A Reappraisal of Humoral Immunity Based on Mechanisms of Antibody-Mediated Protection Against Intracellular Pathogens

Arturo Casadevall and Liise-anne Pirofski

Abstract	1
1. Introduction	2
2. Intracellular and Extracellular Pathogenic Microbes: How Distinct Are They?	3
3. Components of AMI	6
4. AMI in the Context of the "Damage-Response Framework"	9
5. Abs as Enhancers of Innate Immunity	14
6. Abs as Direct and Indirect Effector Molecules	15
7. AMI as a Regulator of the Inflammatory Response	18
8. Dose-Response Conundrum	22
9. Ab-Mediated Protection Against Intracellular Pathogens	23
10. Protective Efficacy of an Ab Molecule	30
11. Some Emerging Concepts	31

Accessibility Control of V(D)J Recombination

Robin Milley Cobb, Kenneth J. Oestreich, Oleg A. Osipovich, and Eugene M. Oltz

Abstract	45
1. Introduction	46
2. V(D)J Recombination: A Mechanistic Perspective	47
3. Genomic Architecture of Ig and TCR Loci	51

4. Regulation of Antigen Receptor Gene Assembly During Lymphocyte Development	53
5. Regulation of V(D)J Recombination: The Accessibility Hypothesis and Beyond	57
6. Chromatin Structure and Accessibility Control Mechanisms	59
7. Regulation of Antigen Receptor Loci by Nuclear Topography	64
8. Regulation of Chromatin Accessibility and V(D)J Recombination by <i>Cis</i> -Acting Elements	66
9. Role of Transcription in Accessibility Control of V(D)J Recombination	75
10. Transcription Factors Involved in Accessibility Control of Ig and TCR Loci	76
11. Control of Recombinase Accessibility by Chromatin Modifications and Remodeling	86
12. Concluding Remarks	91
References	93

Targeting Integrin Structure and Function in Disease

Donald E. Staunton, Mark L. Lupper, Robert Liddington, and W. Michael Gallatin

Abstract	111
1. Introduction	112
2. Structure, Ligand-Binding Sites, and Competitive Antagonists	117
3. Large Conformational Changes and Affinity States	119
4. I-Domain Allosteric Site and Antagonists	121
5. An Internal Ligand	124
6. β I-Domain Allosteric Regulation	126
7. The PSI- and EGF-Domain Restraints	127
8. The Cytoplasmic Domain Restraint	127
9. Therapeutics	128
10. Concluding Remarks	143
References	144

Endogenous TLR Ligands and Autoimmunity

Hermann Wagner

Abstract	159
1. Introduction (Short Overview on TLR Immunobiology)	159
2. The Innate: Adaptive Immune Connection	163

3. TLR-Mediated Immunostimulatory Potential of Self-RNA and -DNA	163
4. Function of IFN- α/β	164
5. Cytokine-Driven DC Activation: A Portal for Autoimmunity?	165
6. TLRs and Autoimmunity	166
7. TLRs and "Innate Autoimmunity"	167
References	168

Genetic Analysis of Innate Immunity

Kasper Hoebe, Zhengfan Jiang, Koichi Tabeta, Xin Du,
Philippe Georgel, Karine Crozat, and Bruce Beutler

Abstract	175
1. Introduction	176
2. How Do We Detect Infection?	187
3. Forward and Reverse Genetic Analyses of TLR Signaling	195
4. TLR-Independent Detection of Microbes	205
5. Global Resistome	207
6. Endogenous Activators of TLR Signaling?	209
7. Conclusions About Innate Immunity and the Classical Genetic Approach	211
References	212

TIM Family of Genes in Immunity and Tolerance

Vijay K. Kuchroo, Jennifer Hartt Meyers, Dale T. Umetsu, and
Rosemarie H. DeKruyff

Abstract	227
1. Introduction	227
2. TIM Family of Genes	230
3. Tim-3 and Its Ligand Galectin-9 Inhibit Th1 Responses	232
4. Tim-2 and Its Ligands	236
5. Tim-1, Th2 Cells, and Asthma	238
6. Tim-4, a Natural Ligand for Tim-1	240
7. TIM Molecules in Health and Disease	242
8. TIM-1, Hepatitis A Virus Cellular Receptor, and Linkage to Human Asthma	244
References	245

Inhibition of Inflammatory Responses by Leukocyte Ig-Like Receptors

Howard R. Katz

Abstract	251
1. Introduction	251
2. LILRB1	252
3. LILRB2	258
4. LILRB3	260
5. LILRB4	260
6. LILRB5	263
7. PIR-B	263
8. Conclusions	266
References	267
