

CONTENTS

About the Authors iii

Preface iv

Part One Introduction to Microbiology

1 The Evolution of Microorganisms and Microbiology 1

- 1.1 Members of the Microbial World 2
- 1.2 Microbial Evolution 5
- 1.3 Microbiology and Its Origins 13
- 1.4 Microbiology Today 20

2 The Study of Microbial Structure: Microscopy and Specimen Preparation 25

- 2.1 Lenses and the Bending of Light 26
- 2.2 Light Microscopes 26
- 2.3 Preparation and Staining of Specimens 35
- 2.4 Electron Microscopy 38
- 2.5 Scanning Probe Microscopy 43

3 Bacteria and Archaea 46

- 3.1 Prokaryotes 47
- 3.2 Common Features of Bacterial and Archaeal Cell Structure 47
- 3.3 Bacterial Cell Envelopes 52
- 3.4 Archaeal Cell Envelopes 63
- 3.5 Cytoplasm of Bacteria and Archaea 65
- 3.6 External Structures 73
- 3.7 Motility and Chemotaxis 76
- 3.8 Bacterial Endospores 81

4 Eukaryotic Cell Structure and Function 88

- 4.1 Common Features of Eukaryotic Cells 89
- 4.2 Eukaryotic Cell Envelopes 90
- 4.3 Cytoplasm of Eukaryotes 92
- 4.4 Organelles of the Secretory and Endocytic Pathways 93
- 4.5 Organelles Involved in Genetic Control of the Cell 97
- 4.6 Organelles Involved in Energy Conservation 99
- 4.7 External Structures 103
- 4.8 Comparison of Bacterial, Archaeal, and Eukaryotic Cells 105
- 4.9 Overview of Protist Structure and Function 105
- 4.10 Overview of Fungal Structure and Function 108

5 Viruses and Other Acellular Infectious Agents 114

- 5.1 Viruses 115
- 5.2 Structure of Viruses 115
- 5.3 Viral Multiplication 121
- 5.4 Types of Viral Infections 126
- 5.5 Cultivation and Enumeration of Viruses 129
- 5.6 Viroids and Virusoids 132
- 5.7 Prions 133

Part Two Microbial Nutrition, Growth, and Control

6 Microbial Nutrition 137

- 6.1 Elements of Life 138
- 6.2 Carbon, Hydrogen, Oxygen, and Electrons 138
- 6.3 Nutritional Types of Microorganisms 139
- 6.4 Nitrogen, Phosphorus, and Sulfur 141
- 6.5 Growth Factors 141
- 6.6 Uptake of Nutrients 142
- 6.7 Culture Media 146
- 6.8 Isolation of Pure Cultures 150

7 Microbial Growth 155

- 7.1 Reproductive Strategies 156
- 7.2 Bacterial Cell Cycle 158
- 7.3 Growth Curve 163
- 7.4 Measurement of Microbial Growth 168
- 7.5 Continuous Culture of Microorganisms 172
- 7.6 Influences of Environmental Factors on Growth 173
- 7.7 Microbial Growth in Natural Environments 183

8 Control of Microorganisms in the Environment 190

- 8.1 Definitions of Frequently Used Terms 193
- 8.2 The Pattern of Microbial Death 193
- 8.3 Conditions Influencing the Effectiveness of Antimicrobial Agents 194
- 8.4 Physical Control Methods 195
- 8.5 Chemical Control Agents 199
- 8.6 Evaluation of Antimicrobial Agent Effectiveness 204
- 8.7 Biological Control of Microorganisms 205

