons release their energy as ATP forms 101
- 6.10 During the light reactions, electrons follow
a noncyclic pathway 102
- 6.11 The thylakoid membrane is organized
to produce ATP and NADPH 103

Second, Carbohydrate Is Synthesized 104

- 6.12 The Calvin cycle uses ATP and NADPH
from the light reactions to produce
a carbohydrate 104
- 6.13 In plants, carbohydrate is the starting point
for other molecules 105

**C₃, C₄, and CAM Photosynthesis Thrive Under
Different Conditions 106**

- 6.14 C₃ photosynthesis evolved when oxygen
was in limited supply 106
- 6.15 C₄ photosynthesis boosts CO₂ concentration
for RuBP carboxylase 106
- 6.16 CAM photosynthesis is another alternative
to C₃ photosynthesis 107
- 6.17 *How Science Progresses* Destroying tropical rain
forests contributes to global warming 108

7 Pathways of Cellular Respiration 112

ATP Is Universal 112

Glucose Breakdown Releases Energy 114

- 7.1 Cellular respiration is a redox reaction that
requires O₂ 114
- 7.2 Cellular respiration has four phases—three
phases occur in mitochondria 115

**Carbon Dioxide and Water Are Produced During
Glucose Breakdown 116**

- 7.3 Glycolysis: Glucose breakdown begins 116
- 7.4 The preparatory reaction occurs before the
citric acid cycle 118
- 7.5 The citric acid cycle: Final oxidation of glucose
products 119
- 7.6 The electron transport chain captures much
energy 120
- 7.7 The cristae create an H⁺ gradient that drives
ATP production 121
- 7.8 The ATP payoff can be calculated 122

Fermentation Is Inefficient 123

- 7.9 When oxygen is in short supply, the cell
switches to fermentation 123
- 7.10 *How Biology Impacts Our Lives* Fermentation
helps produce numerous food products 124

**Metabolic Pathways Cross at Particular
Substrates 125**

- 7.11 Organic molecules can be broken down
and synthesized as needed 125
- 7.12 *How Biology Impacts Our Lives* Exercise
burns fat 126

Biological Viewpoints Organisms Are Composed
of Cells 130

9.4 The units of inheritance are alleles of genes 163

Two-Trait Crosses Support the Law of Independent Assortment 164

- 9.5 Mendel's law of independent assortment describes inheritance of multiple traits 164
- 9.6 Mendel's results are consistent with the laws of probability 165
- 9.7 Testcrosses support Mendel's laws and indicate the genotype 166

Mendel's Laws Apply to Humans 167

- 9.8 Pedigrees can reveal the patterns of inheritance 167
- 9.9 Some human genetic disorders are autosomal recessive 168
- 9.10 Some human genetic disorders are autosomal dominant 169
- 9.11 *How Biology Impacts Our Lives* Genetic disorders may now be detected early on 170

Complex Inheritance Patterns Extend the Range of Mendelian Analysis 171

- 9.12 Incomplete dominance still follows the law of segregation 171
- 9.13 A gene may have more than two alleles 171
- 9.14 Several genes and the environment can influence a single multifactorial characteristic 172
- 9.15 One gene can influence several characteristics 173

Chromosomes Are the Carriers of Genes 174

- 9.16 Traits transmitted via the X chromosome have a unique pattern of inheritance 174
- 9.17 Humans have X-linked disorders 175
- 9.18 The genes on one chromosome form a linkage group 176
- 9.19 Frequency of recombinant gametes maps the chromosomes 176
- 9.20 *How Science Progresses* Thomas Hunt Morgan is commonly called "the fruit fly guy" 178

10 Molecular Biology of Inheritance 182

Arabidopsis Is a Model Organism 182

DNA Is the Genetic Material 184

- 10.1 DNA is a transforming substance 184
- 10.2 DNA, not protein, is the genetic material 184
- 10.3 DNA and RNA are polymers of nucleotides 186
- 10.4 DNA meets the criteria for the genetic material 187
- 10.5 DNA is a double helix 188

DNA Can Be Duplicated 190

- 10.6 DNA replication is semiconservative 190
- 10.7 Many different proteins help DNA replicate 191

Genes Specify the Makeup of Proteins 192

- 10.8 Genes are linked to proteins 192
- 10.9 The making of a protein requires transcription and translation 192
- 10.10 The genetic code for amino acids is a triplet code 193

- 10.11 During transcription, a gene passes its coded information to an mRNA 194
 - 10.12 In eukaryotes, an mRNA is processed before leaving the nucleus 195
 - 10.13 During translation, each transfer RNA carries a particular amino acid 196
 - 10.14 Translation occurs at ribosomes in cytoplasm 197
 - 10.15 Initiation begins the process of protein production 198
 - 10.16 Elongation builds a polypeptide one amino acid at a time 198
 - 10.17 Let's review gene expression 199
- ### **Mutations Are Changes in the Sequence of DNA Bases 200**
- 10.18 Mutations affect genetic information and expression 200
 - 10.19 *How Biology Impacts Our Lives* Many agents can cause mutations 201
 - 10.20 *How Science Progresses* Transposons are "jumping genes" 202

