Posttranscriptional Mechanisms Regulating the Inflammatory Response

Georg Stoecklin and Paul Anderson

Abstract	1
1. Coordinate Regulation of Pro-Inflammatory Proteins	1
2. Control of mRNA Stability	5
3. Translational Inhibition	16
4. Animal Models	19
5. Clinical Significance	23
6. Conclusions	25
References	26

Negative Signaling in Fc Receptor Complexes

Marc Daëron and Renaud Lesourne

Abstract	39
1. Fc Receptors	40
2. Positive Signaling by Activating FcRs	44
3. Negative Signaling by Activating FcRs	50
4. Negative Signaling by Inhibitory FcRs	60
5. Conclusion	70
References	74

12. Evidence that Antibodies Are Involved in NPSLE in Patients	308
13. Anti-Peptide Antibody Activates Prolactin Secretion	309
14. Anti-Peptide Antibodies and Manifestations of NP-SLE	310
15. Implications for SLE	310
16. Implications for Human Pathobiology	311
References	311

Immunodeficiencies with Autoimmune Consequences

Luigi D. Notarangelo, Eleonora Gambineri, and Raffaele Badolato

Abstract	321
1. Autoimmune Manifestations in Primary Immune Deficiencies: Relevance and Mechanisms	322
2. AIRE, Central Tolerance, and the Pathophysiology of Autoimmune Polyendocrinopathy	324
3. Defective AIRE Expression Explains the Pathophysiology of Autoimmunity in Omenn Syndrome	337
4. CD4 ⁺ CD25 ⁺ Regulatory T Cells and the Pathophysiology of IPEX (Immunodysregulation – Polyendocrinopathy – Enteropathy – X-Linked)	346
5. Concluding Remarks	357
References	359