Part Three Microbial Metabolism

9 Introduction to Metabolism	208
9.1 Microbial Metabolism and Its Importance	209
9.2 Thermodynamics	210
9.3 Free Energy and Reactions	211
9.4 ATP	212
9.5 Oxidation-Reduction Reactions	213
9.6 Electron Transport Chains	214
9.7 Enzymes	217
9.8 Ribozymes	222
9.9 Regulation of Metabolism	222
9.10 Posttranslational Regulation of Enzyme Activity	223
10 Catabolism: Energy Release and Conservation	228
10.1 Chemoorganotrophic Fueling Processes	229
10.2 Aerobic Respiration	231
10.3 Glycolytic Pathways	231
10.4 Tricarboxylic Acid Cycle	236
10.5 Electron Transport and Oxidative Phosphorylation	236
10.6 Anaerobic Respiration	244
10.7 Fermentation	245
10.8 Catabolism of Other Carbohydrates	248
10.9 Lipid Catabolism	249
10.10 Protein and Amino Acid Catabolism	250
10.11 Chemolithotrophy	250
10.12 Phototrophy	254
11 Anabolism: The Use of Energy in Biosynthesis	264
11.1 Principles Governing Biosynthesis	265
11.2 Precursor Metabolites	266
11.3 CO ₂ Fixation	268
11.4 Synthesis of Sugars and Polysaccharides	270
11.5 Synthesis of Amino Acids	273
11.6 Synthesis of Purines, Pyrimidines, and Nucleotides	278
11.7 Lipid Synthesis	283

Part Four Microbial Molecular Biology and Genetics

12 Genes: Structure, Replication, and Expression	288
12.1 DNA as Genetic Material	289
12.2 Flow of Genetic Information	292
12.3 Nucleic Acid and Protein Structure	293
12.4 DNA Replication	297
12.5 Gene Structure	305
12.6 Transcription	308
12.7 The Genetic Code	314
12.8 Translation	316
12.9 Protein Maturation and Secretion	323
13 Microbial Genetics: Regulation of Gene Expression	331
13.1 Levels of Regulation	332
13.2 Regulation of Transcription Initiation	332
13.3 Regulation of Transcription Elongation	342
13.4 Regulation of Translation	345
13.5 Posttranslational Regulation	346
13.6 Global Regulatory Systems	349
13.7 Regulation of Gene Expression in <i>Eukarya</i> and <i>Archaea</i>	358
14 Microbial Genetics: Mechanisms of Genetic Variation	363
14.1 Mutations: Their Chemical Basis and Effects	364
14.2 Detection and Isolation of Mutants	369
14.3 DNA Repair	371
14.4 Creating Genetic Variability	374
14.5 Transposable Elements	376
14.6 Bacterial Plasmids	378
14.7 Bacterial Conjugation	381
14.8 Bacterial Transformation	387
14.9 Transduction	389
15 Recombinant DNA Technology	397
15.1 Key Developments in Recombinant DNA Technology	398
15.2 Polymerase Chain Reaction	404
15.3 Gel Electrophoresis	406
15.4 Cloning Vectors and Creating Recombinant DNA	406