11 Regulation of Gene Activity 206

Moth and Butterfly Wings Tell a Story 206

Gene Expression Is Controlled in Prokaryotic Cells 208

- 11.1 DNA-binding proteins turn genes on and off in prokaryotes 208

Control of Gene Expression in Eukaryotes Causes Specialized Cells 209

- 11.2 Eukaryotic cells are specialized 209
- 11.3 Plants are cloned from a single cell 209
- 11.4 Animals are cloned using a donor nucleus 210
- 11.5 *How Biology Impacts Our Lives* Animal cloning has benefits and drawbacks 211

Control of Gene Expression Is Varied in Eukaryotes 212

- 11.6 Chromatin is highly condensed in chromosomes 212
- 11.7 The genes in highly condensed chromatin are not expressed 212
- 11.8 DNA-binding proteins regulate transcription in eukaryotes 213
- 11.9 mRNA processing can affect gene expression 214
- 11.10 Control of gene expression also occurs in the cytoplasm 214
- 11.11 Synopsis of gene expression control in eukaryotes 215

Gene Expression Is Controlled During Development 216

- 11.12 Genes are turned on sequentially during development 216
- 11.13 Homeotic genes and apoptosis occur in a wide range of animals 217

Genetic Mutations Cause Cancer 218

- 11.14 When cancer develops, two types of genes are out of control 218

- 11.15 Faulty gene products interfere with signal transduction when cancer develops 219
- 11.16 Cancer develops and becomes malignant gradually 220

12 Biotechnology and Genomics 224

Witnessing Genetic Engineering 224

DNA Can Be Cloned 226

- 12.1 Genes can be isolated and cloned 226
- 12.2 Specific DNA sequences can be cloned 227

Organisms Can Be Genetically Modified 228

- 12.3 Bacteria are modified to make a product or perform a service 228
- 12.4 *How Science Progresses* Making cheese—Genetic engineering comes to the rescue 228
- 12.5 Plants are genetically modified to increase yield or to produce a product 229
- 12.6 *How Biology Impacts Our Lives* Are genetically engineered foods safe? 230
- 12.7 Animals are genetically modified to enhance traits or obtain useful products 231
- 12.8 A person's genome can be modified 232
- 12.9 *How Science Progresses* Gene therapy trials have varying degrees of success 233

The Human Genome Can Be Manipulated 234

- 12.10 The human genome has been sequenced 234
- 12.11 *How Biology Impacts Our Lives* New cures are on the horizon 235
- 12.12 Proteomics and bioinformatics are new endeavors 236
- 12.13 Functional and comparative genomics 236
- Biological Viewpoints* Genes Control the Traits of Organisms 240

PART III Organisms Are Related and Adapted to Their Environment 242

13 Darwin and Evolution 242

The "Vice Versa" of Animals and Plants 242

Darwin Developed a Natural Selection Hypothesis 244

- 13.1 Darwin made a trip around the world 244
- 13.2 Others had offered ideas about evolution before Darwin 245
- 13.3 Artificial selection mimics natural selection 246
- 13.4 Darwin formulated natural selection as a mechanism for evolution 246
- 13.5 *How Science Progresses* Wallace independently formulated a natural selection hypothesis 247
- 13.6 *How Science Progresses* Natural selection can be witnessed 248

The Evidence for Evolution Is Strong 249

- 13.7 Fossils provide a record of the past 249
- 13.8 Fossils are evidence for common descent 250
- 13.9 Anatomic evidence supports common descent 251

- 13.10 Biogeographic evidence supports common descent 252
- 13.11 Molecular evidence supports common descent 252

Population Genetics Tells Us When Microevolution Occurs 253

- 13.12 A Hardy-Weinberg equilibrium is not expected 253
- 13.13 Both mutations and sexual recombination produce variations 254
- 13.14 Nonrandom mating and gene flow can contribute to microevolution 254
- 13.15 The effects of genetic drift are unpredictable 255
- 13.16 Natural selection can be stabilizing, directional, or disruptive 256
- 13.17 *How Biology Impacts Our Lives* Stabilizing selection helps maintain harmful alleles 258

14 Speciation and Evolution 262

Hybrid Animals Do Exist 262

Evolution of Diversity Requires Speciation 264

- 14.1 Species have been defined in more than one way 264
- 14.2 Reproductive barriers maintain genetic differences between species 266

Origin of Species Usually Requires

Geographic Separation 268

- 14.3 Allopatric speciation utilizes a geographic barrier 268
- 14.4 Adaptive radiation produces many related species 270

Origin of Species Can Occur in One Place 271

- 14.5 Speciation occasionally occurs without a geographic barrier 271
- 14.6 *How Science Progresses* Artificial selection produced corn 272

The Fossil Record Shows Both Gradual and Rapid Speciation 273

- 14.7 Speciation occurs at different tempos 273
- 14.8 *How Science Progresses* The Burgess Shale hosts a diversity of life 274

Developmental Genes Provide a Mechanism for Rapid Speciation 276

- 14.9 Gene expression can influence development 276
- Speciation Is Not Goal-Oriented 278**
- 14.10 Evolution is not directed toward any particular end 278

15 The History and Classification of Life on Earth 282

Motherhood Among Dinosaurs 282

The Fossil Record Reveals the History of Life on Earth 284

- 15.1 The geologic timescale is based on the fossil record 284

- 15.2 *How Science Progresses* The geologic clock can help put Earth's history in perspective 286
- 15.3 Continental drift has affected the history of life 286
- 15.4 Mass extinctions have affected the history of life 288

Systematics Traces Evolutionary Relationships 290

- 15.5 Organisms can be classified into categories 290
- 15.6 Linnaean classification reflects phylogeny 291
- 15.7 Certain types of data are used to trace phylogeny 292
- 15.8 Phylogenetic cladistics and evolutionary systematics use the same data differently 294

The Three-Domain Classification System Is Widely Accepted 296

- 15.9 This text uses the three-domain system of classifying organisms 296

16 Evolution of Microbial Life 300

At Your Service: Viruses and Bacteria 300

Viruses Reproduce in Living Cells 302

- 16.1 Viruses have a simple structure 302
- 16.2 Some viruses reproduce inside bacteria 302
- 16.3 *How Science Progresses* Viruses are responsible for a number of plant diseases 304
- 16.4 Viruses reproduce inside animal cells and cause diseases 305
- 16.5 The AIDS virus exemplifies RNA retroviruses 306
- 16.6 *How Biology Impacts Our Lives* Humans suffer from emerging viral diseases 307

The First Cells Originated on Early Earth 308

- 16.7 Experiments show how small organic molecules may have first formed 308
- 16.8 RNA may have been the first macromolecule 309
- 16.9 Protocells preceded the first true cells 310

Both Bacteria and Archaea Are Prokaryotes 311

- 16.10 Prokaryotes have particular structural features 311
- 16.11 Prokaryotes have a common reproductive strategy 312
- 16.12 How genes are transferred in bacteria 313
- 16.13 Prokaryotes have various means of nutrition 314
- 16.14 The cyanobacteria are ecologically important organisms 315
- 16.15 Some archaea live in extreme environments 316
- 16.16 *How Biology Impacts Our Lives* Prokaryotes have environmental and medical importance 317
- 16.17 *How Biology Impacts Our Lives* Disease-causing microbes can be biological weapons 318

17 Evolution of Protists 322

Protists Cause Disease Too 322

Protists May Represent the Oldest Eukaryotic Cells 324

- 17.1 Eukaryotic organelles probably arose by endosymbiosis 324
- 17.2 Protists are a diverse group 324
- 17.3 *How Science Progresses* How can the protists be classified? 326

Protozoans Are Heterotrophic Protists with Various Means of Locomotion 327

- 17.4 Protozoans called flagellates move by flagella 327
- 17.5 Protozoans called amoeboids move by pseudopods 328
- 17.6 Protozoans called ciliates move by cilia 329
- 17.7 Protozoans called sporozoans are not motile 330

Some Protists Have Moldlike Characteristics 331

- 17.8 The diversity of protists includes slime molds and water molds 331

Algae Are Photosynthetic Protists of Environmental Importance 332

- 17.9 The diatoms and dinoflagellates are significant algae in the oceans 332
- 17.10 Red algae and brown algae are multicellular 333
- 17.11 Green algae are ancestral to plants 334
- 17.12 *How Science Progresses* Life cycles among the algae have many variations 336

18 Evolution of Plants and Fungi 340

Some Plants Are Carnivorous 340

The Evolution of Plants Spans 500 Million Years 342

- 18.1 Evidence suggests that plants evolved from green algae 342
- 18.2 The evolution of plants is marked by four innovations 342
- 18.3 Plants have an alternation of generations life cycle 344
- 18.4 Sporophyte dominance was adaptive to a dry land environment 344

Plants Are Adapted to the Land Environment 346

- 18.5 Bryophytes are nonvascular plants in which the gametophyte is dominant 346
- 18.6 Ferns and their allies have a dominant vascular sporophyte 348
- 18.7 Most gymnosperms bear cones on which the seeds are "naked" 350
- 18.8 *How Biology Impacts Our Lives* Carboniferous forests became the coal we use today 352
- 18.9 Angiosperms are the flowering plants 353
- 18.10 The flowers of angiosperms produce "covered" seeds 354
- 18.11 *How Biology Impacts Our Lives* Flowering plants provide many services 356

Fungi Have Their Own Evolutionary History 358

- 18.12 Fungi differ from plants and animals 358
- 18.13 Fungi have mutualistic relationships with algae and plants 359
- 18.14 Fungi occur in three main groups 360
- 18.15 *How Biology Impacts Our Lives* Fungi have economic and medical importance 362

19 Evolution of Animals 366

The Secret Life of Bats 366

Key Innovations Distinguish Invertebrate Groups 368

- 19.1 Animals have distinctive characteristics 368
- 19.2 Animals most likely have a protistan ancestor 369
- 19.3 The traditional evolutionary tree of animals is based on seven key innovations 371
- 19.4 *How Science Progresses* Molecular data suggest a new evolutionary tree for animals 372
- 19.5 Some animal groups are invertebrates and some are vertebrates 373
- 19.6 Sponges are multicellular invertebrates 374
- 19.7 Cnidarians have true tissues 375
- 19.8 Free-living flatworms have bilateral symmetry 376
- 19.9 Some flatworms are parasitic 377
- 19.10 Roundworms have a pseudocoelom and a complete digestive tract 378
- 19.11 A coelom gives complex animal groups certain advantages 379
- 19.12 Molluscs have a three-part body plan 380
- 19.13 Annelids are the segmented worms 381
- 19.14 Arthropods have jointed appendages 382
- 19.15 Well known arthropods other than insects 383
- 19.16 Insects, the largest group of arthropods, are adapted to living on land 384
- 19.17 Echinoderms are radially symmetrical as adults 385