CONTENTS

15.5	Construction of Genomic Libraries	412	20	Bacteria: The Proteobacteria	514
15.6	Introducing Recombinant DNA into Host Cells	412	20.1	Class <i>Alphaproteobacteria</i>	515
15.7	Expressing Foreign Genes in Host Cells	414	20.2	Class <i>Betaproteobacteria</i>	524
16	Microbial Genomics	419	20.3	Class <i>Gammaproteobacteria</i>	528
16.1	Determining DNA Sequences	420	20.4	Class <i>Deltaproteobacteria</i>	541
16.2	Genome Sequencing	424	20.5	Class <i>Epsilonproteobacteria</i>	547
16.3	Bioinformatics	426	21	Bacteria: The Low G + C Gram Positives	551
16.4	Functional Genomics	427	21.1	Class <i>Mollicutes</i> (The Mycoplasmas)	551
16.5	Proteomics	433	21.2	Class <i>Clostridia</i>	555
16.6	Systems Biology	436	21.3	Class <i>Bacilli</i>	559
16.7	Comparative Genomics	436	22	Bacteria: The High G + C Gram Positives	568
16.8	Metagenomics	441	22.1	General Properties of the Actinomycetes	568
Part Five The Diversity of the Microbial World			22.2	Suborder <i>Actinomycineae</i>	572
17	Microbial Taxonomy and the Evolution of Diversity	446	22.3	Suborder <i>Micrococcineae</i>	573
17.1	Introduction to Microbial Taxonomy	447	22.4	Suborder <i>Corynebacterineae</i>	574
17.2	Taxonomic Ranks	448	22.5	Suborder <i>Micromonosporineae</i>	576
17.3	Techniques for Determining Microbial Taxonomy and Phylogeny	449	22.6	Suborder <i>Propionibacterineae</i>	576
17.4	Phylogenetic Trees	456	22.7	Suborder <i>Streptomycineae</i>	576
17.5	Evolutionary Processes and the Concept of a Microbial Species	459	22.8	Suborder <i>Streptosporangineae</i>	578
17.6	<i>Bergey's Manual of Systematic Bacteriology</i>	465	22.9	Suborder <i>Frankineae</i>	579
18	The Archaea	473	22.10	Order <i>Bifidobacteriales</i>	579
18.1	Overview of the Archaea	473	23	The Protists	582
18.2	Phylum <i>Crenarchaeota</i>	482	23.1	Introduction	584
18.3	Phylum <i>Euryarchaeota</i>	485	23.2	Supergroup <i>Excavata</i>	584
19	Bacteria: The Deinococci & Nonproteobacteria Gram Negatives	495	23.3	Supergroup <i>Amoebozoa</i>	586
19.1	<i>Aquificae</i> and <i>Thermotogae</i>	496	23.4	Supergroup <i>Rhizaria</i>	590
19.2	<i>Deinococcus-Thermus</i>	496	23.5	Supergroup <i>Chromalveolata</i>	591
19.3	Photosynthetic Bacteria	497	23.6	Supergroup <i>Archaeplastida</i>	598
19.4	Phylum <i>Planctomycetes</i>	505	24	The Fungi (Eumycota)	602
19.5	Phylum <i>Chlamydiae</i>	506	24.1	Fungal Distribution and Importance	605
19.6	Phylum <i>Spirochaetes</i>	507	24.2	<i>Chytridiomycota</i>	605
19.7	Phylum <i>Bacteroidetes</i>	509	24.3	<i>Zygomycota</i>	606
19.8	Phylum <i>Verrucomicrobia</i>	511	24.4	<i>Glomeromycota</i>	607
			24.5	<i>Ascomycota</i>	608
			24.6	<i>Basidiomycota</i>	612
			24.7	<i>Microsporidia</i>	613
			25	The Viruses	616
			25.1	Virus Taxonomy and Phylogeny	617

25.2	Viruses with Double-Stranded DNA Genomes (Group I)	618
25.3	Viruses with Single-Stranded DNA Genomes (Group II)	630
25.4	Viruses with Double-Stranded RNA Genomes (Group III)	633
25.5	Viruses with Plus-Strand RNA Genomes (Group IV)	634
25.6	Viruses with Minus-Strand RNA Genomes (Group V)	636
25.7	Viruses with Single-Stranded RNA Genomes (Group VI-Retroviruses)	637
25.8	Viruses with Gapped DNA Genomes (Group VII)	640

Part Six Ecology and Symbiosis

26	Biogeochemical Cycling	644
26.1	Biogeochemical Cycling	645
26.2	Global Climate Change	653
27	Methods in Microbial Ecology	658
27.1	Culturing Techniques	659
27.2	Assessing Microbial Diversity	662
27.3	Assessing Microbial Community Activity	668
28	Microorganisms in Marine and Freshwater Ecosystems	673
28.1	Water as a Microbial Habitat	674
28.2	Microorganisms in Marine Ecosystems	677
28.3	Microorganisms in Freshwater Ecosystems	686
29	Microorganisms in Terrestrial Ecosystems	692
29.1	Soils as a Microbial Habitat	693
29.2	Microorganisms in the Soil Environment	696
29.3	Microorganism Associations with Vascular Plants	698
29.4	The Subsurface Biosphere	709
30	Microbial Interactions	713
30.1	Microbial Interactions	714
30.2	Human-Microbe Interactions	728
30.3	Normal Microbiota of the Human Body	731