Further Innovations Allowed Vertebrates to Invade the Land Environment 386

- 19.18 Four features characterize chordates 386
- 19.19 Invertebrate chordates have a notochord as adults 386
- 19.20 The evolutionary tree of vertebrates is based on five key features 387
- 19.21 Jaws and lungs evolved among the fishes 388
- 19.22 Amphibians are tetrapods that can move on land 389
- 19.23 Reptiles have an amniotic egg and can reproduce on land 390
- 19.24 Birds have feathers and are endotherms 391
- 19.25 Mammals have hair and mammary glands 392
- 19.26 *How Biology Impacts Our Lives* Many vertebrates provide medical treatments for humans 394

20 Evolution of Humans 398

Lucy's Legacy 398

Humans Share Characteristics with All the Other Primates 400

- 20.1 Primates are adapted to live in trees 400
- 20.2 All primates evolved from a common ancestor 403

Humans Have an Upright Stance and Eventually a Large Brain 404

- 20.3 Early hominids could stand upright 404
- 20.4 Australopithecines had a small brain 406
- 20.5 *How Biology Impacts Our Lives* Origins of the genus *Homo* 407
- 20.6 Early *Homo* had a large brain 408
- 20.7 *How Science Progresses* Biocultural evolution began with *Homo* 409

***Homo sapiens* Is the Last Twig on the Primate Evolutionary Bush 410**

- 20.8 The Neandertal and Cro-Magnon people coexisted for 12,000 years 410
- 20.9 The particulars of *Homo sapiens* evolution are being studied 410
- 20.10 *How Science Progresses* Cro-Magnons made good use of tools 412
- 20.11 *How Science Progresses* Agriculture made modern civilizations possible 412

Today's Humans Belong to One Species 414

- 20.12 Humans have different ethnicities 414
- Biological Viewpoints* Organisms Are Related and Adapted to Their Environment 418

PART IV Plants Are Homeostatic 420

21 Plant Organization and Homeostasis 420

What Do Forests Have to Do with Global Warming? 420

Plants Have Three Vegetative Organs 422

- 21.1 Flowering plants typically have roots, stems, and leaves 422
- 21.2 Flowering plants are either monocots or eudicots 424
- 21.3 *How Biology Impacts Our Lives* Monocots serve humans well 425

The Same Plant Cells and Tissues Are Found in All Plant Organs 426

- 21.4 Plants have specialized cells and tissues 426
- 21.5 The three types of plant tissues are found in each organ 428

Plant Growth Is Either Primary or Secondary 430

- 21.6 Primary growth lengthens the root and shoot systems 430
- 21.7 Secondary growth widens roots and stems 432
- 21.8 *How Biology Impacts Our Lives* Wood has been a part of human history 433

Leaf Anatomy Facilitates Photosynthesis 434

21.9 Leaves are organized to carry on photosynthesis 434

Plants Maintain Internal Equilibrium 435

21.10 The organization of plants fosters homeostasis 435

21.11 Regulatory and other mechanisms help plants maintain homeostasis 435

22 Transport and Nutrition in Plants 440

Plants Can Adapt Too 440

Plants Are Organized to Transport Water and Solutes 442

22.1 Transport begins in both the leaves and the roots of plants 442

22.2 *How Science Progresses* Competition for resources is one aspect of biodiversity 443

Xylem Transport Depends on the Properties of Water 444

22.3 Water is pulled up in xylem by evaporation from leaves 444

22.4 Guard cells regulate water loss at leaves 446

22.5 *How Biology Impacts Our Lives* Plants can clean up toxic messes 447

Phloem Function Depends on Membrane Transport 448

22.6 Phloem carries organic molecules 448

22.7 The pressure-flow model explains phloem transport 448

Plants Require Good Nutrition and Therefore Good Soil 450

22.8 Certain nutrients are essential to plants 450

22.9 Roots are specialized for the uptake of water and minerals 452

22.10 Soil has distinct characteristics 453

22.11 Plants absorb minerals from the soil 453

22.12 Adaptations of plants help them acquire nutrients 454

23 Control of Growth and Responses in Plants 458

Recovering Slowly 458

Plant Hormones Regulate Plant Growth and Development 460

23.1 Hormones act by utilizing signal transduction pathways 460

23.2 Auxins promote growth and cell elongation 460

23.3 Gibberellins control stem elongation 462

23.4 Cytokinins stimulate cell division and differentiation 463

23.5 Absciscic acid suppresses growth of buds and closes stomata 464

23.6 Ethylene stimulates the ripening of fruits 465

Plants Respond to Environmental Stimuli 466

23.7 Plants have many ways of responding to their external environment 466

23.8 Tropisms occur when plants respond to stimuli 466

23.9 Turgor and sleep movements are complex responses 468

23.10 Flowering is a response to the photoperiod in some plants 470

23.11 Response to the photoperiod requires phytochrome 471

23.12 Plants respond to the biotic environment 472

23.13 *How Biology Impacts Our Lives* Eloy Rodriguez has discovered many medicinal plants 474

24 Reproduction in Plants 478

With a Little Help 478

Sexual Reproduction in Flowering Plants Is Suitable to the Land Environment 480

24.1 Plants have a sexual life cycle called alternation of generations 480

24.2 Pollination and fertilization bring gametes together during sexual reproduction 482

Seeds Contain a New Diploid Generation 484

24.3 A sporophyte embryo and its cotyledons develop inside a seed 484

24.4 The ovary becomes a fruit, which assists in sporophyte dispersal 485

24.5 With seed germination, the life cycle is complete 486

Plants Can Also Reproduce Asexually 487

24.6 Plants have various ways of reproducing asexually 487

24.7 Cloning of plants in tissue culture assists agriculture 488

Biological Viewpoints Plants Are Homeostatic 492

PART V Animals Are Homeostatic 494

25 Animal Organization and Homeostasis 494

Staying Warm, Staying Cool 494

The Structure of Tissues Suits Their Function 496

25.1 Levels of biological organization are evident in animals 496

Four Types of Tissues Are Common in the Animal Body 496

25.2 Epithelial tissue covers organs and lines body cavities 496

25.3 Connective tissue connects and supports other tissues 498

25.4 Muscular tissue is contractile and moves body parts 500

25.5 Nervous tissue communicates with and regulates the functions of the body's organs 501

25.6 *How Biology Impacts Our Lives* Will nerve regeneration reverse a spinal cord injury? 502

Organs, Composed of Tissues, Work Together in Organ Systems 503

25.7 Each organ has a specific structure and function 503

All Organ Systems Contribute to Homeostasis in Animals 504

- 25.8 Several organs work together to carry out the functions of an organ system 504
- 25.9 *How Science Progresses* Organs for transplant may come from various sources 506
- 25.10 Homeostasis is the constancy of the internal environment 507
- 25.11 Homeostasis is achieved through negative feedback mechanisms 508

26 Coordination by Neural Signaling 512

Getting a Head 512

Most Animals Have a Nervous System That Allows Responses to Stimuli 514

- 26.1 Invertebrates reflect an evolutionary trend toward bilateral symmetry and cephalization 514
- 26.2 Humans have well-developed central and peripheral nervous systems 516

Neurons Process and Transmit Information 517

- 26.3 Neurons are the functional units of a nervous system 517
- 26.4 Neurons have a resting potential across their membranes when they are not active 518
- 26.5 Neurons have an action potential across axon membranes when they are active 518
- 26.6 Propagation of an action potential is speedy 519
- 26.7 Communication between neurons occurs at synapses 520
- 26.8 Neurotransmitters can be stimulatory or inhibitory 520
- 26.9 Integration is a summing up of stimulatory and inhibitory signals 521
- 26.10 *How Biology Impacts Our Lives* Drugs that interfere with neurotransmitter release or uptake may be abused 522

The Vertebrate Central Nervous System (CNS) Consists of the Spinal Cord and Brain 524

- 26.11 The human spinal cord and brain function together 524
- 26.12 The cerebrum performs integrative activities 525
- 26.13 The other parts of the brain have specialized functions 526
- 26.14 The limbic system is involved in memory and learning as well as in emotions 527

The Vertebrate Peripheral Nervous System (PNS) Consists of Nerves 528

- 26.15 The peripheral nervous system contains cranial and spinal nerves 528
- 26.16 In the somatic system, reflexes allow us to respond quickly to stimuli 529

- 26.17 In the autonomic system, the parasympathetic and sympathetic divisions control the actions of internal organs 530

27 Sense Organs 534

The Eyes Have It 534

Sensory Receptors Respond to Stimuli 536

- 27.1 Sensory receptors can be divided into five categories 536
- 27.2 Sensory receptors communicate with the CNS 537

Chemoreceptors Are Sensitive to Chemicals 538

- 27.3 Chemoreceptors are widespread in the animal kingdom 538
- 27.4 Mammalian taste receptors are located in the mouth 538
- 27.5 Mammalian olfactory receptors are located in the nose 539

Photoreceptors Are Sensitive to Light 540

- 27.6 The vertebrate eye is a camera-type eye 540
- 27.7 *How Biology Impacts Our Lives* Protect your eyes from the sun 541
- 27.8 The lens helps bring an object into focus 541
- 27.9 *How Biology Impacts Our Lives* The inability to form a clear image can be corrected 542
- 27.10 The retina sends information to the visual cortex 542

Mechanoreceptors Are Involved in Hearing and Balance 544

- 27.11 The mammalian ear has three main regions 544
- 27.12 Hair cells in the inner ear detect sound vibrations 545
- 27.13 *How Biology Impacts Our Lives* Protect your ears from loud noises 546
- 27.14 The sense of balance occurs in the inner ear 546
- 27.15 *How Biology Impacts Our Lives* Motion sickness can be disturbing 548
- 27.16 Other animals respond to motion 548