Part Seven Pathogenicity and Host Response

31	Infection and Pathogenicity	739
31.1	Host-Parasite Relationships	740
31.2	The Infectious Disease Process	740
31.3	Virulence	748
32	Nonspecific (Innate) Host Resistance	760
32.1	Host Resistance Overview	761
32.2	Physical Barriers in Nonspecific (Innate) Resistance	762
32.3	Chemical Mediators in Nonspecific (Innate) Resistance	764
32.4	Cells, Tissues, and Organs of the Immune System	772
32.5	Phagocytosis	781
32.6	Inflammation	784
33	Specific (Adaptive) Immunity	789
33.1	Overview of Specific (Adaptive) Immunity	790
33.2	Antigens	791
33.3	Types of Specific Immunity	793
33.4	Recognition of Foreignness	794
33.5	T-Cell Biology	797
33.6	B-Cell Biology	801
33.7	Antibodies	803
33.8	Action of Antibodies	812
33.9	Acquired Immune Tolerance	814
33.10	Immune Disorders	815

Part Eight Microbial Diseases, Detection, and Their Control

34	Antimicrobial Chemotherapy	826
34.1	The Development of Chemotherapy	827
34.2	General Characteristics of Antimicrobial Drugs	828
34.3	Determining the Level of Antimicrobial Activity	830
34.4	Antibacterial Drugs	832
34.5	Antifungal Drugs	838
34.6	Antiviral Drugs	839

CONTENTS

34.7	Antiprotozoan Drugs	842	39.3	Arthropod-Borne Diseases	987
34.8	Factors Influencing Antimicrobial Drug Effectiveness	843	39.4	Direct Contact Diseases	993
34.9	Drug Resistance	843	39.5	Food-Borne and Waterborne Diseases	999
35	Clinical Microbiology and Immunology	850	39.6	Opportunistic Diseases	1002
35.1	Overview of the Clinical Microbiology Laboratory	851	Part Nine Applied Microbiology		
35.2	Identification of Microorganisms from Specimens	853	40	Microbiology of Food	1009
35.3	Clinical Immunology	863	40.1	Microbial Growth and Food Spoilage	1009
36	Epidemiology and Public Health Microbiology	873	40.2	Controlling Food Spoilage	1012
36.1	Epidemiology	874	40.3	Types of Food-Borne Disease	1015
36.2	Epidemiological Methods	876	40.4	Detection of Food-Borne Pathogens	1018
36.3	Measuring Infectious Disease Frequency	878	40.5	Microbiology of Fermented Foods	1020
36.4	Patterns of Infectious Disease in a Population	878	40.6	Microorganisms as Foods and Food Amendments	1029
36.5	Emerging and Reemerging Infectious Diseases and Pathogens	881	41	Industrial Microbiology	1032
36.6	Nosocomial Infections	884	41.1	Microorganisms Used in Industrial Microbiology	1033
36.7	Control of Epidemics	886	41.2	Growing Microbes in Industrial Settings	1039
36.8	Bioterrorism Preparedness	890	41.3	Major Products of Industrial Microbiology	1040
36.9	Global Health Considerations	893	41.4	Agricultural Biotechnology	1045
37	Human Diseases Caused by Viruses and Prions	897	41.5	Microbes as Products	1047
37.1	Airborne Diseases	898	42	Applied Environmental Microbiology	1051
37.2	Arthropod-Borne Diseases	908	42.1	Water Purification and Sanitary Analysis	1052
37.3	Direct Contact Diseases	909	42.2	Wastewater Treatment	1057
37.4	Food-Borne and Waterborne Diseases	922	42.3	Biodegradation and Bioremediation by Natural Communities	1064
37.5	Zoonotic Diseases	924	42.4	Bioaugmentation	1068
37.6	Prion Diseases	929	Appendix I	A Review of the Chemistry of Biological Molecules	A1
38	Human Diseases caused by Bacteria	932	Appendix 2	Common Metabolic Pathways	A9
38.1	Airborne Diseases	933	Appendix 3	Concept Mapping	A16
38.2	Arthropod-Borne Diseases	944	Glossary	G-1	
38.3	Direct Contact Diseases	949	Credits	C-1	
38.4	Food-Borne and Waterborne Diseases	964	Index	I-1	
38.5	Zoonotic Diseases	973			
38.6	Opportunistic Diseases	975			
39	Human Diseases Caused by Fungi and Protists	982			
39.1	Pathogenic Fungi and Protists	982			
39.2	Airborne Diseases	983