28 Locomotion and Support Systems 552

Skeletal Remains Reveal All 552

Animal Skeletons Support, Move, and Protect the Body 554

- 28.1 Animal skeletons can be hydrostatic, external, or internal 554
- 28.2 Mammals have an endoskeleton that serves many functions 555

The Mammalian Skeleton Is a Series of Bones Connected at Joints 556

- 28.3 The bones of the axial skeleton lie in the midline of the body 556
- 28.4 The appendicular skeleton consists of bones in the girdles and limbs 558
- 28.5 *How Biology Impacts Our Lives* Avoidance of osteoporosis requires good nutrition and exercise 559

- 28.6 Bones are composed of living tissues 560
- 28.7 Joints occur where bones meet 561
- 28.8 *How Biology Impacts Our Lives* Joint disorders can be repaired 562

Animal Movement Is Dependent on Muscle Cell Contraction 563

- 28.9 Vertebrate skeletal muscles have various functions 563
- 28.10 Skeletal muscles contract in units 564
- 28.11 *How Biology Impacts Our Lives* Exercise has many benefits 565
- 28.12 A muscle cell contains many myofibrils 566
- 28.13 Sarcomeres shorten when muscle cells contract 566
- 28.14 Axon terminals bring about muscle contraction 567
- 28.15 Muscles have three sources of ATP for contraction 568
- 28.16 Some muscle cells are fast-twitch and some are slow-twitch 568

29 Circulation and Cardiovascular Systems 572

Not All Animals Have Red Blood 572

A Circulatory System Helps Maintain Homeostasis 574

- 29.1 A circulatory system serves the needs of cells 574
- 29.2 Some invertebrates do not have a circulatory system 574
- 29.3 Other invertebrates have an open or a closed circulatory system 575
- 29.4 All vertebrates have a closed circulatory system 576

The Mammalian Cardiovascular System Consists of the Heart and Blood Vessels 577

- 29.5 The mammalian heart has four chambers 577
- 29.6 The heartbeat is rhythmic 578
- 29.7 Blood vessel structure is suited to its function 579
- 29.8 Blood vessels form two circuits in mammals 580
- 29.9 Blood pressure is essential to the flow of blood in each circuit 581
- 29.10 *How Biology Impacts Our Lives* Blood vessel deterioration results in cardiovascular disease 582
- 29.11 *How Biology Impacts Our Lives* Cardiovascular disease can often be prevented 582

Blood Has Vital Functions 584

- 29.12 Blood is a liquid tissue 584
- 29.13 Blood clotting involves platelets 585
- 29.14 *How Science Progresses* Adult stem cells include blood stem cells 586
- 29.15 Capillary exchange is vital to cells 587
- 29.16 Blood types must be matched for transfusions 588

30 Lymph Transport and Immunity 592

AIDS Destroys the Immune System 592

The Lymphatic System Functions in Transport and Immunity 594

- 30.1 Lymphatic vessels transport lymph 594
- 30.2 Lymphatic organs defend the body 595

The Body's First Line of Defense Against Disease Is Nonspecific and Innate 596

- 30.3 Barriers to entry, complement proteins, and certain blood cells are first responders 596
- 30.4 *How Biology Impacts Our Lives* A fever can be beneficial 597
- 30.5 The inflammatory response is a localized response to invasion 598

The Body's Second Line of Defense Against Disease Is Specific to the Pathogen 599

- 30.6 The second line of defense targets specific antigens 599
- 30.7 Specific immunity can be active or passive 599
- 30.8 Lymphocytes are directly responsible for specific defenses 600
- 30.9 Antibody-mediated immunity involves B cells 601
- 30.10 Cell-mediated immunity involves several types of T cells 602
- 30.11 *How Biology Impacts Our Lives* Monoclonal antibodies have many uses 604

Abnormal Immune Responses Can Have Health Consequences 605

- 30.12 Tissue rejection makes transplanting organs difficult 605
- 30.13 Autoimmune disorders are long-term illnesses 605
- 30.14 *How Biology Impacts Our Lives* Allergic reactions can be debilitating and even fatal 606

31 Digestive Systems and Nutrition 610

How to Tell a Carnivore from an Herbivore 610

Animals Must Obtain and Process Their Food 612

- 31.1 A digestive system carries out ingestion, digestion, absorption, and elimination 612
- 31.2 Animals exhibit a variety of feeding strategies 613
- 31.3 A complete digestive tract has specialized compartments 614
- 31.4 Both mechanical and chemical digestion occur in the mouth 616
- 31.5 The esophagus conducts food to the stomach 617
- 31.6 Food storage and chemical digestion take place in the stomach 618
- 31.7 *How Biology Impacts Our Lives* Bacteria contribute to the cause of ulcers 618
- 31.8 In the small intestine, chemical digestion concludes, and absorption of nutrients occurs 619

- 31.9 The pancreas and the liver contribute to chemical digestion 620
- 31.10 The stomach and duodenum are endocrine glands 621
- 31.11 The large intestine absorbs water and prepares wastes for elimination 621

Good Nutrition and Diet Lead to Better Health 622

- 31.12 Carbohydrates are nutrients that provide immediate energy as well as fiber 622
- 31.13 Lipids are nutrients that supply long-term energy 623
- 31.14 Proteins are nutrients that supply building blocks for cells 623
- 31.15 Minerals have various roles in the body 624
- 31.16 Vitamins help regulate metabolism 625
- 31.17 *How Biology Impacts Our Lives* Nutritional labels allow evaluation of a food's content 626
- 31.18 *How Biology Impacts Our Lives* Certain disorders are associated with obesity 626
- 31.19 *How Biology Impacts Our Lives* Eating disorders appear to have a psychological component 628

32 Gas Exchange and Transport in Animals 632

Free-Diving Is Dangerous 632

Animals Have Gas-Exchange Surfaces 634

- 32.1 Respiration involves several steps 634
- 32.2 External respiration surfaces must be moist 634
- 32.3 Gills are an efficient gas-exchange surface in water 636
- 32.4 The tracheal system in insects permits direct gas exchange 637
- 32.5 The human respiratory system utilizes lungs as a gas-exchange surface 638
- 32.6 *How Biology Impacts Our Lives* Questions about tobacco, smoking, and health 639

Ventilation Precedes Transport 640

- 32.7 Breathing brings air into and out of the lungs 640
- 32.8 Our breathing rate can be modified 641
- 32.9 External and internal respiration require no energy 642
- 32.10 Hemoglobin is involved in transport of gases 643
- 32.11 *How Biology Impacts Our Lives* Respiratory disorders have resulted from breathing 9/11 dust 644

33 Osmoregulation and Excretion 648

Do Coral Reef Animals Regulate? 648

Metabolic Waste Products Have Different Advantages 650

- 33.1 The nitrogenous waste product of animals varies according to the environment 650

- 33.2 Many invertebrates have organs of excretion 651

Osmoregulation Varies According to the Environment 652

- 33.3 Aquatic vertebrates have adaptations to maintain the water-salt balance of their bodies 652
- 33.4 Terrestrial vertebrates have adaptations to maintain the water-salt balance of their bodies 653

The Kidney Is an Organ of Homeostasis 654

- 33.5 The kidneys are a part of the urinary system 654
- 33.6 The mammalian kidney contains many tubules 654
- 33.7 Urine formation requires three steps 656
- 33.8 *How Biology Impacts Our Lives* Urinalysis can detect drug use 657
- 33.9 The kidneys concentrate urine to maintain water-salt balance 658
- 33.10 Lungs and kidneys maintain acid-base balance 659
- 33.11 *How Science Progresses* The artificial kidney machine makes up for faulty kidneys 660
- 33.12 *How Biology Impacts Our Lives* Dehydration and water intoxication occur in humans 660

34 Coordination by Hormone Signaling 664

Pheromones Among Us 664

The Endocrine System Utilizes Chemical Signals 666

- 34.1 The endocrine and nervous systems work together 666
- 34.2 Hormones affect cellular metabolism 667
- 34.3 The vertebrate endocrine system includes diverse hormones 668

The Hypothalamus and Pituitary Are Central to the Endocrine System 670

- 34.4 The hypothalamus is a part of the nervous and endocrine systems 670
- 34.5 The anterior pituitary produces nontropic and tropic hormones 671

Hormones Regulate Metabolism and Homeostasis 672

- 34.6 The adrenal glands respond to stress 672
- 34.7 *How Biology Impacts Our Lives* Glucocorticoid therapy can lead to Cushing syndrome 673
- 34.8 The pancreas regulates the blood sugar level 674
- 34.9 *How Biology Impacts Our Lives* Diabetes is becoming a very common ailment 674
- 34.10 The pineal gland is involved in biorhythms 675
- 34.11 The thyroid regulates development and increases the metabolic rate 676
- 34.12 The thyroid and the parathyroids regulate the blood calcium level 676

35 Reproduction and Development 680

How to Do It on Land 680

Reproduction in Animals Is Varied 682

- 35.1 Both asexual and sexual reproduction occur among animals 682
- 35.2 Development in water and on land occurs among animals 683

Humans Are Adapted to Reproducing on Land 684

- 35.3 Testes are male gonads 684
- 35.4 Production of sperm and male sex hormones occurs in the testes 685
- 35.5 Ovaries are female gonads 686
- 35.6 Production of oocytes and female sex hormones occurs in the ovaries 687
- 35.7 The ovarian cycle drives the uterine cycle 688
- 35.8 *How Biology Impacts Our Lives* Sexual activity can transmit disease 689
- 35.9 *How Biology Impacts Our Lives* Numerous birth control methods are available 690
- 35.10 *How Biology Impacts Our Lives* Reproductive technologies are available to help the infertile 691

Vertebrates Have Similar Early Developmental Stages and Processes 692

- 35.11 Cellular stages of development precede tissue stages 692
- 35.12 Tissue stages of development precede organ stages 693
- 35.13 Organ stages of development occur after tissue stages 694
- 35.14 Cellular differentiation begins with cytoplasmic segregation 695
- 35.15 Morphogenesis involves induction also 696

Human Development Is Divided into Embryonic Development and Fetal Development 697

- 35.16 Extraembryonic membranes are critical to human development 697
- 35.17 Embryonic development involves tissue and organ formation 698
- 35.18 Fetal development involves refinement and weight gain 700
- 35.19 Pregnancy ends with the birth of the newborn 702

Biological Viewpoints Animals Are Homeostatic 706

- 36.3 The growth rate results in population size changes 712
- 36.4 Survivorship curves illustrate age-related changes 712
- 36.5 Age structure diagrams divide a population into age groupings 713
- 36.6 Patterns of population growth can be described graphically 714

Environmental Interactions Influence

Population Size 715

- 36.7 Density-independent factors affect population size 715
- 36.8 Density-dependent factors affect large populations more 716

The Life History Pattern Can Predict Extinction 717

- 36.9 Life history patterns consider several population characteristics 717
- 36.10 Certain species are more apt to become extinct than others 718

Human Populations Vary Between Overpopulation and Overconsumption 719

- 36.11 World population growth is exponential 719
- 36.12 Age distributions in MDCs and LDCs are different 720

37 Behavioral Ecology 724

For the Benefit of All 724

Both Innate and Learned Behavior Can Be Adaptive 726

- 37.1 Inheritance influences behavior 726
- 37.2 Learning can also influence behavior 728
- 37.3 Associative learning links behavior to stimuli 729

Reproductive Behavior Can Also Be Adaptive 730

- 37.4 Sexual selection can influence mating and other behaviors 730

Social Behavior Can Increase Fitness 732

- 37.5 Sociobiology studies the adaptive value of societies 732

Modes of Communication Vary with the Environment 734

- 37.6 Communication with others involves the senses 734
- 37.7 *How Science Progresses* Do animals have emotions? 736

38 Community and Ecosystem Ecology 740

Ridding the Land of Waste 740

A Community Contains Several Interacting Populations in the Same Locale 742

- 38.1 Competition can lead to resource partitioning 742
- 38.2 Predator-prey interactions affect both populations 744
- 38.3 Parasitism benefits one population at another's expense 746

PART VI Organisms Live in Ecosystems 708

36 Population Ecology 708

When a Population Grows Too Large 708

Ecology Studies Where and How Organisms Live in the Biosphere 710

- 36.1 Ecology is studied at various levels 710
- Populations Are Not Static—They Change Over Time 711**
- 36.2 Density and distribution are aspects of population structure 711

- 38.4 Commensalism benefits only one population 746
- 38.5 *How Science Progresses* Coevolution requires interaction between two species 747
- 38.6 Mutualism benefits both populations 748
- A Community Develops and Changes Over Time 749**
- 38.7 *How Science Progresses* The study of island biogeography pertains to biodiversity 749
- 38.8 During ecological succession, community composition and diversity change 750
- An Ecosystem Is a Community Interacting with the Physical Environment 752**
- 38.9 Ecosystems have biotic and abiotic components 752
- 38.10 Energy flow and chemical cycling characterize ecosystems 753
- 38.11 Energy flow involves food webs 754
- 38.12 Ecological pyramids are based on trophic levels 755
- 38.13 Chemical cycling includes reservoirs, exchange pools, and the biotic community 756
- 38.14 The phosphorus cycle is sedimentary 756
- 38.15 The nitrogen cycle is gaseous 757
- 38.16 The carbon cycle is gaseous 758

39 Major Ecosystems of the Biosphere 762

Life Under Glass 762

On Land, the Biosphere Is Organized into Terrestrial Ecosystems 764

- 39.1 Major terrestrial ecosystems are characterized by particular climates 764
- 39.2 The tundra is cold and dark much of the year 765
- 39.3 Coniferous forests are dominated by gymnosperms 765
- 39.4 Temperate deciduous forests have abundant life 766
- 39.5 Temperate grasslands have extreme seasons 766
- 39.6 Savannas have wet-dry seasons 767
- 39.7 Deserts have very low annual rainfall 767
- 39.8 Tropical rain forests are warm with abundant rainfall 768
- 39.9 Solar radiation and winds influence climate 769
- 39.10 Topography and other effects also influence climate 770

Fresh Water and Salt Water Are Organized into Aquatic Ecosystems 771

- 39.11 Fresh water flows into salt water 771
- 39.12 Marine ecosystems include those of the coast and the ocean 772

- 39.13 Ocean currents affect climates 774
- 39.14 El Niño–Southern Oscillation alters weather patterns 774

40 Conservation of Biodiversity 778

Trouble in Paradise 778

Conservation Biology Focuses on Understanding and Protecting Biodiversity 780

- 40.1 Conservation biology is a practical science 780
- 40.2 Biodiversity is more than counting the total number of species 780

Biodiversity Has Direct Value and Indirect Value for Human Beings 782

- 40.3 The direct value of biodiversity is becoming better recognized 782
- 40.4 The indirect value of biodiversity is immense 784

The Causes of Today's Extinctions Are Known 785

- 40.5 Habitat loss is a major cause of wildlife extinctions 785
- 40.6 Introduction of alien species contributes to extinctions 786
- 40.7 Pollution contributes to extinctions 787
- 40.8 Overexploitation contributes to extinctions 787
- 40.9 Disease contributes to extinctions 788

Conservation Techniques Require Much Effort and Expertise 789

- 40.10 Habitat preservation is of primary importance 789
- 40.11 Habitat restoration is sometimes necessary 790

Biological Viewpoints Organisms Live in Ecosystems 794
